Appendix B. Message Text and Symbolic Names	B-1

Preface

The *OSF DCE Problem Determination Guide* provides a compilation of all DCE error messages and status codes along with explanations and recovery actions.

Audience

This guide is written for DCE application programmers and system and network administrators.

Applicability

This document applies to the OSF DCE Version 1.2.2 offering and related updates. See your software license for details.

Purpose

The purpose of this guide is to help programmers and administrators to interpret and act upon error messages and status codes when received.

Document Usage

The *OSF DCE Problem Determination Guide* consists of a brief Introduction and one chapter containing a listing of all error messages and status codes. This listing is alphabetical by symbolic name. There are also two appendixes: One maps error numbers to symbolic names; the other maps symbolic names to message text.

Related Documents

Problem Reporting

If you have any problems with the software or documentation, please contact your software vendor's customer service department.

Chapter 1

Introduction

The error message and status codes in the following chapter include detailed explanations and recovery actions for all DCE messages and status codes issued by the following DCE components:

- Audit
- Cell Directory Service
- Code-Set Registry Compiler
- Configuration
- DCE Control Program
- Distributed File-Access (DFA)
- Distributed File Service (DFS)
- DCE Host Daemon
- Distributed Time Service
- Generic Security Service

- Global Directory Service
- Interface Definition Language
- Pthreads
- Remote Procedure Call
- Security
- Serviceability
- DCE Threads
- Universal Unique Identifier Generator
- Utilities

All messages documented here are visible to the user, who might be a programmer, administrator, or operator.

1.1 Message Structure

Each message or code block contains several fields of information. With the exception of the Distributed File-Access (DFA), XDS, XOM, and Pthreads messages, the first field contains a unique 32-bit hex value. XDS and XOM messages are X.500 compliant. The Pthreads messages are Posix-compliant. DFA does not use DCE serviceability to display its messages, and has its own system of error codes. Consequently, none of these components' messages have error numbers or hex values. Instead, their messages contain dashes (—) in their first field in the listings in this book.

The second field contains the symbolic name for the message or code. A few Pthreads messages do not have a symbolic name. These messages contain dashes (—) in the symbolic-name field.

The symbolic name is followed by three fields containing the severity level, component, and subcomponent name (which can be absent if not applicable). The sixth field contains the text of the message. The seventh field contains an explanation of the event that generated the message. The eighth field contains a recovery action.

The following is an example of a typical DCE error message:

0x1131f08b dcp_s_cds_no_obj_mod_operation

Severity: Warning **Component:** dcp

Text: Option not specified.

Explanation: The **object modify** command requires one or more options.

Action: Retype the command with one or more of the following options: **-add**, **-remove**, or **-change**.

The content of these eight fields is self explanatory with the exception of the severity and the subcomponent fields.

1.1.1 Severity Levels

The level contained in the severity field will generally be one of the following:

Fatal	An unrecoverable error has occurred. The program usually terminates and special recovery action is required.
Error	An unexpected, nonterminal or correctable event. The program continues, but some services may not be available. It might also indicate that a request or action could not be completed.
Warning	Action has been taken that may not be the desired or requested action. For example, if a requested database was not found, the default might be used. Or it may be a warning that some possibly undesired action will take place, such as a directory that is not empty will be removed. It might also indicate that a future problem will arise if action is not taken now; for example, a printer might be low on paper.
Notice	An event has taken place that does not directly require action; for example, a process might have started as requested.
Notice Verbose	This is the same as above, but contains more detailed information.

When more than one subcomponent can return a given error message or status code, the severity level is dependent on the subcomponent or particular circumstances. In these cases, the severity field will state, "Varies".

1.1.2 Subcomponents

DCE components can consist of several subcomponents. For example, the DCE Host Daemon component consists of the following subcomponents:

- acldmgr
- xattrschema
- general
- hostdata
- rkeytab
- secval
- srvrconf
- srvrexec
- locks
- endpoint

When more than one subcomponent could issue an error message or status code, the subcomponent field states, "Varies". Otherwise, this field notes the specific subcomponent.

1.2 Message Routing With the Serviceability API

Message routing allows for the specification of where messages are sent. There are five methods for routing messages. See the **svcroute(5svc)** reference page for details on how to set the routes.

1.2.1 Using Routing Files

If a routing file is used, then the file specifies the routing based on severity levels. The destination could be one of the following:

BINFILE Messages are written as binary log entries to a file

TEXTFILE	Messages are written as human-readable text to a file
FILE	This is the equivalent of TEXTFILE
DISCARD	Messages are not recorded
STDOUT	Messages are written as human-readable text to standard output
STDERR	Messages are written as human-readable text to standard error
GOESTO	Messages are sent to the destination designated for the specified severity level

Messages of different severity levels can be routed differently. For example, all "Notices" could be discarded and all "Fatal" errors could be written to a binary log.

BINFILES can be read and manipulated with the following set of logfile functions:

`dce_svc_log_Open()` a logfile for reading.
`dce_svc_log_Get()` the next entry from the logfile.
`dce_svc_free_Entry()` the logfile space of the current entry.
`dce_svc_log_Rewind()` log processing back to the first message.
`dce_svc_log_Close()` the open logfile.

For detailed information about the logfile functions, see the reference pages.

1.2.2 Using Environment Variables

You can also route messages based on severity by using the environment variables:

- SVC_FATAL
- SVC_ERROR
- SVC_WARNING
- SVC_NOTICE
- SVC_NOTICE_VERBOSE

1.2.3 Using `dce_svc_routing`

Message routing can be set up by the application itself, by calling the `dce_svc_routing()` routine and passing to it a string formatted in the same way as a line of text from a routing file. The routine must be called for each severity level being set.

1.2.4 Using Attributes

The final two routing methods allow for limited routing. Routing can be specified by attribute, either in the message definition in the `sams` file, or as part of the argument list to `dce_svc_printf()` routine.

For additional information on the Serviceability API, see the Serviceability chapter in the Application Development Guide.

1.3 Administering the Routing State

The `log` command of the DCE control program (`dcecp`) allows you to determine the serviceability components that are registered by the server. You can also request a list of the subcomponents for each component registered. The `log` command also allows you to change the routing specifications for a server.

See the OSF DCE Command Reference for additional information.

1.4 Using This Guide

The messages and status codes found in the Problem Determination Guide are organized alphabetically by symbolic name. You may, however, only have a textual message or hex number for a message. To accommodate these situations, there are two appendixes following the alphabetical listing. One maps the hex numbers to symbolic names and the other maps symbolic names to textual messages. You can

use these two mappings to find the symbolic name for a given textual message or hex number and then look up the symbolic name in the alphabetical listing.

Chapter 2

Error Messages and Status Codes

Severity: Notice **Component:** Threads

Text: Asynchronous or General cancelability was off.

Explanation: A successful attempt was made to set either asynchronous or general cancelability to off.

Action: None required.

Severity: Notice **Component:** Threads

Text: Asynchronous or General cancelability was on.

Explanation: A successful attempt was made to set either asynchronous or general cancelability to on.

Action: None required.

Severity: Notice **Component:** Threads

Text: The mutex is locked; therefore, it is not acquired.

Explanation: An attempt was made to lock a mutex using the **pthread_mutex_trylock** routine. This occurs if the mutex is locked by another thread when this routine is called. Zero (0) is returned and the thread does not wait to acquire the lock, but takes whatever action is appropriate.

Action: None required.

Severity: Notice **Component:** Threads

Text: Successful completion.

Explanation: The requested routine executed successfully. Generally, zero (0) is returned by **errno**. In some cases, the requested attribute value is returned.

Action: None required.

Severity: Notice **Component:** Threads

Text: Values of thread1 and thread2 designate the same object.

Explanation: An attempt was made to compare one thread identifier to another thread identifier using the **pthread_equal** routine.

Action: None required.

Severity: Notice **Component:** Threads

Text: Values of thread1 and thread2 do not designate the same object.

Explanation: An attempt was made to compare one thread identifier to another thread identifier using the **pthread_equal** routine.

Action: None required.

0x14601018 acl_s_bad_manager_type

Severity: Varies **Component:** lib

Text: Bad manager type parameter to `dce_acl_register_object_type()`

Explanation: The manager type passed to `dce_acl_register_object_type()` is invalid or missing.

Action: Call `dce_acl_register_object_type()` with correct parameter.

0x1460101c acl_s_group_not_allowed

Severity: Varies **Component:** lib

Text: group_obj ACL entries not allowed in this ACL

Explanation: In a `rdACL_replace` operation an attempt was made to add an ACL entry of type `sec_acl_e_type_group_obj` or `sec_acl_e_type_group_obj_deleg` to a manager that does not support object group ownership.

Action: Do not add entries of these types. To use these types, specify `dce_acl_c_has_groups` when calling `dce_acl_register_object_type()`; your ACL manager must also support groups.

0x1460101a acl_s_no_acl_entries

Severity: Varies **Component:** lib

Text: No entries in this ACL

Explanation: The ACL accessed has no entries.

Action: Be sure that the ACL has at least one entry.

0x1460101d acl_s_no_control_entries

Severity: Varies **Component:** lib

Text: No ACL entries have the control bit set.

Explanation: In a `rdACL_replace` operation an attempt was made to replace the ACL where no entries have control permission.

Action: Ensure that at least one ACL entry has control permission. Or, to avoid this check in `rdACL_replace`, set the flag `dce_acl_c_orphans_ok` when calling `dce_acl_register_object_type()`. (Use this feature with care.)

0x1460101b acl_s_owner_not_allowed

Severity: Varies **Component:** lib

Text: user_obj ACL entries not allowed in this ACL

Explanation: In a rdacl_replace operation an attempt was made to add an ACL entry of type **sec_acl_e_type_user_obj** or **sec_acl_e_type_user_obj_deleg** to a manager that does not support object users ownership.

Action: Do not add entries of these types. To use these types, specify **dce_acl_c_has_owner** when calling **dce_acl_register_object_type()**; your ACL manager must also support users/owners.

0x14601019 acl_s_type_not_registered

Severity: Varies **Component:** lib

Text: Manager type has not been registered with dce_acl_register_object_type()

Explanation: The manager type passed to a lookup or replace function was not registered by first calling **dce_acl_register_object_type()**.

Action: Call **dce_acl_register_object_type()** with proper manager type parameter before attempting the lookup or replace operation.

0x1708309f ae_tty_args_not_command

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - unknown command

Explanation: ?

Action: None required

0x17083099 ae_tty_bad_data_format

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - bad data format

Explanation: ?

Action: None required

0x1708309d ae_tty_bad_domain

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - bad domain

Explanation: ?

Action: None required

0x17083094 ae_tty_cant_parse

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - unable to parse string

Explanation: ?

Action: None required

0x1708309c ae_tty_entry_is_required

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - entry required

Explanation: ?

Action: None required

0x1708309a ae_tty_err_input_too_long

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - input too long

Explanation: ?

Action: None required

0x17083095 ae_tty_incompatible_options

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - incompatible options

Explanation: ?

Action: None required

0x1708309b ae_tty_input_out_of_range

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - input out of range

Explanation: ?

Action: None required

0x17083097 ae_tty_invalid_argument

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - invalid argument

Explanation: ?

Action: None required

0x17083096 ae_tty_invalid_option

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - invalid option

Explanation: ?

Action: None required

0x17083098 ae_tty_opt_requires_arg

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - operation requires argument

Explanation: ?

Action: None required

0x1708309e ae_tty_too_many_args

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - too many arguments

Explanation: ?

Action: None required

0x170830a0 ae_tty_would_grant_perms

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - would unintentionally grant permissions via recalculated mask

Explanation: ?

Action: None required

0x1032306a aud_s_action_bit_set

Severity: Notice **Component:** aud/aud_s_esl

Text: Audit Actions: %lx

Explanation: Lists Audit actions.

Action: None required.

0x10323068 aud_s_cannot_allocate_memory

Severity: Error **Component:** aud/aud_s_general

Text: Cannot allocate %d bytes memory

Explanation: The **malloc()** call failed.

Action: Report to your system administrator for resolution.

0x10323034 aud_s_cannot_audit

Severity: Error **Component:** aud/aud_s_general

Text: Audit commit failed

Explanation: An attempt to commit to the Audit record failed. This may be because the audit trail is full.

Action: Backup and empty the audit trail.

0x10323031 aud_s_cannot_authenticate

Severity: Notice **Component:** aud/aud_s_general

Text: Client RPC binding contains invalid authentication information

Explanation: The call **rpc_binding_inq_auth_client()** failed.

Action: Check the RPC return code and act accordingly.

0x10323033 aud_s_cannot_getgmtime

Severity: Error **Component:** aud/aud_s_general

Text: The audit library could not backup a trail file due to failure of utc_gmtime call for reading time from the system.

Explanation: The call **utc_gmtime()** failed.

Action: Check the reason why the call utc_gmtime failed and act accordingly.

0x10323032 aud_s_cannot_gettime

Severity: Error **Component:** aud/aud_s_general

Text: The audit library could not backup a trail file due to failure of utc_gettime call for reading time from the system.

Explanation: The call **utc_gettime()** failed.

Action: Check the reason why the call utc_gettime failed and act accordingly.

0x10323084 aud_s_cannot_init_trail_mutex

Severity: Error **Component:** aud/aud_s_trl

Text: Cannot initialize the mutex for the audit trail.

Explanation: The **pthread_mutex_init()** call failed.

Action: Check the return code of the **pthread_mutex_init()** call.

0x10323078 aud_s_cannot_mkdir

Severity: Error **Component:** aud/aud_s_esl

Text: Cannot make %s directory

Explanation: An attempt to create the indicated directory failed.

Action: Make sure that the Audit client has the appropriate permissions to create the directory.

0x10323075 aud_s_cannot_open_dmn_binding_file

Severity: Error **Component:** aud/aud_s_general

Text: Cannot open audit daemon's binding file

Explanation: This can either be due to a file permission problem or the Audit daemon is not running.

Action: Check if the file exists. If the file exists, check the file's permissions. If the file does not exist, make sure that the Audit daemon is running.

0x10323076 aud_s_cannot_open_dmn_identity_file

Severity: Error **Component:** aud/aud_s_general

Text: Cannot open Audit daemon's identity file

Explanation: This can either be due to a file permission problem or the Audit daemon is not running.

Action: Start the Audit daemon.

0x10323072 aud_s_cannot_open_event_class_dir

Severity: Error **Component:** aud/aud_s_general

Text: Cannot open event class directory %s to read.

Explanation: An attempt to open the indicated event class directory failed. You must have read and execute permissions to this directory.

Action: Set the proper permissions to the directory and retry the operation.

0x10323071 aud_s_cannot_open_event_class_file

Severity: Error **Component:** aud/aud_s_general

Text: Cannot open event class file %s to read.

Explanation: An attempt to open the indicated event class file failed. You must have read permission to the file.

Action: Check the file permissions and ensure that you have read permission to the file. Then, retry the operation.

0x1032307a aud_s_cannot_open_trail_file

Severity: Error **Component:** aud/aud_s_general

Text: Cannot open trail file %s

Explanation: An attempt to open the indicated trail file failed.

Action: Check that the file exists. Check that you have the required permissions to open the file, and retry the operation.

0x10323079 aud_s_cannot_open_trail_file_rc

Severity: Error **Component:** aud/aud_s_general

Text: Cannot open trail file

Explanation: An attempt to open the indicated trail file failed.

Action: Check that the file exists. Check that you have the required permissions to open the file, and retry the operation.

0x10323069 aud_s_cannot_read_file

Severity: Notice **Component:** aud/aud_s_esl

Text: Cannot read file %s in buffer

Explanation: The file cannot be read in the buffer.

Action: Report the problem to OSF.

0x10323050 aud_s_cannot_reopen_trail_file

Severity: Error **Component:** aud/aud_s_trl

Text: Cannot reopen %s

Explanation: Internally, the audit trail file was being reopened and the reopen failed.

Action: Report the problem to OSF.

0x1032304f aud_s_cannot_reopen_trail_file_rc

Severity: Error **Component:** aud/aud_s_trl

Text: Cannot reopen audit trail file

Explanation: Internally, the audit trail file was being reopened and the reopen failed.

Action: Report the problem to OSF.

0x10323052 aud_s_cannot_reopen_trail_index_file

Severity: Error **Component:** aud/aud_s_trl

Text: Cannot reopen %s

Explanation: Internally, the audit trail index file was being reopened and the reopen failed.

Action: Report the problem to OSF.

0x10323051 aud_s_cannot_reopen_trail_index_file_rc

Severity: Error **Component:** aud/aud_s_trl

Text: Cannot reopen audit trail index file

Explanation: Internally, the audit trail index file was being reopened and the reopen failed.

Action: Report the problem to OSF.

0x1032305c aud_s_cant_open_client_binding_file

Severity: Error **Component:** aud/aud_s_esl

Text: Cannot open client binding file %s

Explanation: The Audit daemon cannot open the indicated client binding file.

Action: Check the permissions of the file and make sure the Audit daemon has read permission to the file.

0x1032305b aud_s_cant_open_client_binding_file_rc

Severity: Error **Component:** aud/aud_s_esl

Text: Cannot open client binding file

Explanation: The Audit daemon cannot open the client binding file.

Action: Check the permissions of the file and make sure the Audit daemon has read permission to the file.

0x1032307b aud_s_client_esl_mutex

Severity: Error **Component:** aud/aud_s_trl

Text: Audit client's esl mutex initialization failed.

Explanation: An attempt to initialize the event selection list mutex failed due to lack of resources or shortage of memory.

Action: Check system resource availability.

0x10323087 aud_s_client_updt_cond_init_fail

Severity: Error **Component:** aud/aud_s_general

Text: Cannot initialize the condition variable for the client update list.

Explanation: The `pthread_cond_init()` call failed.

Action: Check the return code of the `pthread_cond_init()` call.

0x10323086 aud_s_client_updt_mutex_init_fail

Severity: Error **Component:** aud/aud_s_general

Text: Cannot initialize the mutex for the client update list.

Explanation: The `pthread_mutex_init()` call failed.

Action: Check the return code of the `pthread_mutex_init()` call.

0x10323088 aud_s_client_updt_mutex_lock_fail

Severity: Error **Component:** aud/aud_s_general

Text: Cannot lock the mutex for the client update list.

Explanation: The `pthread_mutex_lock()` call failed.

Action: Check the return code of the `pthread_mutex_lock()` call.

0x10323089 aud_s_client_updt_mutex_unlock_fail

Severity: Error **Component:** aud/aud_s_general

Text: Cannot unlock the mutex for the client update list.

Explanation: The `pthread_mutex_unlock()` call failed.

Action: Check the return code of the `pthread_mutex_unlock()` call.

0x1032306b aud_s_condition_bit_set

Severity: Notice **Component:** aud/aud_s_esl

Text: Audit Conditions: %lx

Explanation: Lists Audit conditions.

Action: None required.

0x10323021 aud_s_dmn_acl

Severity: Error **Component:** aud/aud_s_general

Text: Cannot initialize daemon's ACL

Explanation: An attempt to initialize the Access Control List for the daemon failed. This is not the first point of failure.

Action: Check previous error messages and act accordingly.

0x10323023 aud_s_dmn_acl_mgr_interface

Severity: Error **Component:** aud/aud_s_general

Text: Cannot register daemon's ACL Manager interface bindings

Explanation: Cannot register daemon's ACL manager interface bindings using the `rpc_server_register_if()` or `rpc_ep_register()` calls.

Action: Check the RPC return code and act accordingly.

0x1032301b aud_s_dmn_acl_obj_add_group_entry

Severity: Error **Component:** aud/aud_s_general

Text: Cannot add audit-admin group to ACL: %lx

Explanation: An attempt to add audit-admin group to Auditd ACL failed.

Action: DCE utilities error. Check utilities codes for more information.

0x1032301c aud_s_dmn_acl_obj_add_obj_entry

Severity: Error **Component:** aud/aud_s_general

Text: Cannot add any-other obj to ACL: %lx

Explanation: An attempt to add any-other permissions to Auditd ACL failed.

Action: DCE utilities error. Check utilities codes for more information.

0x1032301d aud_s_dmn_acl_obj_add_unauth_entry

Severity: Error **Component:** aud/aud_s_general

Text: Cannot add unauthenticated obj to ACL: %lx

Explanation: An attempt to add unauthenticated permissions to Auditd ACL failed.

Action: DCE utilities error. Check utilities codes for more information.

0x1032301a aud_s_dmn_acl_obj_add_user_entry

Severity: Error **Component:** aud/aud_s_general

Text: Cannot add host user to ACL: %lx

Explanation: An attempt to add host user to Auditd ACL failed.

Action: DCE utilities error. Check utilities codes for more information.

0x10323018 aud_s_dmn_acl_obj_init

Severity: Error **Component:** aud/aud_s_general

Text: Cannot initialize ACL object : %lx

Explanation: An attempt to initialize the Auditd ACL object failed.

Action: DCE utilities error. Check utilities codes for more information.

0x10323019 aud_s_dmn_acl_register_obj_type

Severity: Error **Component:** aud/aud_s_general

Text: Cannot register AUD object type with ACL library: %lx

Explanation: An attempt to register the Auditd ACL object type failed.

Action: DCE utilities error. Check utilities codes for more information.

0x10323028 aud_s_dmn_auth_info

Severity: Fatal **Component:** aud/aud_s_general

Text: Cannot register daemon's authentication info with RPC runtime

Explanation: An attempt to register the Audit daemon's authentication information using `rpc_server_auth_info()` failed.

Action: Check the RPC return code and act accordingly.

0x1032300f aud_s_dmn_binding_file

Severity: Error **Component:** aud/aud_s_general

Text: Daemon cannot open its binding file %s to write

Explanation: When the Audit daemon was started, it could not open its binding file.

Action: Check that the Audit daemon has write permission to the file.

0x10323017 aud_s_dmn_bindings

Severity: Error **Component:** aud/aud_s_general

Text: Unable to get daemon bindings

Explanation: The Audit daemon tried to inquire for its own bindings using **rpc_server_inq_bindings** and failed.

Action: Check the RPC return code and act accordingly.

0x10323006 aud_s_dmn_cannot_get_context

Severity: Error **Component:** aud/aud_s_general

Text: Auditd unable to get current login context.

Explanation: The sec_login_get_current_context API returned the error: %d

Action: Make sure process is running as machine principal.

0x10323008 aud_s_dmn_cannot_get_mp_context

Severity: Error **Component:** aud/aud_s_general

Text: Auditd unable to get machine principal login context.

Explanation: The sec_login_get_current_context API returned the error: %d

Action: Make sure process is running as machine principal.

0x1032300a aud_s_dmn_cannot_open_central_trail

Severity: Error **Component:** aud/aud_s_general

Text: Cannot open audit central trail file %s

Explanation: An attempt to open the indicated Audit central trail file failed. This is not the first point of failure.

Action: Check previous messages related to this error.

0x10323009 aud_s_dmn_cannot_open_trail

Severity: Error **Component:** aud/aud_s_general

Text: Cannot open audit trail

Explanation: An attempt to open the Audit trail file failed. This is not the first point of failure.

Action: Check previous messages related to this error.

0x10323007 aud_s_dmn_cannot_release_context

Severity: Notice **Component:** aud/aud_s_general

Text: Auditd unable to release current login context.

Explanation: The sec_login_release_context API returned the error: %d

Action: Please refer to the DCE Problem Determination Guide for more information.

0x10323025 aud_s_dmn_control_export_interface

Severity: Error **Component:** aud/aud_s_general

Text: Cannot register daemon's control interface bindings to CDS

Explanation: CDS call failed.

Action: Report the problem.

0x10323027 aud_s_dmn_control_register_bindings

Severity: Error **Component:** aud/aud_s_general

Text: Cannot register daemon's control interface bindings with the endpoint mapper.

Explanation: The call to the endpoint mapper failed.

Action: Report the problem.

0x10323085 aud_s_dmn_create_update_thread

Severity: Error **Component:** aud/aud_s_general

Text: Cannot create the update thread

Explanation: An attempt to create the update thread using **pthread_create()** failed:
errno = %d

Action: Check the return code of the **pthread_create()** call and act accordingly.

0x1032301e aud_s_dmn_db_open

Severity: Error **Component:** aud/aud_s_general

Text: Cannot open AUD ACL database for reading: %lx

Explanation: An attempt to open the AUD acl database failed.

Action: DCE utilities error. Check utilities codes for more information.

0x1032301f aud_s_dmn_db_open_create

Severity: Error **Component:** aud/aud_s_general

Text: Cannot create AUD acl database : %lx

Explanation: An attempt to create the AUD acl database failed.

Action: DCE utilities error. Check utilities codes for more information.

0x10323020 aud_s_dmn_db_store_uuid

Severity: Error **Component:** aud/aud_s_general

Text: Couldn't store the auditd ACL in the ACL file : %lx

Explanation: An attempt to store the AUD ACL in the database failed.

Action: DCE utilities error. Check utilities codes for more information.

0x10323062 aud_s_dmn_disabled

Severity: Error **Component:** aud/aud_s_general

Text: The daemon is disabled for logging

Explanation: An attempt was made to log an audit record but the Audit daemon has been disabled by the administrator.

Action: Reenable the Audit daemon by issuing the **aud enable** command.

0x10323063 aud_s_dmn_disabled_in_selfaudit

Severity: Notice **Component:** aud/aud_s_general

Text: Operation denied: audit daemon is disabled

Explanation: The Audit daemon was started in self-audit mode, but since the Audit daemon has been disabled by the administrator it cannot log its own audit records, therefore all admin operations are not allowed, with the exception of enable and rewind.

Action: Reenable the Audit daemon by issuing the **aud enable** command.

0x1032302d aud_s_dmn_distinguished_thread_exit

Severity: Fatal **Component:** aud/aud_s_general

Text: %s thread got exception

Explanation: Thread got exception - exiting.

Action: None required.

0x1032302b aud_s_dmn_distinguished_thread_fault

Severity: Notice **Component:** aud/aud_s_general

Text: %s distinguished thread cancelled

Explanation: Distinguished thread got exception pthread_cancel_e.

Action: None required.

0x10323013 aud_s_dmn_esl_mutex

Severity: Error **Component:** aud/aud_s_general

Text: Daemon esl mutex initialization failed

Explanation: There was insufficient resource or memory to initialize the esl mutex.

Action: Check system resource availability.

0x1032300e aud_s_dmn_identity

Severity: Error **Component:** aud/aud_s_general

Text: Daemon does not have an identity

Explanation: The **dce_cf_prin_name_from_host()** call failed.

Action: Use the **-I** option to specify the server's name for authentication purposes. The default is **hosts/hostname/self**.

0x1032300d aud_s_dmn_identity_file

Severity: Error **Component:** aud/aud_s_general

Text: Daemon cannot open its identity file %s to write

Explanation: The Audit daemon attempted to write its identity into a local file. The write attempt failed, resulting in this message.

Action: Check that the Audit daemon has write permission to the indicated file.

0x10323022 aud_s_dmn_interfaces

Severity: Error **Component:** aud/aud_s_general

Text: Cannot register daemon's RPC interfaces

Explanation: An attempt to register the RPC interface for the Audit daemon using `rpc_server_register_if()` failed.

Action: Check the RPC return code and act accordingly.

0x10323029 aud_s_dmn_listener_thread

Severity: Error **Component:** aud/aud_s_general

Text: Cannot create the listener thread

Explanation: An attempt to create the listener thread using `pthread_create()` failed.

Action: Check the return code of the `pthread_create()` call and act accordingly.

0x10323011 aud_s_dmn_locale

Severity: Notice **Component:** aud/aud_s_general

Text: Set daemon locale: %s

Explanation: The current locale is displayed.

Action: None required.

0x1032302c aud_s_dmn_non_distinguished_thread_fault

Severity: Notice **Component:** aud/aud_s_general

Text: %s non-distinguished thread cancelled

Explanation: Non-Distinguished thread got exception `pthread_cancel_e`.

Action: None required.

0x1032302e aud_s_dmn_normal_exit

Severity: Notice **Component:** aud/aud_s_general

Text: %s exits normally

Explanation: Audit daemon stopped normally as a result of the **aud stop** command.

Action: None required.

0x10323012 aud_s_dmn_privilege

Severity: Error **Component:** aud/aud_s_general

Text: Running %s without privileges

Explanation: The user is trying to run the Audit daemon, but does not have the appropriate privileges.

Action: Login as root before starting up the Audit daemon.

0x10323016 aud_s_dmn_protseq

Severity: Error **Component:** aud/aud_s_general

Text: Unable to select protocol sequence

Explanation: RPC tried to register the protocol sequence and failed.

Action: Check the RPC return code and act accordingly.

0x1032300b aud_s_dmn_ready_to_listen

Severity: Notice **Component:** aud/aud_s_general

Text: Daemon is ready to listen to its interfaces

Explanation: The Audit daemon has started.

Action: None required.

0x1032300c aud_s_dmn_register_auth_info

Severity: Notice **Component:** aud/aud_s_general

Text: Daemon registered its authentication identity %s with RPC runtime

Explanation: The indicated authentication identity has been registered with RPC.

Action: None required.

0x10323010 aud_s_dmn_register_interface

Severity: Notice **Component:** aud/aud_s_general

Text: Daemon registered interfaces with RPC runtime

Explanation: The request to register the Audit daemon interface with RPC was successful.

Action: None required.

0x10323002 aud_s_dmn_starts

Severity: Notice **Component:** aud/aud_s_general

Text: The audit daemon started

Explanation: The Audit daemon has been started.

Action: None required.

0x10323014 aud_s_dmn_state_mutex

Severity: Error **Component:** aud/aud_s_general

Text: Daemon state mutex initialization failed

Explanation: There was insufficient resource or memory to initialize the state mutex.

Action: Check system resource availability.

0x10323024 aud_s_dmn_svc_mgr_export_interface

Severity: Error **Component:** aud/aud_s_general

Text: Cannot register daemon's SVC manager bindings to CDS

Explanation: The attempt to register the SVC manager bindings for the Audit daemon to using the **rpc_ns_binding_export()** failed.

Action: Check the RPC return code and act accordingly.

0x10323026 aud_s_dmn_svc_mgr_register_bindings

Severity: Error **Component:** aud/aud_s_general

Text: Cannot register daemon's svc manager bindings with RPCD

Explanation: An attempt to register the SVC manager bindings with RPC using the `rpc_ep_register()` failed call.

Action: Check the RPC return code and act accordingly.

0x1032302a aud_s_dmn_thread_join_listener

Severity: Error **Component:** aud/aud_s_general

Text: Daemon thread %s unable to join the listener task

Explanation: An attempt to join the indicated daemon thread using the `pthread_join()` call failed.

Action: Check the return code of the `pthread_join()` call and act accordingly.

0x10323015 aud_s_dmn_trail_mutex

Severity: Error **Component:** aud/aud_s_general

Text: Daemon trail mutex initialization failed

Explanation: There was insufficient resource or memory to initialize the trail mutex.

Action: Check system resource availability.

0x10323003 aud_s_dmn_trail_name

Severity: Error **Component:** aud/aud_s_general

Text: The -t option used without an argument

Explanation: The **-t** option requires a trail filename.

Action: Give the trail filename with the **-t** option.

0x10323004 aud_s_dmn_trail_size

Severity: Error **Component:** aud/aud_s_general

Text: The -s option used without an argument

Explanation: The **-s** option requires a trail file size limit.

Action: Give the trail file size limit (defined by the user) with the **-s** option.

0x10323005 aud_s_dmn_usage

Severity: Fatal **Component:** aud/aud_s_general

Text: Unknown option %s used. Usage: %s [-i identity] [-a] [-t trail_name] [-s size] [-wrap] [-d where] [-w where] [-D]

Explanation: ?

Action: Check arguments used.

0x10323001 aud_s_dmn_work_dir

Severity: Error **Component:** aud/aud_s_general

Text: The Audit daemon cannot change to working directory %s

Explanation: An invalid directory was specified or no permission to the directory.

Action: Check the existence of the directory and its permissions.

0x10323048 aud_s_empty_event_class_list

Severity: Error **Component:** aud/aud_s_esl

Text: Audit event class list is empty

Explanation: The audit control client provided an empty event class list.

Action: Specify a valid event class. Refer to the Administration guide for the description of a valid event class.

0x1032306c aud_s_evt_classes

Severity: Notice **Component:** aud/aud_s_esl

Text: Event Classes:

Explanation: This is a listing of the event classes.

Action: None required.

0x10323081 aud_s_evt_tail_info_exceeds_limit

Severity: Error **Component:** aud/aud_s_evt

Text: The count of audit record tail information items exceeds the limit

Explanation: The tail portion of the audit trail record has exceeded its limit of 4K.

Action: Make sure that the tail portion of the audit record does not exceed 4K.

0x10323038 aud_s_free_encoding_service_handle

Severity: Error **Component:** aud/aud_s_general

Text: Cannot free encoding service handle

Explanation: A call to **rpc_sm_client_free()** to free the encoding handle failed.

Action: Check the RPC return code, this may be a memory leak.

0x1032308b aud_s_got_server_uuid

Severity: Error **Component:** aud/aud_s_evt

Text: dce_aud_print received a server UUID. This was not expected. UUID is %s

Explanation: The dce_aud_print routine received a server UUID. This was not expected. The routine is expecting to always receive a NULL server UUID.

Action: Contact your DCE supplier.

0x10323046 aud_s_invalid_action_bit_set

Severity: Error **Component:** aud/aud_s_esl

Text: Audit action bit set %lx is not within %lx

Explanation: The audit control client provided an invalid action vector.

Action: Specify valid actions in the filter. Refer to the administration guide for the description of valid actions.

0x10323083 aud_s_invalid_audit_trail_size_limit

Severity: Error **Component:** aud/aud_s_trl

Text: Environment variable DCEAUDITTRAILSIZE has an invalid value.

Explanation: The Environment variable **DCEAUDITTRAILSIZE** is either 0 or out of range.

Action: Assign a valid value to environment variable **DCEAUDITTRAILSIZE** and restart the server.

0x10323047 aud_s_invalid_condition_bit_set

Severity: Error **Component:** aud/aud_s_esl

Text: Audit condition bitset %lx is not within %lx or it contains no bit

Explanation: The audit control client provided an invalid condition vector.

Action: Specify valid conditions in the filter. Refer to the Administration Guide for the descriptions of valid conditions.

0x10323045 aud_s_invalid_esl_type

Severity: Error **Component:** aud/aud_s_esl

Text: The esl type %d is invalid

Explanation: The audit control client provided an invalid esl type.

Action: Provide a valid esl type. Refer to the Administration guide for the description of valid esl types.

0x10323044 aud_s_invalid_esl_type_rc

Severity: Error **Component:** aud/aud_s_esl

Text: The esl type is invalid

Explanation: The audit control client has provided an invalid esl type.

Action: Provide a valid esl type. Refer to the Administration guide for the description of valid esl types.

0x1032306d aud_s_invalid_event_class_file

Severity: Error **Component:** aud/aud_s_general

Text: Format error in event class file %s.

Explanation: A format error was encountered in the event class file.

Action: Correct the event class file format error, and retry.

0x10323043 aud_s_invalid_guide

Severity: Error **Component:** aud/aud_s_esl

Text: Invalid guide supplied

Explanation: The audit control client has provided an invalid guide, \ with condition, action or event class in error.

Action: Provide a valid guide. Refer to the Administration guide for a description of valid guides.

0x10323070 aud_s_invalid_line_in_class_file

Severity: Error **Component:** aud/aud_s_general

Text: An invalid line %s was found in event class file %s

Explanation: A line in the event class file had invalid syntax.

Action: Correct the invalid line and retry the operation. For the correct event class file syntax, refer to the Administration Guide.

0x1032307e aud_s_invalid_outcome

Severity: Error **Component:** aud/aud_s_evt

Text: Outcome %lx supplied is invalid.

Explanation: An invalid outcome has been supplied.

Action: Check the range of valid outcomes, and provide the correct outcome.

0x1032307d aud_s_invalid_record_descriptor

Severity: Error **Component:** aud/aud_s_evt

Text: An invalid audit record descriptor was used.

Explanation: The user invoked the Audit routines and passed a NULL *ard*.

Action: Use a valid audit record descriptor. Refer to the Application Development Guide and Reference for the description of record descriptors.

0x10323080 aud_s_invalid_trail_descriptor

Severity: Error **Component:** aud/aud_s_evt

Text: An invalid audit trail descriptor was used

Explanation: The user invoked the Audit routines using an invalid *at* value.

Action: Use a valid audit trail descriptor.

0x1032306f aud_s_line_too_long_in_class_file

Severity: Error **Component:** aud/aud_s_general

Text: A line is too long in event class file %s

Explanation: A line in the event class file exceeds 2K.

Action: Check the event class file. Correct the line length and retry the operation.

0x10323055 aud_s_lock_esl_file

Severity: Notice **Component:** aud/aud_s_esl

Text: Cannot lock file %s

Explanation: For various reasons (for example, file may be locked by others), the file cannot be locked.

Action: None required.

0x10323036 aud_s_log_access_denied

Severity: Error **Component:** aud/aud_s_general

Text: Client's audit log access denied

Explanation: A client attempted to log to the audit record; however, the client is not authorized to perform this operation.

Action: Check if the client should be authorized. Modify the ACL of the Audit daemon, if necessary.

0x10323074 aud_s_no_current_login_context

Severity: Error **Component:** aud/aud_s_general

Text: Cannot get login context

Explanation: The **dce_login** command has not been performed and is required by the requested operation.

Action: Execute the **dce_login** command.

0x10323073 aud_s_no_filter

Severity: Notice **Component:** aud/aud_s_esl

Text: No filter was found for the subject.

Explanation: This is an informational message.

Action: None required.

0x10323056 aud_s_open_esl_file

Severity: Warning **Component:** aud/aud_s_esl

Text: Cannot open esl file %s

Explanation: The Audit daemon cannot open the esl file.

Action: Check if the esl file should be there. If so, check permissions.

0x10323057 aud_s_open_esl_update_file

Severity: Warning **Component:** aud/aud_s_esl

Text: Cannot open esl update file %s

Explanation: The Audit daemon cannot open the esl file.

Action: Check if the esl file should be there. If so, check permissions.

0x1032307f aud_s_outcomes_inconsistent

Severity: Error **Component:** aud/aud_s_evt

Text: Outcome %lx supplied in dce_aud_commit is not consistent with %lx supplied in dce_aud_start().

Explanation: Outcome supplied in dce_aud_commit has to be consistent with the one in **dce_aud_start()**.

Action: Check consistency of outcomes supplied in **dce_aud_start()** and **dce_aud_commit()**.

0x10323035 aud_s_permission_denied

Severity: Error **Component:** aud/aud_s_general

Text: Client has no permission to execute operation

Explanation: The client is not authorized to execute the operation invoked.

Action: Check if the client should be authorized. Modify the ACL of the Audit daemon, if necessary.

0x1032305e aud_s_remove_dir_client_update_binding_failed

Severity: Error **Component:** aud/aud_s_esl

Text: Unable to remove client update binding directory %s, rc= %d, errno= %d

Explanation: Audit client cannot remove its binding directory.

Action: Remove the specified directory.

0x1032305d aud_s_remove_file_client_update_binding_failed

Severity: Error **Component:** aud/aud_s_esl

Text: Unable to remove client update binding file %s, rc= %d, errno= %d

Explanation: Audit client cannot remove its binding file.

Action: Remove the specified file.

0x10323053 aud_s_rename_esl_file

Severity: Error **Component:** aud/aud_s_esl

Text: Cannot rename %s to %s

Explanation: Internally, the esl file was being renamed and the renaming failed.

Action: Report the problem to OSF.

0x10323054 aud_s_rename_esl_update_file

Severity: Error **Component:** aud/aud_s_esl

Text: Cannot rename %s to %s

Explanation: Internally, the esl update file was being renamed and the renaming failed.

Action: Report the problem to OSF.

0x1032304c aud_s_rename_trail_file

Severity: Error **Component:** aud/aud_s_trl

Text: Cannot rename %s to %s

Explanation: Internally, the audit trail file was being renamed and the renaming failed.

Action: Report the problem to OSF.

0x1032304b aud_s_rename_trail_file_rc

Severity: Error **Component:** aud/aud_s_trl

Text: Cannot rename audit trail file

Explanation: Internally, the audit trail file was being renamed and the renaming failed.

Action: Report the problem to OSF.

0x1032304e aud_s_rename_trail_index_file

Severity: Error **Component:** aud/aud_s_trl

Text: Cannot rename %s to %s

Explanation: Internally, the audit trail index file was being renamed and the renaming failed.

Action: Report the problem to OSF.

0x1032304d aud_s_rename_trail_index_file_rc

Severity: Error **Component:** aud/aud_s_trl

Text: Cannot rename audit trail index file

Explanation: Internally, the audit trail index file was being renamed and the renaming failed.

Action: Report the problem to OSF.

0x10323065 aud_s_retry_lock_esl_file

Severity: Warning **Component:** aud/aud_s_esl

Text: Cannot lock esl file %s, retry %d seconds later

Explanation: The indicated event selection list could not be locked because it is being read.

Action: Wait for the indicated time and retry the operation.

0x10323059 aud_s_retry_lock_esl_updt_file

Severity: Warning **Component:** aud/aud_s_esl

Text: Cannot lock esl update file %s, retry %d seconds later

Explanation: The indicated event selection list could not be locked for update because it is being read.

Action: Wait for the indicated time and retry the operation.

0x1032308d aud_s_rewind_index_file

Severity: Error **Component:** aud/aud_s_trl

Text: Could not rewind the Audit index file

Explanation: The **ftruncate()** call on the index file failed.

Action: Contact your system administrator.

0x1032308c aud_s_rewind_trail_file

Severity: Error **Component:** aud/aud_s_trl

Text: Could not rewind the Audit trail file

Explanation: The **ftruncate()** call on the trail file failed.

Action: Contact your system administrator.

0x1032302f aud_s_rgy_server_unavailable

Severity: Error **Component:** aud/aud_s_general

Text: Registry server is not available

Explanation: An attempt was made to use the Registry server, but it was not found.

Action: The Security daemon must be running in order to use the Registry server. Start the Security daemon and retry the operation.

0x10323037 aud_s_rpc_count

Severity: Notice **Component:** aud/aud_s_general

Text: Audit daemon serving RPC number %d

Explanation: The Audit daemon keeps track of RPC operations and displays this message.

Action: None required.

0x10323077 aud_s_stat_esl_file

Severity: Error **Component:** aud/aud_s_esl

Text: Cannot stat esl file %s

Explanation: The **fstat()** call on the esl file failed.

Action: Check the **fstat()** error code and act accordingly.

0x10323058 aud_s_stat_esl_update_file

Severity: Error **Component:** aud/aud_s_esl

Text: Cannot stat esl update file %s

Explanation: The UNIX **stat** command returned an error when the Audit daemon tried to get size information about the esl file.

Action: Make sure the file exists. The file name is of the form **/opt/dcelocal/var/audit/esl***.

0x1032307c aud_s_trail_file_corrupted

Severity: Error **Component:** aud/aud_s_evt

Text: Trail file %s is corrupted.

Explanation: The **fread()** call on the trail file failed.

Action: Contact your system administrator.

0x10323082 aud_s_trl_file_size_limit

Severity: Notice **Component:** aud/aud_s_trl

Text: Audit trail file %s and its companion index file %s are ready to be backed-up.

Explanation: This is an informational message, indicating that the audit trail file has reached its set limit, has been saved to the named files, which can be backed up to save on-line storage space for new audit records.

Action: Back up the audit trail file and its companion index file and remove these files.

0x10323061 aud_s_trl_full

Severity: Error **Component:** aud/aud_s_evt

Text: The trail file is full

Explanation: The storage size limit for the audit trail file has been reached.

Action: Empty the trail file and issue the **aud enable** command to restart the logging of audit records.

0x1032304a aud_s_trl_invalid_open_flags

Severity: Error **Component:** aud/aud_s_trl

Text: dce_aud_open received invalid option combination

Explanation: An attempt was made to open an audit trail file, but neither the read or write option was specified.

Action: The **dce_aud_open()** function must include either the **read** or **write** option. Correct the function call by including one of these options.

0x10323049 aud_s_trl_invalid_stostrategy

Severity: Error **Component:** aud/aud_s_trl

Text: Audit trail store strategy is invalid

Explanation: The audit control client provided an invalid store strategy.

Action: Provide a valid store strategy. Valid store strategies are described in the Administration guide.

0x10323060 aud_s_trl_write_failure

Severity: Error **Component:** aud/aud_s_evt

Text: The write to the trail file failed.

Explanation: An attempt to write to the audit trail file (using the **fwrite()** call) failed.

Action: Find out the reason why **fwrite()** failed and act accordingly.

0x1032305f aud_s_unable_to_sync_client

Severity: Warning **Component:** aud/aud_s_esl

Text: Unable to inform process %s about esl update

Explanation: Audit client died without cleaning its binding file, thus the indicated process was not notified of the event selection list update.

Action: Remove the obsolete client binding file.

0x10323042 aud_s_unknown_cell

Severity: Error **Component:** aud/aud_s_esl

Text: Foreign cell %s is not registered or has been removed

Explanation: An unknown cell name was used in a filter

Action: Provide a known cell name.

0x10323041 aud_s_unknown_cell_rc

Severity: Error **Component:** aud/aud_s_esl

Text: Foreign cell is not registered or has been removed

Explanation: An unknown cell name was used in a filter.

Action: Provide a known cell name.

0x1032306e aud_s_unknown_event_class

Severity: Error **Component:** aud/aud_s_general

Text: %s is not a known event class.

Explanation: There is no event class file for the indicated event class.

Action: Use a known event class. Use the **audevents catalog** command to obtain a list of all known event classes.

0x10323040 aud_s_unknown_foreign_group

Severity: Error **Component:** aud/aud_s_esl

Text: Foreign group %s is not registered or has been removed

Explanation: An unknown foreign group name was used in a filter.

Action: Provide a known foreign group name.

0x1032303f aud_s_unknown_foreign_group_rc

Severity: Error **Component:** aud/aud_s_esl

Text: Foreign group is not registered or has been removed

Explanation: An unknown foreign group name was used in a filter.

Action: Provide a known foreign group name.

0x1032303c aud_s_unknown_foreign_principal

Severity: Error **Component:** aud/aud_s_esl

Text: Foreign principal %s is not registered or has been removed

Explanation: An unknown foreign principal name was used in a filter.

Action: Provide a known foreign principal name.

0x1032303b aud_s_unknown_foreign_principal_rc

Severity: Error **Component:** aud/aud_s_esl

Text: Foreign principal is not registered or has been removed

Explanation: An unknown foreign principal name was used in a filter.

Action: Provide a known foreign principal name.

0x1032303e aud_s_unknown_group

Severity: Error **Component:** aud/aud_s_esl

Text: Group %s is not registered or has been removed

Explanation: An unknown group name was used in a filter.

Action: Provide a known group name.

0x1032303d aud_s_unknown_group_rc

Severity: Error **Component:** aud/aud_s_esl

Text: Group is not registered or has been removed

Explanation: An unknown group name was used in a filter.

Action: Provide a known group name.

0x1032303a aud_s_unknown_principal

Severity: Error **Component:** aud/aud_s_esl

Text: Principal %s is not registered or has been removed

Explanation: An unknown principal name was used in a filter.

Action: Provide a known principal name.

0x10323039 aud_s_unknown_principal_rc

Severity: Error **Component:** aud/aud_s_esl

Text: Principal is not registered or has been removed

Explanation: An invalid principal name was used in a filter.

Action: Provide a known principal name.

0x1032308a aud_s_updt_opendir_fail

Severity: Error **Component:** aud/aud_s_esl

Text: Cannot open %s: errno = %d

Explanation: The **opendir()** call failed.

Action: There is some problem in opening the specified directory. Verify that the permissions on the directory are correct and that there are not any filesystem problems.

0x10323064 aud_s_uuid_hash_failed

Severity: Error **Component:** aud/aud_s_esl

Text: Cannot get the hash value of the subject uuid: %s ; status: %s

Explanation: The **uuid_hash** call failed.

Action: See the corresponding RPC error code.

0x10323066 aud_s_wrong_esl_file_version

Severity: Error **Component:** aud/aud_s_esl

Text: The format of esl file %s is not current version

Explanation: The internal file which holds the filter was corrupted.

Action: Remove the old version of the esl file, and retry the operation.

0x10323067 aud_s_wrong_esl_updt_file_version

Severity: Error **Component:** aud/aud_s_esl

Text: The format of esl update file %s is not current version

Explanation: An attempt was made to read an esl update file which was not current.

Action: Remove the old version of the esl update file, and retry the operation.

0x10323030 aud_s_wrong_protection_level

Severity: Error **Component:** aud/aud_s_general

Text: RPC client used wrong protection level

Explanation: Returned the information from the **rpc_binding_inq_auth()** together with **authr_level=rpc_c_protect_level_pkt_privacy** and **authz_svc=rpc_c_authz_dce**.

Action: Check communication between the client and the application server. Then, adjust the protection level.

0x1032305a aud_s_wrong_version_esl_updt_file

Severity: Error **Component:** aud/aud_s_esl

Text: The version of esl update file %s is not current

Explanation: An attempt was made to read an esl update file which was obsolete.

Action: Remove the obsolete esl update file.

0x10d0a3ed CDS_ACCESSDENIED

Severity: Varies **Component:** cds

Text: Insufficient rights to perform requested operation

Explanation: The user account from which you entered the command does not have the required CDS permissions to perform the operation you requested.

Action: Assuming you have adequate permissions, grant yourself (the principal under which you are logged in) the appropriate permissions to perform the operation.

Otherwise, contact your namespace administrator to get the appropriate permissions, or reenter the command while you are logged in to an account that has the required permissions.

0x10d0a7d0 CDS_ACCESSVIOLATION

Severity: Varies **Component:** cds

Text: Access violation.

Explanation: Requestor does not have the permission to issue the command.

Action: Change the server management acl or login as an authorized principal and try again.

0x10d0a460 CDS_ALIASCYCLE

Severity: Varies **Component:** cds

Text: The supplied cellname would result in a hierarchical cycle.

Explanation: A loop has been detected in the name choosen.

Action: Supply a different cellname.

0x10d0a45e CDS_ALIASTOOLONG

Severity: Varies **Component:** cds

Text: The supplied cellname is required to be < 255 bytes in length.

Explanation: Name to long.

Action: Choose a shorter cellname.

0x10d0a462 CDS_ALIASTOOSHORT

Severity: Varies **Component:** cds

Text: The supplied cellname is required to have two simple names for an alias and three simple names for a child alias.

Explanation: Cellname is to short.

Action: Choose a longer cellname.

0x10d0a3fa CDS_ALREADYREPLICA

Severity: Varies **Component:** cds

Text: Specified clearinghouse already contains a copy of the directory

Explanation: You tried to create a replica of a directory in a clearinghouse that already contains a replica of that directory. A clearinghouse can store only one replica of a directory.

Action: None required, or choose another clearinghouse in which to create the replica.

0x10d0a403 CDS_BADCLOCK

Severity: Varies **Component:** cds

Text: Server clocks are not synchronized

Explanation: While propagating updates, CDS detected that an update contained an invalid timestamp. The discrepancy between the server that issued the invalid timestamp and the other CDS servers on the network is greater than 4 minutes.

Action: Verify that the DCE Distributed Time Service is running and is correctly synchronizing all servers listed in the message text. See the Distributed Time Service documentation in the Administration Guide for further information.

0x10d0a402 CDS_BADEPOCH

Severity: Varies **Component:** cds

Text: Directory replicas are not synchronized

Explanation: During a skulk of a directory, the update procedure found that the values stored in the **CDS_Epoch** attribute of each replica in the directory's replica set were not identical.

Action: Use the **set directory to new epoch** command to synchronize all replicas in the directory's replica set.

0x10d0a3ee CDS_CANNOTAUTHENTICATE

Severity: Varies **Component:** cds

Text: Requesting principal could not be authenticated to the clearinghouse

Explanation: The server could not obtain a Privilege Attribute Certificate it could use for user authentication.

Action: Login again and retry the command.

0x10d0a45d CDS_CANNOT_REM_CELLNAME

Severity: Varies **Component:** cds

Text: You cannot remove the current cellname alias.

Explanation: Cannot remove cell alias.

Action: Either choose a different alias to remove or change the current primary alias for the cell.

0x10d0a459 CDS_CANNOT_REM_PREFERRED

Severity: Varies **Component:** cds

Text: You cannot remove the current primary cell alias (current cell name).

Explanation: Operation cannot be performed.

Action: Either choose a different alias to remove or change the current primary alias for the cell.

0x10d0a401 CDS_CLEARINGHOUSEDOWN

Severity: Varies **Component:** cds

Text: Requested clearinghouse exists but is not available

Explanation: The clearinghouse that you tried to access resides on the specified server but is not currently available. The clearinghouse may not be running.

Action: Restart the server on the node where the clearinghouse resides.

0x10d0a7ce CDS_CLERKBUG

Severity: Varies **Component:** cds

Text: Implementation specific error

Explanation: CDS detected a software error in the clerk interface.

Action: This error may indicate a serious problem in the clerk running on the system that receives the message. However, if CDS service is not interrupted, and even if

the error recurs, wait at least 24 hours before taking any action. If, after 24 hours, the error messages continue to occur, or if CDS service is interrupted, contact your software supplier.

0x10d0a96f CDS_CL_READ

Severity: Varies **Component:** cds

Text: Buffer too small

Explanation: The buffer provided to cdsGetMsg() was too small for the requested message.

Action: See your DCE support person.

0x10d0a3ef CDS_CONFLICTINGARGUMENTS

Severity: Varies **Component:** cds

Text: Conflicting arguments specified

Explanation: Your command contains two or more conflicting arguments. You cannot include the specified arguments within a single command.

Action: Reenter your command, omitting the conflicting argument (or arguments).

0x10d0aef8 CDSCP_ACC_DENIED

Severity: Varies **Component:** cds

Text: Access denied.\n

Explanation: You must be a local superuser to dump the clerk cache.

Action: Log in as root and try again.

0x10d0af23 CDSCP_ASKNOMEM

Severity: Fatal **Component:** cds/cds_svc_cdscp

Text: Could not allocate memory for error text.\n

Explanation: Insufficient memory for error list element.

Action: Check system swap space and try again.

0x10d0af33 CDSCP_BUG_EMIT_LINE

Severity: Varies **Component:** cds

Text: Problem in emit_line of op_list.c got status %d while trying to write:\n%s\n on %s.\n

Explanation: The **fprintf(3s)** function failed while trying to display response lines.

Action: See your DCE support person.

0x10d0aed8 CDSCP_CANT_OPEN

Severity: Varies **Component:** cds

Text: Could not open file %s\n

Explanation: The specified file for the **do** command could not be opened.

Action: Check that the file exists.

0x10d0aed3 CDSCP_CANT_OPEN_PARSE_TABLE

Severity: Fatal **Component:** cds/cds_svc_cdscp

Text: Cannot open file %s\n

Explanation: The auxilliary file **cdscp.bpt** could not be opened.

Action: Reinstall cdscp.

0x10d0af24 CDSCP_CMD_DFL

Severity: Fatal **Component:** cds/cds_svc_cdscp

Text: Internal error: command function %d not handled.\n

Explanation: An internal error in cdscp parsed a command number which is not handled.

Action: Software version mismatch. See your DCE support person.

0x10d0aef2 CDSCP_CMD_TOOBIG

Severity: Varies **Component:** cds

Text: Command requires %d byte buffer; parser has %d bytes\n

Explanation: The command line is too long for the command buffer.

Action: This should never happen, max is 44444 bytes

0x10d0af31 CDSCP_CMD_TOO_BIG

Severity: Varies **Component:** cds

Text: Command too big.\n

Explanation: The command line is too long for the command buffer.

Action: This should never happen on a valid command.

0x10d0aecc CDSCP_DUPCL

Severity: Varies **Component:** cds

Text: Clearinghouse %s duplicated\n

Explanation: You specified the same clearinghouse name more than once in the **set directory to new epoch** command.

Action: Reenter your command, omitting the duplicate clearinghouse specification.

0x10d0af32 CDSCP_FILE_NOT_OPEN

Severity: Varies **Component:** cds

Text: Could not open file %s.\n

Explanation: An fopen(3s) call failed

Action: Make sure the file exists and that file protection is set appropriately.

0x10d0af2e CDSCP_GRATTRS_1

Severity: Error **Component:** cds/cds_svc_cdscp

Text: Received CDS_NOCOMMUNICATION adding attribute %s to %s\n

Explanation: An attribute set value could not be added due to communications problem.

Action: Retry the operation.

0x10d0aed6 CDSCP_LOAD_FAILURE

Severity: Fatal **Component:** cds/cds_svc_cdscp

Text: Parse table load failure (%d)\n

Explanation: The parse table **cdscp.bpt** could not be loaded.

Action: Reinstall cdscp.

0x10d0aecf CDSCP_MISEXCL

Severity: Varies **Component:** cds

Text: Clearinghouse %s exclusion argument missing\n

Explanation: You did not account for **clearinghouse name** (which stores a replica of the directory that you specified) in your **set directory to new epoch** command.

Action: If the replica at this clearinghouse is still a part of the directory's replica set, you must include the clearinghouse name and the replica type in the command. If you intend to exclude the replica from the replica set, use the **exclude** argument in the command. You must account for all existing replicas in the command.

0x10d0aeda CDSCP_MSG_PARSE_STATUS

Severity: Fatal **Component:** cds/cds_svc_cdscp

Text: Status %d returned from parser\n%s\n

Explanation: The auxilliary file **cdscp.bpt** may be corrupt.

Action: Should not happen. Try reinstalling cdscp. If this doesn't correct the problem contact your DCE support person.

0x10d0aed7 CDSCP_NO_FILE_MEM

Severity: Fatal **Component:** cds/cds_svc_cdscp

Text: No memory for %d byte file %s\n

Explanation: Could not get sufficient memory to read the parse file.

Action: Insure sufficient swap space.

0x10d0aed5 CDSCP_NO_FIT

Severity: Fatal **Component:** cds/cds_svc_cdscp

Text: %d byte file %s will not fit in %d byte buffer\n

Explanation: A parse file line was longer than the read buffer could accomodate.

Action: The parse file is too big. Contact your DCE support person.

0x10d0aef4 CDSCP_NOGETHAND

Severity: Varies **Component:** cds

Text: No memory to get handle to nameserver.\n

Explanation: An enumeration handle could not be obtained for reading attributes.

Action: Insure sufficient swap space and try command again.

0x10d0aece CDSCP_NOMASTER

Severity: Varies **Component:** cds

Text: No master in directory replica set\n

Explanation: The **show cell** command could not find the master replica of the cell root directory.

Action: Enter the **set cdscp confidence** command with a *value* or **Lhigh** and try again.

0x10d0af1e CDSCP_NOMEM

Severity: Error **Component:** cds/cds_svc_cdscp

Text: Insufficient memory to display tower.\n

Explanation: A **malloc(3)** failed.

Action: Check swap space and try again.

0x10d0aef1 CDSCP_NOMEM_DOFILE

Severity: Varies **Component:** cds

Text: No memory for processing command file %s\n

Explanation: Could not get enough memory for **do** command block.

Action: Insure sufficient swap space. Reduce size of file.

0x10d0aef3 CDSCP_NOMEM_REPSET

Severity: Varies **Component:** cds

Text: No memory for building replica set.\n

Explanation: Memory for creating a replica set could not be obtained during the creation of a child pointer.

Action: Insure sufficient swap space and try again.

0x10d0aed0 CDSCP_NOREP

Severity: Varies **Component:** cds

Text: No replica of specified directory exists at clearinghouse %s\n

Explanation: The clearinghouse *clearinghouse_name* (that you specified in the **exclude** argument of your **set directory to new epoch** command) does not store a replica of the specified directory.

Action: Enter the **show directory** command and specify the **CDS_Replicas** attribute to display a list of the clearinghouses that contain replicas of the specified directory. Then, reenter your original command and specify the correct clearinghouse names.

0x10d0aed9 CDSCP_PARSE_ERROR

Severity: Varies **Component:** cds

Text: Syntax error\n%s\n%s^\n

Explanation: The CDS control program detected a syntax error in your command before attempting to execute it. The command may contain misspelled words, illegal characters, or other typographical errors. You may have included extraneous words or omitted required node, option, or argument specifications. Command arguments and options may not appear in proper sequence.

Action: Invoke CDS online help or refer to the *DCE Administration Reference* for a description of proper syntax for the command you are trying to use. Reenter your command correctly.

0x10d0aed2 CDSCP_PARSE_VERSION

Severity: Fatal **Component:** cds/cds_svc_cdscp

Text: Version mismatch between parse table file %s and parser\n

Explanation: The auxilliary file **cdscp.bpt** is the incorrect version.

Action: Reinstall cdscp.

0x10d0aed4 CDSCP_READ_ERROR

Severity: Fatal **Component:** cds/cds_svc_cdscp

Text: Could not read file %s\n

Explanation: The auxilliary file **cdscp.bpt** could not be read.

Action: Reinstall cdscp.

0x10d0aecd CDSCP_TWO_MASTERS

Severity: Varies **Component:** cds

Text: More than one master replica specified\n

Explanation: You specified more than one master replica in the **set directory to new epoch** command. A directory's replica set can contain only one master replica.

Action: Reenter your command and specify only one clearinghouse location for the directory's master replica.

0x10d0af1d CDSCP_UNIMPL_OUT_FNC

Severity: Error **Component:** cds/cds_svc_cdscp

Text: Unimplemented output function for attribute id (%d), continuing display.\n

Explanation: cdscp does not know how to display this returned attribute.

Action: Software version mismatch. See your DCE support person.

0x10d0af1f CDSCP_UNK_CA_CLE_ATT

Severity: Error **Component:** cds/cds_svc_cdscp

Text: Unknown cached clearinghouse attribute id (%d) encountered.\n

Explanation: The clerk returned an attribute which was unknown to this cdscp.

Action: Software version mismatch. See your DCE support person.

0x10d0af20 CDSCP_UNK_CLE_CTR

Severity: Error **Component:** cds/cds_svc_cdscp

Text: Unknown clearinghouse counter id (%d) encountered.\n

Explanation: The clerk returned a clearinghouse counter which was unknown to this cdscp.

Action: Software version mismatch. See your DCE support person.

0x10d0af1c CDSCP_UNK_CLRK_ATT

Severity: Error **Component:** cds/cds_svc_cdscp

Text: Unknown clerk attribute id (%d), continuing display.\n

Explanation: The clerk returned an attribute which was unknown to this cdscp.

Action: Software version mismatch. See your DCE support person.

0x10d0af21 CDSCP_UNK_SVR_ATT

Severity: Error **Component:** cds/cds_svc_cdscp

Text: Unknown server attribute id (%d), continuing.\n

Explanation: The server returned an attribute which was unknown to this cdscp.

Action: Software version mismatch. See your DCE support person.

0x10d0aca6 CDS_CSCLHEXISTS

Severity: Varies **Component:** cds

Text: Cached Server clearinghouse already exists

Explanation: A clearinghouse returned by the requested server already exists in the cache.

Action: Check if there is a duplicate clearinghouse name.

0x10d0aca7 CDS_CSNOCLH

Severity: Varies **Component:** cds

Text: No clearinghouse returned by server

Explanation: The server on the requested node has no clearinghouses.

Action: Make sure you are using the proper address.

0x10d0aca5 CDS_CSTAGEXISTS

Severity: Varies **Component:** cds

Text: Cached Server tag already exists

Explanation: The requested cached server name already exists.

Action: Choose a different name.

0x10d0aca4 CDS_CSTAGUNKNOWN

Severity: Varies **Component:** cds

Text: Cached Server tag is unknown

Explanation: The requested cached server doesn't exist.

Action: Verify the supplied name.

0x10d0a3ff CDS_DANGLINGLINK

Severity: Varies **Component:** cds

Text: Specified soft link points to nonexistent entry

Explanation: The **CDS_LinkTarget** to which the specified soft link points no longer exists (or may never have existed) in the namespace.

Action: Enter the **delete link** command to delete the soft link, or use the **set link** command to modify the current **CDS_LinkTarget** value.

0x10d0a404 CDS_DATACORRUPTION

Severity: Varies **Component:** cds

Text: Data corruption detected at clearinghouse

Explanation: An error occurred while CDS was accessing the data in a clearinghouse. The clearinghouse may be corrupted.

Action: Refer to the servicablily logs on the system where the clearinghouse resides to determine the cause of the error. Verify the corruption. If any of the clearinghouse database files are missing, the clearinghouse cannot be recovered. Use the **set directory to new epoch** command to rebuild the replica sets of the directories that stored a replica in the corrupted clearinghouse. This permits CDS to complete skulks of these directories. To restore the clearinghouse, create a new clearinghouse and repopulate it with the same directories (of the same replica types) that the corrupted clearinghouse originally contained.

0x10d0a89d CDS_EMPTY

Severity: Varies **Component:** cds

Text: Empty set.

Explanation: During a clerk Enumerate or ReadAttrValue, all the values have been returned.

Action: None required.

0x10d0a3f3 CDS_ENTRYEXISTS

Severity: Varies **Component:** cds

Text: Specified full name already exists

Explanation: You cannot create the name that you specified because an identical name already exists in the namespace.

Action: Make sure that the full name you specified is actually the name you intended to create. If it is, you must choose another name that does not already exist in the namespace.

0x10d0afff CDS_ERROR

Severity: Varies **Component:** cds

Text: An error occurred calling a CDS API function.

Explanation: An error occurred calling a CDS API function.

Action: Examine the arguments returned in the flagstat to determine the actual cause of the problem.

0x10d0afd3 CDS_GDB_ERROR

Severity: Varies **Component:** cds

Text: Error return from gdb_* function.

Explanation: Error return from gdb_* function.

Action: Check the in-line documentation for the function for specific meaning.

0x10d0afd7 CDS_GDB_EXISTS

Severity: Varies **Component:** cds

Text: The specified entry exists in the database

Explanation: The specified entry exists in the database

Action: None.

0x10d0afd5 CDS_GDB_NO_SECONDARY

Severity: Varies **Component:** cds

Text: No secondary index has been created already on this database

Explanation: No secondary index has been created already on this database

Action: Verify that you aren't trying specify a secondary index.

0x10d0afd6 CDS_GDB_NOT_FOUND

Severity: Varies **Component:** cds

Text: Reached end of database without being able to satisfy request.

Explanation: Reached end of database without being able to satisfy request.

Action: Depending on if this is in response to a sequential lookup or a specific entry lookup, specifies the entry doesn't exist, or end of database.

0x10d0afd4 CDS_GDB_SECONDARY

Severity: Varies **Component:** cds

Text: A secondary index has been created already on this database

Explanation: A secondary index has been created already on this database

Action: Don't create secondary index. Include secondary index on all inserts

0x10d0a3e9 CDS_INVALIDARGUMENT

Severity: Varies **Component:** cds

Text: Invalid argument

Explanation: An invalid argument was passed to a cds API routine.

Action: Check the calling routine.

0x10d0a3ea CDS_INVALIDNAME

Severity: Varies **Component:** cds

Text: Invalid name

Explanation: The command you entered may contain misspelled words, illegal characters, or other typographical errors. You may have included extraneous words or omitted required node, option, or argument specifications. Command arguments and options may not appear in proper sequence.

Action: Invoke CDS online help or refer to the **DCE Administration Reference** for a description of proper syntax for the command you are trying to use. Reenter your command correctly.

0x10d0a3f7 CDS_INVALIDUPDATE

Severity: Varies **Component:** cds

Text: Specified attribute cannot be modified

Explanation: You attempted to change the value of an attribute that cannot be modified.

Action: None required.

0x10d0a45f CDS_LOWDIRVERSION

Severity: Varies **Component:** cds

Text: For cellname commands, the CDS_DirectoryVersion attribute is required to be 4.0 or greater.

Explanation: Directory version does not support this feature.

Action: See the documentation on how to upgrade the directory version of a directory.

0x10d0a45a CDS_MISSING_ALLUPTO

Severity: Varies **Component:** cds

Text: Unable to modify the cell aliases because the root directory is missing the AllUpTo attribute.

Explanation: This is a highly unusual situation and may be a signal that there are other problems with the Cell Directory Service.

Action: Try skulking the root directory of the cell.

0x10d0a461 CDS_MISSING_DIRECTORYVERSION

Severity: Varies **Component:** cds

Text: Unable to modify the cell aliases because the root directory is missing the DirectoryVersion attribute.

Explanation: This is a highly unusual situation and may be a signal that there are other problems with the Cell Directory Service.

Action: Try skulking the root directory of the cell.

0x10d0a406 CDS_MORETHANONEREPLICA

Severity: Varies **Component:** cds

Text: Replica set of specified directory contains more than one replica

Explanation: You tried to delete a directory whose replica set still contains one or more read-only replicas.

Action: Enter the **show directory** command and specify the **CDS_Replicas** attribute to display a list of the clearinghouses that contain replicas of the directory. You must delete all read-only replicas before you can delete the directory's master replica.

0x10d0a45c CDS_MULT_PREFERRED

Severity: Varies **Component:** cds

Text: Multiple primary aliases have been detected in the CDS_CellAliases attribute.

Explanation: This should not happen.

Action: Call your support people.

0x10d0a7cf CDS_NAMESERVERBUG

Severity: Varies **Component:** cds

Text: Software error detected in server

Explanation: CDS detected a software error in a server.

Action: This error may indicate a serious problem in the server running on the system that receives the message. However, if CDS service is not interrupted, and even if the error recurs, wait at least 24 hours before taking any action. For a server,

the 24-hour waiting period allows sufficient time for CDS to complete skulks of all the directories stored in the server's clearinghouse. Often, the skulking process solves the problem causing the error. If, after 24 hours, the error messages continue to occur, or if CDS service is interrupted, contact your software supplier.

0x10d0a40b CDS_NEWVERSIONSKEW

Severity: Varies **Component:** cds

Text: Old replica cannot be included in new replica set

Explanation: An attempt was made to add an older directory replica into a newer replica set; the older replica will not recognize newer acl formats.

Action: Upgrade the old clearinghouse or be content with what you have.

0x10d0a3ec CDS_NOCOMMUNICATION

Severity: Varies **Component:** cds

Text: Unable to communicate with any CDS server

Explanation: The clerk from which you issued your command was unable to communicate with any CDS server capable of processing your request.

Action: Verify connectivity to an appropriate server system. Make sure that the server is running. Make sure that at least one clearinghouse that stores a replica of the directory you want to access is reachable and is running.

0x10d0a3eb CDS_NONSRESOURCES

Severity: Varies **Component:** cds

Text: Insufficient local resources

Explanation: The local system was unable to provide adequate memory or communications resources to process your request.

Action: Monitor the available memory and check system log files to determine the current availability of system resources. If necessary, allocate additional resources.

0x10d0a464 CDS_NOPREFERRED_EXISTS

Severity: Varies **Component:** cds

Text: There is no existing primary alias for the local cell.

Explanation: To create a hierarchical cell relationship, the child cell must have its primary alias set.

Action: Set the primary alias for the local cell.

0x10d0a7e9 CDS_NOROOM

Severity: Varies **Component:** cds

Text: Insufficient room in buffer

Explanation: The supplied buffer is not large enough to hold the requested item.

Action: Supply a larger buffer (usually a correct size will be returned).

0x10d0a400 CDS_NOTAGROUP

Severity: Varies **Component:** cds

Text: Not a group

Explanation: A **TestGroup** operation was tried on an object whose class was not **CDS_Group**.

Action: Specify the right group.

0x10d0a457 CDS_NOT_AN_ALIAS

Severity: Varies **Component:** cds

Text: The name provided was not an alias or the current cell name.

Explanation: The name provided is either for another cell or referred to the current primary name of the cell.

Action: Check that the name provided is a cell alias (not primary) of the current cell.

0x10d0a3f9 CDS_NOTAREPLICA

Severity: Varies **Component:** cds

Text: Specified clearinghouse does not contain a copy of the directory

Explanation: The clearinghouse you specified in the command does not contain a replica of the directory you are trying to access.

Action: Enter the show directory command and specify the **CDS_Replicas** attribute to display the names of the clearinghouses that contain a replica of the directory you are trying to access. Reenter your original command and specify a clearinghouse that stores a replica of the target directory.

0x10d0a451 CDS_NOTCHDIRECTORY

Severity: Varies **Component:** cds

Text: Specified directory does not allow clearinghouse name storage

Explanation: The directory where the new clearinghouse is to be located does not have CDS_InCHName set to 1.

Action: This should never happen. All clearinghouses are registered under the root directory. Change the name of the clearinghouse.

0x10d0a3fc CDS_NOTEMPTY

Severity: Varies **Component:** cds

Text: Directory must be empty to be deleted

Explanation: You attempted to delete a directory that still contains entries.

Action: Delete the contents of the directory before you reenter the delete directory command.

0x10d0a3f6 CDS_NOTIMPLEMENTED

Severity: Varies **Component:** cds

Text: Requested optional function is not implemented in this release

Explanation: You entered a command requesting an operation that is supported by the current version of the CDS architecture, but is defined as optional and has not been implemented in this release of the CDS software.

Action: None required.

0x10d0a456 CDS_NOTINCELL

Severity: Varies **Component:** cds

Text: The name provided is not a part of the current cell.

Explanation: In translating a global name to a cell-relative name, the global name provided is for another cell.

Action: Check that the global name specifies one of the current cell aliases in its name.

0x10d0a3fd CDS_NOTLINKED

Severity: Varies **Component:** cds

Text: Specified name exists but is not a soft link

Explanation: The name that you specified exists in the namespace but is not a soft link.

Action: Use the list link command to display the names of all the soft links in the appropriate directory. Reenter your command and specify the correct name of the soft link that you are trying to access.

0x10d0a463 CDS_NOTPREFERREDHIERARCHY

Severity: Varies **Component:** cds

Text: The proposed parent name is not its cellname or primary alias.

Explanation: Incorrect parent name specified.

Action: Verify that the parent name indeed exists.

0x10d0a450 CDS_NOTROOT

Severity: Varies **Component:** cds

Text: This operation must be performed on the master copy of root directory

Explanation: You entered a command requesting an operation that must be directed to the clearinghouse that stores the master replica of the root directory.

Action: Enter the **show directory** command for the root directory and specify the **CDS_Replicas** attribute to determine the name and location of the clearinghouse that stores the master replica. Reenter your original command and specify that clearinghouse.

0x10d0a3f5 CDS_NOTSUPPORTED

Severity: Varies **Component:** cds

Text: Requested function not supported by this version of architecture.

Explanation: The operation being tried cannot be done because the functionality is not supported.

Action: Version mismatch. Either the server or client software must be upgraded.

0x10d0a408 CDS_OLDSKULK

Severity: Varies **Component:** cds

Text: Skulk in progress terminated; superseded by more recent skulk.

Explanation: A skulk in progress contacted a replica and found that the replica was modified by a more recent skulk. The skulk in progress terminates.

Action: None required.

0x10d0a003 CDS_PENDING

Severity: Varies **Component:** cds

Text: Operation in progress.

Explanation: This status is placed in the control block while the associated request is being acted upon by the cds clerk.

Action: The request is in progress. If you wish to terminate it, kill the thread which is blocked waiting for the request to complete.

0x10d0a3fe CDS_POSSIBLECYCLE

Severity: Varies **Component:** cds

Text: Possible cycle in soft links detected

Explanation: While traversing soft links, the cds clerk has encountered the same entry twice.

Action: Use the **show link** command to view the **CDS_LinkTarget** attribute of each soft link in the chain. When the target value is the same as a softlink you have already seen, use the **set link** command to change the value.

0x10d0a458 CDS_PREFERRED_EXISTS

Severity: Varies **Component:** cds

Text: You cannot supersede a primary cell alias with a normal cell alias of the same name.

Explanation: See text?

Action: Either choose an alias different from the primary alias, or change the primary alias for the cell

0x10d0a972 CDS_PROPAGATE_FAIL

Severity: Varies **Component:** cds

Text: For high convergence Tue Oct 16 09:43:06 1990

Explanation: Background propagation failed.

Action: Look for reasons in the serviceability log.

0x10d0a45b CDS_REM_NOT_SAFE

Severity: Varies **Component:** cds

Text: You cannot remove an alias until the primary alias is considered 'safe'.

Explanation: CDS must be certain that the primary alias of a cell is known to all clearinghouses in the cell before it can accept remove transactions to the alias list. This assures that all CDS servers in the cell will operate in a consistent manner.

Action: Try skulking the cell root directory. It must complete successfully for the remove command to complete.

0x10d0a7d1 CDS_RESOURCEERROR

Severity: Varies **Component:** cds

Text: Insufficient resources to process request

Explanation: This error is returned when memory is not available to complete an operation.

Action: Check the system swap space.

0x10d0a452 CDS_ROOTLOST

Severity: Varies **Component:** cds

Text: Requested operation would result in lost connectivity to root directory

Explanation: You entered a command requesting an operation that would have resulted in a loss of connectivity with the root of the namespace. CDS cannot process your request.

Action: None required.

0x10d0aba3 cds_s_aclfail

Severity: Warning **Component:** cds/cds_svc_general

Text: Unable to create default acl: status = %ld.

Explanation: Failed to get host and cell information to initialize acl.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0aba0 cds_s_aclinit

Severity: Error **Component:** cds/cds_svc_general

Text: Can't initialize GENERAL managment ACL.

Explanation: An error has occured while trying to do the initialization.

Action: See serviceability log for a description of the function which failed.

0x10d0aba2 cds_s_aclwrite

Severity: Warning **Component:** cds/cds_svc_general

Text: Unable to save acl.

Explanation: An error occured trying to create the default ACL.

Action: Ensure enough disk space exists for /opt/dcelocal/var/adm/directory/cds.

0x10d0a154 cds_s_addcell_cellinfo

Severity: Varies **Component:** cds

Text: Error trying to obtain cell information for X.500: status = %ld.

Explanation: The **X500_addcell** utility could not read cell details from the directory. The status code indicates the reason.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0a157 cds_s_addcell_entryexists

Severity: Varies **Component:** cds

Text: Entry %s exists and has been modified in X.500

Explanation: The cell entry that **x500_addcell** was attempting to write to the x500 directory already existed in that directory. The existing entry was overwritten.

Action: None required.

0x10d0a156 cds_s_addcell_nameobj

Severity: Varies **Component:** cds

Text: Failure converting name to X.500 object.

Explanation: Error occurred converting incoming X.500 name.

Action: Fix the cell name used in the request. Not valid.

0x10d0a158 cds_s_addcell_om

Severity: Varies **Component:** cds

Text: Object Manager %s call failed: status = %ld.

Explanation: A call to the specified function failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0a159 cds_s_addcell_success

Severity: Varies **Component:** cds

Text: Added entry %s to X.500

Explanation: The specified cell entry was successfully added to the X.500 directory.

Action: None required.

0x10d0a155 cds_s_addcell_workspace

Severity: Varies **Component:** cds

Text: Workspace initialization failed.

Explanation: Unable to initialize X.500 workspace.

Action: Ensure X.500 client and server are running.

0x10d0a15b cds_s_addcell_xds_error

Severity: Varies **Component:** cds

Text: %s returned error : status = %ld

Explanation: An error occurred in the specified function.

Action: See the indicated status code for additional detail. The status code are documented in this manual.

0x10d0a15c cds_s_addcell_xds_unknown

Severity: Varies **Component:** cds

Text: %s failed for unknown reason.

Explanation: The XOM or XDS call failed and the error could not be decoded.

Action: See the manual pages for the indicated function for additional detail.

0x10d0a2c9 cds_s_adver_aclfail

Severity: Warning **Component:** cds/cds_svc_adver

Text: Unable to create default acl: status = %ld.

Explanation: Failed to get host and cell information to initialize acl.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0a2c5 cds_s_adver_aclinit

Severity: Error **Component:** cds/cds_svc_adver

Text: Can't initialize clerk management ACL.

Explanation: An error has occurred while trying to do the initialization.

Action: See serviceability log for a description of the function which failed.

0x10d0a2c8 cds_s_adver_aclwrite

Severity: Warning **Component:** cds/cds_svc_adver

Text: Unable to save acl: status = %ld.

Explanation: An error occurred trying to create the default ACL.

Action: Ensure enough disk space exists for /opt/dcelocal/var/adm/directory/cds.

0x10d0a2c4 cds_s_adver_badadver

Severity: Warning **Component:** cds/cds_svc_adver

Text: Bad CDS Advertisement received

Explanation: An invalid advertisement message was received. It will be ignored.

Action: Attempt to find the server send out the bad messages.

0x10d0a2bf cds_s_adver_bind

Severity: Error **Component:** cds/cds_svc_adver

Text: Routine bind(2) failed on childsocket '%s' : errno = %ld.

Explanation: Unable to bind to the socket which allows communication between the advertiser & it's child.

Action: See the bind(2) and errno man page.

0x10d0a2bd cds_s_adver_cache_a

Severity: Fatal **Component:** cds/cds_svc_adver

Text: Can't initialize shared memory cache.

Explanation: An attempt to load the cache has returned an error.

Action: See the servicability log for more errors related to the cache.

0x10d0a2c6 cds_s_adver_eb

Severity: Fatal **Component:** cds/cds_svc_adver

Text: The advertiser is exiting due to an unexpected event.

Explanation: Received an error return and cannot recover.

Action: Check the servicability log for further error messages.

0x10d0a2c3 cds_s_adver_eg

Severity: Notice **Component:** cds/cds_svc_child

Text: Normal Successful exit due to expected signal.

Explanation: The advertiser has successfully exited.

Action: None required.

0x10d0a2c2 cds_s_adver_execve

Severity: Fatal **Component:** cds/cds_svc_adver

Text: Unable to start execution of the child: errno = %ld.

Explanation: Unable to start execution of the child - This causes the advertiser to exit .

Action: See the execve(2) and errno man page.

0x10d0a2c1 cds_s_adver_fork

Severity: Error **Component:** cds/cds_svc_adver

Text: Unable to fork clerk process: errno = %ld.

Explanation: Unable to fork to create the child process

Action: See the fork(2) and errno man page.

0x10d0a2cb cds_s_adver_groupfail

Severity: Error **Component:** cds/cds_svc_adver

Text: Unable to create default acl. Can't get group uuid. status = %ld.

Explanation: Failed to get host uuid to initialize acl.

Action: See the indicated sec_rgy status code for additional detail. The status codes are documented in this manual.

0x10d0a2ca cds_s_adver_hostfail

Severity: Error **Component:** cds/cds_svc_adver

Text: Unable to create default acl: Can't get host uuid. status = %ld.

Explanation: Failed to get host uuid to initialize acl.

Action: See the indicated sec_rgy status code for additional detail. The status codes are documented in this manual.

0x10d0a2c0 cds_s_adver_listen

Severity: Error **Component:** cds/cds_svc_adver

Text: Routine listen(2) failed on childsocket '%s' : errno = %ld.

Explanation: Unable to listen on the socket which allows communication between the advertiser & it's child.

Action: See the listen(2) and errno man page.

0x10d0a2cd cds_s_adver_mkfifo

Severity: Error **Component:** cds/cds_svc_adver

Text: Routine mkfifo(2) failed on child fifo '%s' : errno = %ld.

Explanation: Unable to create fifo which allows communication between the advertiser & it's child.

Action: See the mkfifo(2) and errno man page.

0x10d0a2c7 cds_s_adver_noacl

Severity: Notice **Component:** cds/cds_svc_adver

Text: No acl file existed - Creating a default ACL

Explanation: No ACL file existed -> creates an ACL and writes it out.

Action: None required.

0x10d0a2ce cds_s_adver_open

Severity: Error **Component:** cds/cds_svc_adver

Text: Routine open(2) failed on child fifo '%s' : errno = %ld.

Explanation: Unable to open fifo which allows communication between the advertiser & it's child.

Action: See the open(2) and errno man page.

0x10d0a2cf cds_s_adver_routing

Severity: Error **Component:** cds/cds_svc_adver

Text: Unable to set message routing for clerk command line argument : status = %ld.

Explanation: A call to **dce_svc_routing** failed when starting a new clerk. This is not a fatal error however future debugging information from the clerk process may not be complete.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0a2be cds_s_adver_socket

Severity: Error **Component:** cds/cds_svc_adver

Text: Routine socket(2) failed to create child socket : errno = %ld

Explanation: Unable to create the socket which allows communication between the advertiser & it's child.

Action: See the socket(2) and errno man page.

0x10d0a2cc cds_s_adver_startup

Severity: Notice **Component:** cds/cds_svc_adver

Text: CDS Advertiser Starting.

Explanation: Displayed to show the user that the advertiser is starting -> time/date information of the start-up can be gained from the preamble of this message that the SVC code adds to this text.

Action: None required.

0x10d0ab5b cds_s_alloc

Severity: Error **Component:** cds/cds_svc_general

Text: Unable to allocate more memory.

Explanation: A call to the function to allocate dynamic memory failed.

Action: The process is running out of virtual memory. Increase your sway space.

0x10d0ab5c cds_s_alloc_a

Severity: Fatal **Component:** cds/cds_svc_general

Text: Unable to allocate more memory.

Explanation: A call to the function to allocate dynamic memory failed.

Action: The process is running out of virtual memory. Increase your swap space.

0x10d0ab98 cds_s_bad_acl_init_obj

Severity: Error **Component:** cds/cds_svc_general

Text: dce_acl_obj_init returned status %ld : %s

Explanation: A call to dce_acl_obj_init has failed.

Action: Restart cds

0x10d0ab9b cds_s_bad_add_any_acl

Severity: Error **Component:** cds/cds_svc_general

Text: dce_acl_obj_add_any_other_entry returned status %ld : %s

Explanation: A call to dce_acl_obj_add_any_other_entry has failed.

Action: Restart cds

0x10d0ab9a cds_s_bad_add_group_acl

Severity: Error **Component:** cds/cds_svc_general

Text: dce_acl_obj_add_group_entry returned status %ld : %s

Explanation: A call to dce_acl_add_group_entry has failed.

Action: Restart cds

0x10d0ab9c cds_s_bad_add_unauth_acl

Severity: Error **Component:** cds/cds_svc_general

Text: dce_acl_obj_add_unauth_entry returned status %ld : %s

Explanation: A call to dce_acl_obj_add_unauth_entry has failed.

Action: Restart cds

0x10d0ab99 cds_s_bad_add_user_acl

Severity: Error **Component:** cds/cds_svc_general

Text: dce_acl_obj_add_user_entry returned status %ld : %s

Explanation: A call to dce_acl_obj_add_user_entry has failed.

Action: Restart cds

0x10d0ab97 cds_s_bad_register_obj

Severity: Error **Component:** cds/cds_svc_general

Text: dce_acl_register_object_type returned status %ld : %s

Explanation: A call to the function dce_acl_register_object_type has failed.

Action: Restart cds

0x10d0ab96 cds_s_bad_rpc_alloc

Severity: Error **Component:** cds/cds_svc_general

Text: rpc_sm_enable_alloc returned status %ld : %s

Explanation: A call to the system function rpc_sm_enable_alloc has failed.

Action: See the rpc_sm_enable_alloc manual page for further details

0x10d0a076 cds_s_cache_badcacheheader

Severity: Error **Component:** cds/cds_svc_cache

Text: Bad header size in cache file %s

Explanation: Routine **read(2)** returned a value less than the number of bytes required. A new cache will be created.

Action: Ensure free disk space is sufficient so the cache can be reused the next time DCE is started.

0x10d0a06a cds_s_cache_badheaderid

Severity: Warning **Component:** cds/cds_svc_cache

Text: Bad data in shmid file %s, data: %s

Explanation: While attempting to verify the contents of the **shmid** file, an error occurred. A new shared memory segment will be created.

Action: None required.

0x10d0a073 cds_s_cache_badversion

Severity: Error **Component:** cds/cds_svc_cache

Text: Bad data in cache version file %s.

Explanation: The version file is smaller than expected. A new cache will be created.

Action: Ensure the directory is accessible so the cache can be reused the next time DCE is started.

0x10d0a080 cds_s_cache_blink_a

Severity: Fatal **Component:** cds/cds_svc_cache

Text: Cache header corrupt: Bad cache header backward link.

Explanation: The backward link of the cache header does not point to the correct place.

Action: Have a DCE support person examine the file. Delete the cache and restart the advertiser.

0x10d0a078 cds_s_cache_cachesize

Severity: Warning **Component:** cds/cds_svc_cache

Text: Cache size of %d is incorrect - deleting cache files

Explanation: Cache size returned by CA_SysSize differs from ca_size field of cache. A new cache will be created.

Action: None required.

0x10d0a089 cds_s_cache_carefs_a

Severity: Fatal **Component:** cds/cds_svc_cache

Text: Could not insert element into LRU list, element already on LRU list.

Explanation: call to CA_refs showed that the element was already on LRU.

Action: Have a DCE support person examine the file. Delete the cache and restart the advertiser.

0x10d0a083 cds_s_cache_clock_a

Severity: Fatal **Component:** cds/cds_svc_cache

Text: Could not allocate space in client cache, expected lock is not held.

Explanation: The cache caller did not hold a write lock on the client cache.

Action: Have a DCE support person examine the file. Delete the cache and restart the advertiser.

0x10d0a07a cds_s_cache_createcache

Severity: Error **Component:** cds/cds_svc_cache

Text: Error opening cache version file %s for write: status = %ld.

Explanation: Routine **open(2)** failed while trying to create cache file.

Action: Ensure that a writable file can be created in the specified location, see error status for further information.

0x10d0a067 cds_s_cache_createshmid

Severity: Warning **Component:** cds/cds_svc_cache

Text: Routine **open(2)** failed for shmid file %s with status %ld.

Explanation: While attempting to create the **shmid** file, an error occurred. The **shmid** file was not created. A new memory segment will be created.

Action: Ensure that the specified directory exists and is writable.

0x10d0a071 cds_s_cache_createversion

Severity: Error **Component:** cds/cds_svc_cache

Text: Error opening cache version file %s for write: status = %ld.

Explanation: Routine **open(2)** failed while trying to create cache version file.

Action: Ensure that a writable file can be created in the specified location, see error status for further information.

0x10d0a06c cds_s_cache_creatormapped

Severity: Warning **Component:** cds/cds_svc_cache

Text: shmid(%d) creator process pid(%d) is still active.

Explanation: An old advertiser process has been terminated and shared memory has been marked for delete.

Action: None required.

0x10d0a07f cds_s_cache_flink_a

Severity: Fatal **Component:** cds/cds_svc_cache

Text: Cache header corrupt: Bad cache header forward link.

Explanation: The forward link of the cache header does not point to the correct place.

Action: Have a DCE support person examine the file. Delete the cache and restart the advertiser.

0x10d0a084 cds_s_cache_glock_a

Severity: Fatal **Component:** cds/cds_svc_cache

Text: Could not allocate space in global cache, expected lock is not held.

Explanation: The cache caller did not hold a write lock on the global cache.

Action: Have a DCE support person examine the file. Delete the cache and restart the advertiser.

0x10d0a07c cds_s_cache_header_a

Severity: Fatal **Component:** cds/cds_svc_cache

Text: Cache header corrupt: Bad cache header address.

Explanation: Offset of cache header address is not valid.

Action: Have a DCE support person examine the file. Delete the cache and restart the advertiser.

0x10d0a086 cds_s_cache_inlist_a

Severity: Fatal **Component:** cds/cds_svc_cache

Text: Could not into a linked list, already in list.

Explanation: An element has a forward or backward link which is not null.

Action: Have a DCE support person examine the file. Delete the cache and restart the advertiser.

0x10d0a06b cds_s_cache_inuse

Severity: Warning **Component:** cds/cds_svc_cache

Text: Cannot access memory data, shmid(%d) has %d users.

Explanation: The shared memory segment still has users mapped to it. It will be marked for delete.

Action: None required.

0x10d0a07e cds_s_cache_inuse_a

Severity: Fatal **Component:** cds/cds_svc_cache

Text: Cache header corrupt: Bad cache header in use flag.

Explanation: The cache header 'inuse' field contains a value other than 1 or 0.

Action: Have a DCE support person examine the file. Delete the cache and restart the advertiser.

0x10d0a08a cds_s_cache_islocked_a

Severity: Fatal **Component:** cds/cds_svc_cache

Text: Failed to obtain lock, semaphore operation structure already locked

Explanation: could not carry out semaphore operation to obtain a lock on the cache because the sem_op field of the semaphore operation structure was set to CA_SEM_LOCKED.

Action: Have a DCE support person examine the file. Delete the cache and restart the advertiser.

0x10d0a085 cds_s_cache_llock_a

Severity: Fatal **Component:** cds/cds_svc_cache

Text: Could not insert cache header into freelist, expected lock is not held.

Explanation: The cache caller did not hold a lock on the freelist.

Action: Have a DCE support person examine the file. Delete the cache and restart the advertiser.

0x10d0a08b cds_s_cache_nolocked_a

Severity: Fatal **Component:** cds/cds_svc_cache

Text: Failed to release lock, semaphore operation structure not locked

Explanation: could not carry out semaphore operation to release lock on the cache because the sem_op field of the semaphore operation structure was not set to CA_SEM_LOCKED.

Action: Have a DCE support person examine the file. Delete the cache and restart the advertiser.

0x10d0a087 cds_s_cache_notinlist_a

Severity: Fatal **Component:** cds/cds_svc_cache

Text: Could not remove element from freelist, element is not in list,

Explanation: The cache header forward or backward link is null.

Action: Have a DCE support person examine the file. Delete the cache and restart the advertiser.

0x10d0a088 cds_s_cache_notinuse_a

Severity: Fatal **Component:** cds/cds_svc_cache

Text: Could not move cache block onto freelist, cache header is not in use.

Explanation: The 'inuse' field of the cache header is set to 0

Action: Have a DCE support person examine the file. Delete the cache and restart the advertiser.

0x10d0a077 cds_s_cache_oldversion

Severity: Notice **Component:** cds/cds_svc_cache

Text: Cache version is not current, deleting cache files.

Explanation: Software has been upgraded and the existing cache files are no longer usable. The cache files will be deleted and a new cache created.

Action: None required.

0x10d0a074 cds_s_cache_opencache

Severity: Error **Component:** cds/cds_svc_cache

Text: Error opening cache file %s for read: status = %ld.

Explanation: Routine **open(2)** failed. A new cache will be created.

Action: Ensure the directory is accessible so the cache can be reused the next time DCE is started.

0x10d0a068 cds_s_cache_openshmid

Severity: Warning **Component:** cds/cds_svc_cache

Text: Routine **open(2)** failed for shmid file %s with status %ld.

Explanation: While attempting to open an existing **shmid** file, an error occurred. A new shared memory segment will be created.

Action: Ensure that the file is not locked by another user.

0x10d0a07d cds_s_cache_pattern_a

Severity: Fatal **Component:** cds/cds_svc_cache

Text: Cache header corrupt: Bad cache header pattern.

Explanation: Cache header pattern is different from the expected value.

Action: Have a DCE support person examine the file. Delete the cache and restart the advertiser.

0x10d0a075 cds_s_cache_readcache

Severity: Error **Component:** cds/cds_svc_cache

Text: Error reading cache file %s: status = %ld.

Explanation: Routine **read(2)** returned an error status. A new cache will be created.

Action: Ensure the directory is accessible so the cache can be reused the next time DCE is started.

0x10d0a069 cds_s_cache_readshmid

Severity: Warning **Component:** cds/cds_svc_cache

Text: Routine **read(2)** failed for shmid file %s with status %ld.

Explanation: While attempting to read an existing **shmid** file, an error occurred. A new shared memory segment will be created.

Action: Ensure that the specified file exists and is readable.

0x10d0a072 cds_s_cache_readversion

Severity: Error **Component:** cds/cds_svc_cache

Text: Error reading cache version file %s: status = %ld.

Explanation: Routine **read(2)** returned a error status. A new cache will be created.

Action: Ensure the directory is accessible so the cache can be reused the next time DCE is started.

0x10d0a06f cds_s_cache_reuseid

Severity: Notice **Component:** cds/cds_svc_cache

Text: shmid(%d) reassigned to another process.

Explanation: Another process has the shared memory id, possibly as a result of the system being rebooted. A new shared memory id will be allocated.

Action: None required.

0x10d0a06e cds_s_cache_rmid

Severity: Warning **Component:** cds/cds_svc_cache

Text: shmid(%d) removed.

Explanation: The shared memory identifier has been removed because it has an unexpected shm_nattch value. The advertiser terminated unexpectedly prior to terminating clerk processes.

Action: None required.

0x10d0a064 cds_s_cache_semop

Severity: Fatal **Component:** cds/cds_svc_cache

Text: Routine **semop(2)** failed: %s.

Explanation: The **semop(2)** routine returned a system errno value other than EINTR.

Action: See the **semop(2)** manual page for further details about the semaphore operation error. Delete the cache and restart the advertiser.

0x10d0a070 cds_s_cache_shmidremove

Severity: Notice **Component:** cds/cds_svc_cache

Text: shmid file %s unlinked.

Explanation: Removed the shared memory id file before trying to write to it again.

Action: None required.

0x10d0a07b cds_s_cache_snapshot_file

Severity: Notice **Component:** cds/cds_svc_cache

Text: Cache snapshot has been written to file %s.

Explanation: Cache corruption has been detected, and the flawed cache has been checkpointed.

Action: Have a DCE support person examine the file. Delete the cache and restart the advertiser.

0x10d0a065 cds_s_cache_toosmall

Severity: Error **Component:** cds/cds_svc_cache

Text: Could not initialize cache: Cache size is too small to continue.

Explanation: The cache was too small to initialize.

Action: Increase the maximum shared memory size configured in the system.

0x10d0a081 cds_s_cache_type_a

Severity: Fatal **Component:** cds/cds_svc_cache

Text: Cache header corrupt: Bad cache header type.

Explanation: The type field of the cache header contains a value that does not correspond to a known type.

Action: Have a DCE support person examine the file. Delete the cache and restart the advertiser.

0x10d0a06d cds_s_cache_usermapped

Severity: Warning **Component:** cds/cds_svc_cache

Text: shmid(%d) creator process died, clerk processes may still be active

Explanation: An old shared memory segment is being marked for delete. Old clerk processes are still mapped to it. The original advertiser has terminated unexpectedly.

Action: None required.

0x10d0a082 cds_s_cache_version_a

Severity: Fatal **Component:** cds/cds_svc_cache

Text: Cache corrupt: Bad cache version number or name.

Explanation: The cache contains an unexpected value for the ca_version (major version or minor version), or the ca_id field.

Action: Have a DCE support person examine the file. Delete the cache and restart the advertiser.

0x10d0a079 cds_s_cache_writecache

Severity: Error **Component:** cds/cds_svc_cache

Text: Deleting cache file %s due to write errors. Failed to write remaining %d bytes. status: %s

Explanation: Routine **write(2)** failed while writing cache to disk. Cache has been deleted.

Action: Ensure that a writable file can be created in the specified location, check that sufficient free disk space exists, see error status for further information.

0x10d0a066 cds_s_cache_writeshmid

Severity: Warning **Component:** cds/cds_svc_cache

Text: Routine **write(2)** failed for shmid file %s with status %ld.

Explanation: While attempting to execute a **write(2)** routine, there was an error. The memory id was not written to the **shmid** file, nor was the time indicating the last change to the memory segment. A new memory segment will be created.

Action: Ensure that directory is writable.

0x10d0ab54 cds_s_cfgetcellname

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **dce_cf_get_cell_name** failed : status = %ld.

Explanation: A call to **dce_cf_get_cell_name** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab55 cds_s_cfgethostname

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **dce_cf_get_host_name** failed : status = %ld.

Explanation: A call to **dce_cf_get_host_name** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab56 cds_s_cfprinnamefromhost

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **dce_cf_prin_name_from_host** failed : status = %ld.

Explanation: A call to **dce_cf_prin_name_from_host** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0a1f5 cds_s_child_badshmem_eb

Severity: Fatal **Component:** cds/cds_svc_child

Text: Shared memory id (%d) invalid : status = %ld.

Explanation: The share memory id of the cache (passed to the cdsclerk when it is started) was invalid.

Action: Stop the advertister, remove the shared memory section and restart the advertiser.

0x10d0a1f6 cds_s_child_cacheload_eb

Severity: Fatal **Component:** cds/cds_svc_child

Text: Exiting because of error loading the cache.

Explanation: An error occurred loading the cache. The reason for the failure has been logged as a cache error.

Action: Correct the problem described in the error log.

0x10d0a1fa cds_s_child_exiting_eg

Severity: Notice **Component:** cds/cds_svc_child

Text: Normal Succesfull Exit

Explanation: The cdsclerk has successfully completed & is about to exit.

Action: None required.

0x10d0a1f8 cds_s_child_nocommunication

Severity: Notice **Component:** cds/cds_svc_child

Text: Communication failed to %s. Status = %ld.

Explanation: The clerk in unable to communicate with the server. The server is not available.

Action: Re-start the server for the specified clearinghouse.

0x10d0a1f7 cds_s_child_noshmem_eb

Severity: Fatal **Component:** cds/cds_svc_child

Text: Shared memory id is required.

Explanation: No cache shared memory id was passed to the cdsclerk when it was started.

Action: Stop the advertister, remove the shared memory section and restart the advertiser.

0x10d0a1f4 cds_s_child_servernotmember

Severity: Warning **Component:** cds/cds_svc_child

Text: CDS server principal %s is not a member of group %s.

Explanation: The server the clerk tried to contact was not a member of the group of valied cds server principals.

Action: Ensure the server is a valid nameserver and add the principal name to the register group specified.

0x10d0a1fc cds_s_child_signal_eg

Severity: Notice **Component:** cds/cds_svc_child

Text: Exit due to signal number %d request

Explanation: The child has been instructed to exit by receiving the signal request. For example, the cdsadv (Advertiser) uses signal number 15 (SIGTERM) to terminate the child on occasions.

Action: None required.

0x10d0a1fb cds_s_child_sigwait_eb

Severity: Error **Component:** cds/cds_svc_child

Text: Exit due to signal. sigwait(2) returned system error: %ld.

Explanation: Due to a system error, the child has been instructed to exit. The text parameter to this message should give some indication as to why.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0a1fd cds_s_child_starting

Severity: Notice **Component:** cds/cds_svc_child

Text: CDS Clerk Starting.

Explanation: Displayed to show the user that the clerk is starting -> time/date information of the start-up can be gained from the preamble of this message that the SVC code adds to this text.

Action: None required.

0x10d0aa8c cds_s_dbcmp_1_a

Severity: Fatal **Component:** cds/cds_svc_server

Text: Assertion check failed line %d file %s: Unable to compress level-1 data.

Explanation: A fatal error was detected by the database compression mechanism.

Action: Restart the server and report this problem to your DCE supplier.

0x10d0aa8f cds_s_dbcmp_levelbad_a

Severity: Fatal **Component:** cds/cds_svc_server

Text: Assertion check failed at line %d file %s: Unknown level for the compression context buffer

Explanation: A fatal error was detected by the database compression mechanism.

Action: Restart the server and report this problem to your DCE supplier.

0x10d0aa8d cds_s_dbcmp_nonnullptr_a

Severity: Fatal **Component:** cds/cds_svc_server

Text: Assertion check failed line %d file %s: Last node of level-1 work bucket flushed to disk was non null

Explanation: A fatal error was detected by the database compression mechanism.

Action: Restart the server and report this problem to your DCE supplier.

0x10d0aa92 cds_s_dbcmp_nullctxend_a

Severity: Fatal **Component:** cds/cds_svc_server

Text: Assertion check failed at line %d file %s: (End) Compression context buffer pointer is null

Explanation: A fatal error was detected by the database compression mechanism.

Action: Restart the server and report this problem to your DCE supplier.

0x10d0aa93 cds_s_dbcmp_nullctxfinish_a

Severity: Fatal **Component:** cds/cds_svc_server

Text: Assertion check failed at line %d file %s: (Finish) Compression context buffer pointer is null

Explanation: A fatal error was detected by the database compression mechanism.

Action: Restart the server and report this problem to your DCE supplier.

0x10d0aa90 cds_s_dbcmp_nullctxstart_a

Severity: Fatal **Component:** cds/cds_svc_server

Text: Assertion check failed at line %d file %s: (Start) Compression context buffer pointer is null

Explanation: A fatal error was detected by the database compression mechanism.

Action: Restart the server and report this problem to your DCE supplier.

0x10d0aa91 cds_s_dbcmp_nulctxwrite_a

Severity: Fatal **Component:** cds/cds_svc_server

Text: Assertion check failed at line %d file %s: (Write) Compression context buffer pointer is null

Explanation: A fatal error was detected by the database compression mechanism.

Action: Restart the server and report this problem to your DCE supplier.

0x10d0aa8e cds_s_dbcmp_nullfp_a

Severity: Fatal **Component:** cds/cds_svc_server

Text: Assertion check failed at line %d file %s: Null file pointer.

Explanation: A fatal error was detected by the database compression mechanism.

Action: Restart the server and report this problem to your DCE supplier.

0x10d0aa8b cds_s_dbcmp_toobig_a

Severity: Fatal **Component:** cds/cds_svc_server

Text: Assertion check failed line %d file %s: Unable to return free space to bucket

Explanation: A fatal error was detected by the database compression mechanism.

Action: Restart the server and report this problem to your DCE supplier.

0x10d0aa8a cds_s_dbcmp_treenotnull_a

Severity: Fatal **Component:** cds/cds_svc_server

Text: Assertion check failed at line %d file %s: B-tree is non null

Explanation: A fatal error was detected while trying to remove a record from the database.

Action: Restart the server and report this problem to your DCE supplier.

0x10d0ab59 cds_s_debug_routing_eb

Severity: Error **Component:** cds/cds_svc_general

Text: Unable to set debug routing levels from command line argument : status = %ld.

Explanation: A call to **dce_svc_debug_routing** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab58 cds_s_define_table

Severity: Warning **Component:** cds/cds_svc_general

Text: Unable to setup the in-core message table : status = %ld.

Explanation: A call to **dce_msg_define_msg_table** failed

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0aaae cds_s_delegdirversion

Severity: Error **Component:** cds/cds_svc_server

Text: For delegation support, the CDS_DirectoryVersion attribute is required to be 4.0 or greater.

Explanation: Directory version does not support ACL entries with delegation.

Action: See the documentation on how to upgrade the directory version of a directory.

0x10d0ab9f cds_s_export_thread

Severity: Error **Component:** cds/cds_svc_general

Text: Unable to start export thread. dthread_create returns : %s

Explanation: A call to dthread_create has failed.

Action: See preceding errors logged by library for more detailed information.

0x10d0aab0 cds_s_finddir

Severity: Fatal **Component:** cds/cds_svc_server

Text: Error loading clearinghouse from disk. Cannot find a directory that's in the chdirs attribute, %s.

Explanation: Cannot load directory

Action: Check for database corruption.

0x10d0a14e cds_s_gda_acl_file

Severity: Fatal **Component:** cds/cds_svc_gda

Text: Failed to initialize the Global Directory Agent ACL from file %s

Explanation: An error occurred trying to initialize the gdad management ACL and it's mutex. The gdad exits once this message has been displayed.

Action: Check to see if the indicated file is writable by root. If the file does not exist, ensure there is enough disk space to create the file.

0x10d0a14f cds_s_gda_acl_init

Severity: Fatal **Component:** cds/cds_svc_gda

Text: Failed to initialize the Global Directory Agent ACL : status = %ld

Explanation: An error occurred trying to initialize the gdad management ACL and it's mutex. The gdad exits once this message has been displayed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0a131 cds_s_gda_badchuid

Severity: Error **Component:** cds/cds_svc_gda

Text: Failed converting clearinghouse uuid from global directory : status = %ld.

Explanation: A call to the function **uuid_from_string(3rpc)** has failed.

Action: The clearinghouse uuid stored in either **BIND** or **X500** database is in an incorrect format. Correct it and retry the request.

0x10d0a130 cds_s_gda_badnsuuid

Severity: Error **Component:** cds/cds_svc_gda

Text: Failed converting namespace uuid from global directory : status = %ld.

Explanation: A call to the function **uuid_from_string(3rpc)** has failed.

Action: The namespace uuid stored in either **BIND** or **X500** database is in an incorrect format. Correct it and retry the request.

0x10d0a13a cds_s_gda_badreplicatype

Severity: Error **Component:** cds/cds_svc_gda

Text: Replica type in global directory is neither a Master nor Readonly

Explanation: The replica type in the global directory is incorrect.

Action: Use your global directory administration utilities to correct the entry.

0x10d0a13b cds_s_gda_badtower

Severity: Error **Component:** cds/cds_svc_gda

Text: Invalid tower specification global directory.

Explanation: An error occurred while trying to convert the string binding read from the global directory into protocol tower specification.

Action: Use your global directory administration utilities to correct the entry.

0x10d0a13e cds_s_gda_bind_eb

Severity: Fatal **Component:** cds/cds_svc_gda

Text: Routine **bind(2)** failed on %s: status = %ld.

Explanation: A call to the system function **bind(2)** failed.

Action: See the **bind(2)** manual page for further details.

0x10d0a145 cds_s_gda_class

Severity: Notice **Component:** cds/cds_svc_gda

Text: Line %d of named.ca: class syntax error.

Explanation: An invalid class value was found in named.ca. The line will be ignored.

Action: Manually fix the entry. Restart the GDA for the change to take effect.

0x10d0a132 cds_s_gda_connect

Severity: Error **Component:** cds/cds_svc_gda

Text: Routine **connect(2)** failed : status = %ld.

Explanation: A call to the system function **connect(2)** has failed.

Action: See the **connect(2)** manual page for further details.

0x10d0a147 cds_s_gda_data

Severity: Notice **Component:** cds/cds_svc_gda

Text: Line %d of named.ca: data syntax error.

Explanation: An invalid data value was found in named.ca. The line will be ignored.

Action: Manually fix the entry. Restart the GDA for the change to take effect.

0x10d0a143 cds_s_gda_dname

Severity: Notice **Component:** cds/cds_svc_gda

Text: Line %d of named.ca: DNAME syntax error.

Explanation: An invalid DNAME line was found in named.ca. The line will be ignored.

Action: Manually fix the entry. Restart the GDA for the change to take effect.

0x10d0a12e cds_s_gda_eb

Severity: Error **Component:** cds/cds_svc_gda

Text: An unrecoverable error occurred in Global Directory Agent.

Explanation: Unable to continue processing.

Action: Refer to serviceability log for more details on the specific error.

0x10d0a12f cds_s_gda_eg

Severity: Error **Component:** cds/cds_svc_gda

Text: Global Directory Agent exiting.

Explanation: Shutting down Global Directory Agent.

Action: None required.

0x10d0a14d cds_s_gda_export

Severity: Error **Component:** cds/cds_svc_gda

Text: Failed to export bindings to %s :status = %ld

Explanation: An attempt to export the **servicability** interface to the namespace failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0a141 cds_s_gda_include

Severity: Notice **Component:** cds/cds_svc_gda

Text: Line %d of named.ca: INCLUDE syntax not supported.

Explanation: An INCLUDE line was found in named.ca. This is not supported by the gda and will be ignored.

Action: None required.

0x10d0a14c cds_s_gda_initrpc_eb

Severity: Fatal **Component:** cds/cds_svc_gda

Text: Unable to initialize the RPC interface.

Explanation: An error occurred trying to initialize the RPC interface.

Action: See the serviceability log for more information. The gda will exit.

0x10d0a14b cds_s_gda_initsec_eb

Severity: Fatal **Component:** cds/cds_svc_gda

Text: Can't perform security initialization.

Explanation: An error occurred while trying to initialize Global Directory Agents security parameters.

Action: Refer to the servicability logs for more detail on the specifics of this error.

0x10d0a14a cds_s_gda_inorder

Severity: Warning **Component:** cds/cds_svc_gda

Text: An internal list is out of order. Thread will exit.

Explanation: Unable to add entries to internal list.

Action: None required.

0x10d0a140 cds_s_gda_list_a

Severity: Fatal **Component:** cds/cds_svc_gda

Text: Corruption detection on internal lists.

Explanation: The internal queues are corrupt. Program will abort.

Action: Save the core file and contact your DCE software supplier.

0x10d0a138 cds_s_gda_nodns

Severity: Error **Component:** cds/cds_svc_gda

Text: Bind lookups disabled.

Explanation: The Global Directory Agent has received a request with a BIND name. Bind lookups were disabled when the GDA was started.

Action: Restart the GDA without the -b switch.

0x10d0a137 cds_s_gda_nox500

Severity: Error **Component:** cds/cds_svc_gda

Text: X.500 lookups disabled.

Explanation: The Global Directory Agent has received a request with an X.500 name. X.500 lookups were disabled when the GDA was started.

Action: Restart the GDA without the -x switch.

0x10d0a148 cds_s_gda_option

Severity: Notice **Component:** cds/cds_svc_gda

Text: Line %d of named.ca: Unknown \$ option: %s.

Explanation: An invalid \$ option was found in named.ca. The line will be ignored.

Action: Manually fix the entry. Restart the GDA for the change to take effect.

0x10d0a142 cds_s_gda_origin

Severity: Notice **Component:** cds/cds_svc_gda

Text: Line %d of named.ca: ORIGIN syntax error.

Explanation: An invalid ORIGIN line was found in named.ca. The line will be ignored.

Action: Manually fix the entry. Restart the GDA for the change to take effect.

0x10d0a135 cds_s_gda_read

Severity: Warning **Component:** cds/cds_svc_gda

Text: Routine **read(2)** failed : status = %ld.

Explanation: A call to the system function **read(2)** has failed.

Action: See the **read(2)** manual page for further details.

0x10d0a13f cds_s_gda_recvfrom_eb

Severity: Fatal **Component:** cds/cds_svc_gda

Text: Routine **recvfrom(2)** failed : status = %ld.

Explanation: A call to the system function **recvfrom(2)** failed.

Action: See the **recvfrom(2)** manual page for further details.

0x10d0a136 cds_s_gda_sendto

Severity: Warning **Component:** cds/cds_svc_gda

Text: Routine **sendto(2)** failed : status = %ld.

Explanation: A call to the system function **sendto(2)** has failed.

Action: See the **sendto(2)** manual page for further details.

0x10d0a13d cds_s_gda_socket

Severity: Error **Component:** cds/cds_svc_gda

Text: Routine **socket(2)** failed : status = %ld.

Explanation: A call to the system function **socket(2)** failed.

Action: See the **socket(2)** manual page for further details.

0x10d0a12c cds_s_gda_startup

Severity: Notice **Component:** cds/cds_svc_gda

Text: CDS GDA Starting.

Explanation: Displayed when the Global Directory Agent starts running. Gives the start time and date for future reference in the preamble to this message.

Action: None required.

0x10d0a144 cds_s_gda_ttl

Severity: Notice **Component:** cds/cds_svc_gda

Text: Line %d of named.ca: ttl syntax error.

Explanation: An invalid ttl value was found in named.ca. The line will be ignored.

Action: Manually fix the entry. Restart the GDA for the change to take effect.

0x10d0a146 cds_s_gda_type

Severity: Notice **Component:** cds/cds_svc_gda

Text: Line %d of named.ca: type syntax error.

Explanation: An invalid type value was found in named.ca. The line will be ignored.

Action: Manually fix the entry. Restart the GDA for the change to take effect.

0x10d0a149 cds_s_gda_unsupporteddata

Severity: Notice **Component:** cds/cds_svc_gda

Text: Line %d of named.ca: unsupported data type.

Explanation: An unsupported data type was found in named.ca. The line will be ignored.

Action: Manually fix the entry. Restart the GDA for the change to take effect.

0x10d0a139 cds_s_gda_updatepp

Severity: Fatal **Component:** cds/cds_svc_gda

Text: Can't initialise parent pointer : status = %ld

Explanation: A test to ensure the **GDA_Pointers** attribute of the cell root directory is correct has failed. The GDA will exit.

Action: Ensure the CDS servers are running and that the GDA has write permission to the root directory. Restart the GDA.

0x10d0a13c cds_s_gda_uuidfile_eb

Severity: Fatal **Component:** cds/cds_svc_gda

Text: Can't access gda_id file %s : status = %s.

Explanation: An error has occurred trying to read an existing GDA uuid from the specified file. The GDA will exit when this message appears.

Action: Check that the file is readable and contains a valid UUID.

0x10d0a134 cds_s_gda_write

Severity: Error **Component:** cds/cds_svc_gda

Text: Routine **write(2)** failed : status = %ld.

Explanation: A call to the system function **write(2)** has failed.

Action: See the **write(2)** manual page for further details.

0x10d0a133 cds_s_gda_writev

Severity: Error **Component:** cds/cds_svc_gda

Text: Routine **writev(2)** failed : status = %ld.

Explanation: A call to the system function **writev(2)** has failed.

Action: See the **writev(2)** manual page for further details.

0x10d0afdf cds_s_gdb_begin_xtn

Severity: Fatal **Component:** cds/cds_svc_server

Text: Unable to begin transaction on server database. Status = %ld.

Explanation: Message occurs if server is unable to begin a transaction. Indicates programming error, most likely.

Action: Restart server.

0x10d0afdb cds_s_gdb_changedirstore

Severity: Fatal **Component:** cds/cds_svc_server

Text: Temporary internal database became corrupt. Shutting down server to preserve permanent database. Status = %ld

Explanation: Temporary internal database became corrupt. Shutting down server to preserve permanent database.

Action: Restart server. Only in-memory data was bad, so shouldn't see any problem after restart

0x10d0afe0 cds_s_gdb_commit_xtn

Severity: Fatal **Component:** cds/cds_svc_server

Text: Unable to commit transaction on server database. Status = %ld.

Explanation: Message occurs if server is unable to commit a transaction. Indicates programming error, most likely.

Action: Restart server.

0x10d0afd9 cds_s_gdb_corrupt_db

Severity: Fatal **Component:** cds/cds_svc_server

Text: Corrupt database. No root dir or multiple root dirs

Explanation: Corrupt database. No root dir or multiple root dirs

Action: Check for database corruption.

0x10d0afda cds_s_gdb_corrupt_db_ch

Severity: Fatal **Component:** cds/cds_svc_server

Text: Corrupt database. Bad clearinghouse entry. Status = %ld.

Explanation: Corrupt database. Bad clearinghouse entry

Action: Check for database corruption. Restart the server.

0x10d0afdc cds_s_gdb_corrupt_dirstore

Severity: Fatal **Component:** cds/cds_svc_server

Text: Internal directory store became corrupt. Exiting server to preserve permanent database. Status = %ld

Explanation: Internal directory store became corrupt. Shutting down server to preserve permanent database.

Action: Restart server. Only in-memory data was bad, so shouldn't see any problem after restart

0x10d0afde cds_s_gdb_open_dirstore

Severity: Fatal **Component:** cds/cds_svc_server

Text: Unable to open in-memory database. Status = %ld.

Explanation: Server is unable to open a temporary in-memory database for the directory store

Action: Check protection of tmp directory on disk.

0x10d0afdd cds_s_gdb_open_namespace

Severity: Fatal **Component:** cds/cds_svc_server

Text: Unable to open namespace database. Status = %ld.

Explanation: Message occurs if server is unable to open the database for the namespace

Action: Check protection of namespace files on disk.

0x10d0afe1 cds_s_gdb_rollback_xtn

Severity: Fatal **Component:** cds/cds_svc_server

Text: Unable to rollback transaction on server database. Status = %ld.

Explanation: Message occurs if server is unable to rollback a transaction. Indicates programming error, most likely.

Action: Restart server.

0x10d0aba5 cds_s_groupfail

Severity: Error **Component:** cds/cds_svc_general

Text: Unable to create default acl. Can't get group uuid. status = %ld.

Explanation: Failed to get host uuid to initialize acl.

Action: See the indicated sec_rgy status code for additional detail. The status codes are documented in this manual.

0x10d0aba4 cds_s_hostfail

Severity: Error **Component:** cds/cds_svc_general

Text: Unable to create default acl: Can't get host uuid. status = %ld.

Explanation: Failed to get host uuid to initialize acl.

Action: See the indicated sec_rgy status code for additional detail. The status codes are documented in this manual.

0x10d0aab1 cds_s_insertdirstore

Severity: Fatal **Component:** cds/cds_svc_server

Text: Error loading clearinghouse from disk. Cannot create a directory that's in the chdirs attribute, %s.

Explanation: Cannot load directory that is found in chdirectories

Action: Check for database corruption.

0x10d0a9c9 cds_s_library_alreadyrunning

Severity: Error **Component:** cds/cds_svc_library

Text: Please verify that no other %s is active on this system.

Explanation: The server is already running on this host.

Action: Kill the other process with the same name and try again.

0x10d0a9ca cds_s_library_cd_eg

Severity: Fatal **Component:** cds/cds_svc_library

Text: Can't change to directory %s/%s: errno = %ld.

Explanation: The daemon was unable to change to the directory specified using the chdir(2) system function

Action: See the chdir(2) manual page for further details.

0x10d0a9cb cds_s_library_cdsmalloc_a

Severity: Fatal **Component:** cds/cds_svc_library

Text: Memory fatal in instrumented allocation routines.

Explanation: Fatal error in internal memory allocation routines. The server will abort.

Action: Report this problem to your DCE provider.

0x10d0a9c8 cds_s_library_fork

Severity: Error **Component:** cds/cds_svc_library

Text: Unable to fork child process to execute server: fork(2) failed: errno = %ld.

Explanation: A call to the system function fork(2) failed.

Action: See the fork(2) manual page for further details.

0x10d0a9cd cds_s_library_forkself

Severity: Error **Component:** cds/cds_svc_library

Text: Routine fork(2) failed : errno = %ld.

Explanation: In trying to become a daemon, the fork(2) system function has returned an error

Action: See the fork(2) manual page for further details

0x10d0a9c7 cds_s_library_pipe

Severity: Error **Component:** cds/cds_svc_library

Text: Unable to establish parent/child pipe: pipe(2) failed: errno = %ld.

Explanation: A call to the system function pipe(2) failed.

Action: See the pipe(2) manual page for further details.

0x10d0a9c5 cds_s_library_refresh

Severity: Error **Component:** cds/cds_svc_library

Text: Failed to refresh server identity: status = %ld.

Explanation: Error trying to keep the servers identity current.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0a9c6 cds_s_library_refresh_eb

Severity: Fatal **Component:** cds/cds_svc_library

Text: Failed to refresh server identity: status = %ld.

Explanation: Error trying to keep the servers identity current. The server will exit.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0a9cc cds_s_library_setsid

Severity: Error **Component:** cds/cds_svc_library

Text: Routine setsid(2) failed(%s) trying to set process group id

Explanation: A call to the system function setsid(2) has failed.

Action: See the setsid(2) manual page for further details.

0x10d0a9c4 cds_s_library_threads

Severity: Warning **Component:** cds/cds_svc_library

Text: Thread routine error (at line %d) : %ld.

Explanation: An error has occurred in one of the internal dthread wrapper routines. The caller will determine how to proceed. This should not be seen on a production system.

Action: None required.

0x10d0a9cf cds_s_library_threadbug

Severity: Fatal **Component:** cds/cds_svc_library

Text: Threads package has bugchecked.\nBugcheck code is ... %d\nThreads bug ref# ... %d\nErrno String..... %s\nCurrent thread 0x%x\n

Explanation: The library packaged has bugchecked if this is seen. It gives information which may help in finding the cause.

Action: Contact your DCE software supplier.

0x10d0aba1 cds_s_noacl

Severity: Notice **Component:** cds/cds_svc_general

Text: No acl file existed - Creating a default ACL

Explanation: No ACL file existed -> creates an ACL and writes it out.

Action: None required.

0x10d0ab57 cds_s_nopriv_eb

Severity: Fatal **Component:** cds/cds_svc_general

Text: You must have system privileges to start this server.

Explanation: The user is not 'root'

Action: Re-login as user 'root'.

0x10d0a96c CDS_SOCKET

Severity: Varies **Component:** cds

Text: Error with socket

Explanation: The communications between the DCE library and the cds clerk child has failed. The connection is closed.

Action: If the problem persists, restart DCE.

0x10d0ab9e cds_s_parse_name

Severity: Error **Component:** cds/cds_svc_general

Text: sec_id_parse_name returned status %ld to general : %s

Explanation: A call to sec_rgy_site_bind has failed.

Action: Refer to explanation for returned status from sec_id_parse_name

0x10d0aaaf cds_s_pseudo_load

Severity: Fatal **Component:** cds/cds_svc_server

Text: Error loading clearinghouse from disk. Cannot create directory store. Status = %ld

Explanation: Cannot create directory store

Action: Check for database corruption.

0x10d0ab7d cds_s_pthreadattrcreate

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_attr_create** failed : status = %ld.

Explanation: A call to the function **pthread_attr_create** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab7f cds_s_pthreadattrsetstacksize

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_attr_setstacksize** failed : status %ld.

Explanation: A call to the function **pthread_attr_setstacksize** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab89 cds_s_pthreadcondbroadcast

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_cond_broadcast(3)** failed : status = %ld.

Explanation: A call to the system function **pthread_cond_broadcast(3)** has failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab8a cds_s_pthreadcondbroadcast_a

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_cond_broadcast(3)** failed : status = %ld.

Explanation: A call to the system function **pthread_cond_broadcast(3)** has failed. Program will abort.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab8b cds_s_pthreadconddestroy

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_cond_destroy** failed : status = %ld.

Explanation: A call to the function **pthread_cond_destroy** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab8c cds_s_pthreadconddestroy_a

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_cond_destroy** failed : status = %ld.

Explanation: A call to the function **pthread_cond_destroy** failed. Program will abort.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab91 cds_s_pthreadcondinit

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_cond_init** failed : status = %ld.

Explanation: A call to the function **pthread_cond_init** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab92 cds_s_pthreadcondinit_a

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_cond_init** failed : status = %ld.

Explanation: A call to the function **pthread_cond_init** failed. The program will abort.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab93 cds_s_pthreadcondsignal

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_cond_signal** failed : status = %ld.

Explanation: A call to the system function **pthread_cond_signal** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab94 cds_s_pthreadcondsignal_a

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_cond_signal** failed : status = %ld.

Explanation: A call to the system function **pthread_cond_signal** failed. The program will abort.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab8d cds_s_pthreadcondtimedwait

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_cond_timedwait** failed : status = %ld.

Explanation: A call to the function **pthread_cond_timedwait** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab8e cds_s_pthreadcondtimedwait_a

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_cond_timedwait** failed : status = %ld.

Explanation: A call to the function **pthread_cond_timedwait** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab8f cds_s_pthreadcondwait

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_cond_wait** failed : status = %ld.

Explanation: A call to the system function **pthread_cond_wait** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab90 cds_s_pthreadcondwait_a

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_cond_wait** failed : status = %ld.

Explanation: A call to the system function **pthread_cond_wait** failed. The program will abort.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab7a cds_s_pthreadcreate

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_create** failed : status = %ld.

Explanation: A call to the function **pthread_create** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab7b cds_s_pthreadcreate_a

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_create** failed : status = %ld.

Explanation: A call to the function **pthread_create** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab95 cds_s_pthreaddelay_a

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_delay_np** failed : status = %ld.

Explanation: A call to the system function **pthread_delay_np** failed. The program will abort.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab7c cds_s_pthreadkeycreate

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_keycreate** failed : status = %ld.

Explanation: A call to the function **pthread_keycreate** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab86 cds_s_pthreadmutexdestroy

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_mutex_destroy** failed : status = %ld.

Explanation: A call to the function **pthread_mutex_destroy** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab87 cds_s_pthreadmutexdestroy_a

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_mutex_destroy** failed : status = %ld.

Explanation: A call to the function **pthread_mutex_destroy** failed. Program will abort.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab80 cds_s_pthreadmutexinit

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_mutex_init** failed : status = %ld.

Explanation: A call to the system function **pthread_mutex_init** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab81 cds_s_pthreadmutexinit_a

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_mutex_init** failed : status = %ld.

Explanation: A call to the system function **pthread_mutex_init** failed. Program will abort.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab82 cds_s_pthreadmutexlock

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_mutex_lock** failed : status = %ld.

Explanation: A call to the system function **pthread_mutex_lock** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab83 cds_s_pthreadmutexlock_a

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_mutex_lock** failed : status = %ld.

Explanation: A call to the system function **pthread_mutex_lock** failed. The program will abort.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab88 cds_s_pthreadmutextrylock

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_mutex_trylock(3)** failed : status = %ld.

Explanation: A call to the system function **pthread_mutex_trylock(3)** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab84 cds_s_pthreadmutexunlock

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_mutex_unlock** failed : status = %ld.

Explanation: A call to the function **pthread_mutex_unlock** failed.

Action: See the indicated status code for additional detail. The status code are documented in this manual.

0x10d0ab85 cds_s_pthreadmutexunlock_a

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_mutex_unlock** failed : status = %ld.

Explanation: A call to the function **pthread_mutex_unlock** failed. The program will abort.

Action: See the indicated status code for additional detail. The status code are documented in this manual.

0x10d0ab7e cds_s_pthreadsetspecific

Severity: Fatal **Component:** cds/cds_svc_general

Text: Routine **pthread_setspecific** failed : status = %ld.

Explanation: A call to the system function **pthread_setspecific** has failed.

Action: See the indicated status code for additional detail. The status code are documented in this manual.

0x10d0aa84 cds_s_replay_badlog

Severity: Warning **Component:** cds/cds_svc_server

Text: Transaction log replay detected an unrecognized buffer state: %d

Explanation: The transaction log replay state machine detected an unknown state. Transaction log replay was terminated.

Action: Report this to your DCE supplier. The clearinghouse may have lost information modified since the last database checkpoint.

0x10d0aa87 cds_s_replay_dirinternal_a

Severity: Fatal **Component:** cds/cds_svc_server

Text: Playback error: directory/replica %s was not created due to an internal error: %s

Explanation: An internal database error was detected when attempting to create a directory or replica entry during transaction log replay.

Action: Contact your DCE supplier. You may be able to continue operations by manually recreating the entry.

0x10d0aa86 cds_s_replay_dirmem_a

Severity: Fatal **Component:** cds/cds_svc_server

Text: Playback error: directory/replica %s was not created due to insufficient memory

Explanation: Insufficient virtual memory was available for the transaction log replay mechanism to create a directory.

Action: Increase the amount of virtual memory available to the server and restart it at the earliest opportunity.

0x10d0aa89 cds_s_replay_objinternal_a

Severity: Fatal **Component:** cds/cds_svc_server

Text: Playback error: object %s was not created due to an internal error: %s

Explanation: An internal database error was detected when attempting to create an object entry during transaction log replay.

Action: Contact your DCE supplier. You may be able to continue operations by manually recreating the entry.

0x10d0aa88 cds_s_replay_objmem_a

Severity: Fatal **Component:** cds/cds_svc_server

Text: Playback error: object %s was not created due to insufficient memory.

Explanation: Insufficient virtual memory was available for the transaction log replay mechanism to create an object entry.

Action: Increase the amount of virtual memory available to the server and restart it at the earliest opportunity. The object will need to be manually recreated.

0x10d0aa85 cds_s_replay_stats

Severity: Notice **Component:** cds/cds_svc_server

Text: Transaction log statistics for clearinghouse %s. Creates: %d Directories, %d Objects, %d Do_Updates. Updates: %d Directories, %d Objects %d Clearinghouse.

Explanation: The statistics of the transaction log replay.

Action: None required.

0x10d0ab71 cds_s_rpcbindingexport

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **rpc_ns_binding_export(3rpc)** failed: status = %ld.

Explanation: A call to the system function **rpc_ns_binding_export(3rpc)** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab6d cds_s_rpcbindingfromstring

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **rpc_binding_from_string_binding(3rpc)** failed : status = %ld.

Explanation: A call to the function **rpc_binding_from_string_binding(3rpc)** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab6f cds_s_rpcbindinginqauth

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **rpc_binding_inq_auth_client(3rpc)** failed : status = %ld.

Explanation: A call to the system function **rpc_binding_inq_auth_client(3rpc)** has failed.

Action: See the indicated status message for additional detail. The status messages are documented in this manual.

0x10d0ab60 cds_s_rpcbindingreset

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **rpc_binding_reset(3rpc)** failed : status = %ld.

Explanation: A call to the function **rpc_binding_reset(3rpc)** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab72 cds_s_rpcbindingunexport

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **rpc_ns_binding_unexport(3rpc)** failed: status = %ld.

Explanation: A call to the system function **rpc_ns_binding_unexport(3rpc)** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab65 cds_s_rpcinqbindings

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **rpc_server_inq_bindings(3rpc)** failed : status = %ld.

Explanation: A call to the function **rpc_server_inq_bindings(3rpc)** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab68 cds_s_rpcregisterauthinfo

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **rpc_server_register_auth_info(3rpc)** failed : status = %ld.

Explanation: A call to the function <rpc_server_register_auth_info(3rpc)> failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab61 cds_s_rpcregisterep

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **rpc_ep_register(3rpc)** failed: status = %ld.

Explanation: A call to the function **rpc_ep_register(3rpc)** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab63 cds_s_rpcregisterif

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **rpc_server_register_if(3rpc)** failed : status = %ld.

Explanation: A call to the function **rpc_server_register_if(3rpc)** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab67 cds_s_rpcresolvebinding

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **rpc_ep_resolve_binding(3rpc)** failed : status = %ld.

Explanation: A call to the function **rpc_ep_resolve_binding(3rpc)** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab5f cds_s_rpcserverlisten

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **lrpc_server_listen(3rpc)** failed : status = %ld.

Explanation: A call to the function **rpc_server_listen(3rpc)** has failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab70 cds_s_rpcsetauthinfo

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **rpc_binding_set_auth_info(3rpc)** failed : status = %ld.

Explanation: A call to the function **rpc_binding_set_auth_info(3rpc)** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab66 cds_s_rpcsetobject

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **rpc_binding_set_object(3rpc)** failed: status = %ld.

Explanation: A call to the function **rpc_binding_set_object(3rpc)** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab6e cds_s_rpcseverinit

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **rpc_server_init()** failed : status = %ld.

Explanation: An attempt to initialise contact with the server failed.

Action: Correct the situation as indicated in the error status.

0x10d0ab6a cds_s_rpcstringbindingcompose

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **rpc_string_binding_compose(3rpc)** failed : status = %ld.

Explanation: A call to the function **rpc_string_binding_compose(3rpc)** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab69 cds_s_rpcstringtobinding

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **rpc_binding_to_string_binding(3rpc)** failed : status = %ld.

Explanation: A call to the function **rpc_binding_to_string_binding(3rpc)** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab5e cds_s_rpctowerfrombinding

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **rpc_tower_vector_from_binding(3rpc)** failed : status = %ld.

Explanation: A call to `rpc_tower_vector_from_binding(3rpc)` returned the specified error.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab6c cds_s_rpctowertobinding

Severity: Error **Component:** cds/cds_svc_general

Text: Routine `rpc_tower_to_binding(3rpc)` failed : status = %ld.

Explanation: A call to the function `rpc_tower_to_binding(3rpc)` failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab6b cds_s_rpctowervectorfrombind

Severity: Error **Component:** cds/cds_svc_general

Text: Routine `rpc_tower_vector_from_binding(3rpc)` failed : status = %ld.

Explanation: A call to the function `rpc_tower_vector_from_binding(3rpc)` failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab62 cds_s_rpcunregisterep

Severity: Error **Component:** cds/cds_svc_general

Text: Routine `rpc_ep_unregister(3rpc)` failed: status = %ld.

Explanation: A call to the function `rpc_ep_unregister(3rpc)` failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab64 cds_s_rpcuseallprotseqs

Severity: Notice **Component:** cds/cds_svc_general

Text: Routine `rpc_server_use_all_protseqs(3rpc)` failed: status = %ld.

Explanation: A call to the function `rpc_server_use_all_protseqs(3rpc)` failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab76 cds_s_secidparsename

Severity: Error **Component:** cds/cds_svc_general

Text: Routine `sec_id_parse_name(3sec)` failed : status = %ld.

Explanation: A call to the function `sec_id_parse_name(3sec)` has failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab79 cds_s_secimportctx

Severity: Error **Component:** cds/cds_svc_general

Text: Routine `sec_login_import_context(3sec)` failed : status = %ld.

Explanation: A call to the function `sec_login_import_context(3sec)` has failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab73 cds_s_secrgycellbind

Severity: Error **Component:** cds/cds_svc_general

Text: Routine `sec_rgy_cell_bind(3sec)` failed on %s: status = %ld.

Explanation: A call to the function `sec_rgy_cell_bind(3sec)` has failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab77 cds_s_secrgypgoismember

Severity: Error **Component:** cds/cds_svc_general

Text: Routine `sec_rgy_pgo_is_member(3sec)` failed : status = %ld.

Explanation: A call to the function `sec_rgy_pgo_is_member(3sec)` has failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab78 cds_s_secrgypgonametoid

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **sec_rgy_pgo_name_to_id(3sec)** failed : status = %ld.

Explanation: A call to the function **sec_rgy_pgo_name_to_id(3sec)** has failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab74 cds_s_secrgysitebind

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **sec_rgy_site_bind(3sec)** failed on %s: status = %ld.

Explanation: A call to the function **sec_rgy_site_bind(3sec)** has failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0ab75 cds_s_secrgysiteopen

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **sec_rgy_site_open(3sec)** failed: status = %ld.

Explanation: A call to the function **sec_rgy_site_open(3sec)** has failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0aa83 cds_s_server_aliasbackoutchild

Severity: Error **Component:** cds/cds_svc_server

Text: **add_cell_alias:** Previous error occurred, failed to back out and delete the child pointer in the parent directory: status = %ld.

Explanation: A previous error occurred during adding a cellname as child. In backing out this command, the server failed in cleaning up the child pointer created in the parent directory.

Action: Verify that you have the proper access to the parent directory for this command. Also check that the parent directory is properly being served. You may have to delete the child pointer by hand.

0x10d0aa7c cds_s_server_aliasbadptr

Severity: Error **Component:** cds/cds_svc_server

Text: Invalid DBSetMember_t pointers for timestamp check.

Explanation: This is a name server bug detected while modifying the cell alias list.

Action: Report this problem to your DCE supplier.

0x10d0aa80 cds_s_server_aliaschild

Severity: Error **Component:** cds/cds_svc_server

Text: add_cell_alias: Could not create child pointer in parent directory: status = %ld.

Explanation: When adding a cellname as child, a child pointer is created in the parent directory.

Action: Verify that you have the proper access to the parent directory for this command. Also check that the parent directory is properly being served.

0x10d0aa82 cds_s_server_aliascreatesl

Severity: Error **Component:** cds/cds_svc_server

Text: add_cell_alias: Could not create soft link in place of previous child pointer in parent directory: status = %ld

Explanation: When adding a cellname as child, the child pointer in the previous parent directory is deleted and replaced with a soft link.

Action: Verify that you have the proper access to the parent directory for this command. Also check that the parent directory is properly being served. You may have to create the soft link by hand.

0x10d0aa81 cds_s_server_aliasdelchild

Severity: Error **Component:** cds/cds_svc_server

Text: add_cell_alias: Could not delete old child pointer in parent directory: status = %ld.

Explanation: When adding a cellname as child, the child pointer in the previous parent directory is deleted and replaced with a soft link.

Action: Verify that you have the proper access to the parent directory for this command. Also check that the parent directory is properly being served. You may have to delete the previous child pointer by hand.

0x10d0aa7d cds_s_server_aliasmultiprfd

Severity: Error **Component:** cds/cds_svc_server

Text: More than one primary alias detected.

Explanation: While examining the cell alias list, more than one primary alias was detected.

Action: Report this problem to your DCE supplier.

0x10d0aa7e cds_s_server_aliasnoprfd

Severity: Error **Component:** cds/cds_svc_server

Text: get_preferred_member: No cell alias detected.

Explanation: No cell aliases were detected.

Action: If this error is not recurring it can be ignored.

0x10d0aa7b cds_s_server_aliasnotmaster

Severity: Error **Component:** cds/cds_svc_server

Text: modify_cell_alias: Not master replica.

Explanation: Modification of cell aliases been erroneously directed to a read-only replica of the cell root directory.

Action: Report this problem to your DCE supplier.

0x10d0aa7a cds_s_server_aliasnotroot

Severity: Error **Component:** cds/cds_svc_server

Text: modify_cell_alias: Not root directory.

Explanation: The modify cell alias routine could not locate the cell root directory.

Action: Report this problem to your DCE supplier.

0x10d0aa7f cds_s_server_aliasoverflow

Severity: Error **Component:** cds/cds_svc_server
Text: modify_cell_alias: Buffer overflow, alias not modified
Explanation: This is a name server bug.
Action: Report this problem to your DCE supplier.

0x10d0aa58 cds_s_server_attributemissing

Severity: Notice **Component:** cds/cds_svc_server
Text: Attribute %s missing for %s.
Explanation: Expected attribute was not found.
Action: Report this problem to your DCE supplier.

0x10d0aa52 cds_s_server_autofail

Severity: Error **Component:** cds/cds_svc_server
Text: Cannot auto-initialize CDS server.
Explanation: The server failed to automatically initialize itself.
Action: See the servicability log for more information on the error.

0x10d0aa4e cds_s_server_badauthn

Severity: Error **Component:** cds/cds_svc_server
Text: Invalid authentication service detected %d.
Explanation: A request has been rejected due to lack of DCE authentication credentials. An unsupported authentication service was requested.
Action: None required.

0x10d0aa4f cds_s_server_badauthz

Severity: Error **Component:** cds/cds_svc_server
Text: Invalid authorization service: status code = %d
Explanation: An invalid authorization service has been detected.
Action: Report this problem to your DCE supplier.

0x10d0aa5a cds_s_server_childupdateevent

Severity: Notice **Component:** cds/cds_svc_server

Text: Cannot update child pointer for directory %s: status = %ld.

Explanation: Server event 'Cannot-Update-Child-Pointer' has occurred.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0aa40 cds_s_server_chstate

Severity: Fatal **Component:** cds/cds_svc_server

Text: Clearinghouse :%s - database state assertion failure: observed state code was %d

Explanation: During a database checkpoint an unknown state was detected. The checkpoint was not performed.

Action: Restart the server as soon as possible. If this error persists, contact your DCE supplier.

0x10d0aa5f cds_s_server_clearinghousecreated

Severity: Notice **Component:** cds/cds_svc_server

Text: Clearinghouse %s created.

Explanation: A new clearinghouse has been created. Informational message.

Action: None required.

0x10d0aa5e cds_s_server_clearinghousedeleted

Severity: Notice **Component:** cds/cds_svc_server

Text: Clearinghouse %s deleted

Explanation: Clearinghouse has been deleted. Informational message.

Action: None required.

0x10d0aa47 cds_s_server_clecrects

Severity: Error **Component:** cds/cds_svc_server

Text: Create clearinghouse failed since unable to create clearinghouse object : status = %ld.

Explanation: A test of the creation timestamp of the new clearinghouse object did not match what CDS reports as the timestamp. The timestamps must match to prevent clearinghouse name collisions.

Action: A non-standard configuration of the cell root directory's replica set can cause this problem. Assure that all replicas of the cell root directory are accounted for and are in the current replica set.

0x10d0aa48 cds_s_server_clecrefailed

Severity: Error **Component:** cds/cds_svc_server

Text: Create clearinghouse failed with error = %ld

Explanation: Unable to create the clearinghouse due to an unexpected error.

Action: Use the additional error status to probe possible reasons for the error.

0x10d0aa3a cds_s_server_close

Severity: Error **Component:** cds/cds_svc_server

Text: Unable to close file %s: status = %ld.

Explanation: A call to the system function **close(2)** has failed.

Action: See the **close(2)** manual page for further details.

0x10d0aa36 cds_s_server_create

Severity: Error **Component:** cds/cds_svc_server

Text: Unable to create file %s: status = %ld.

Explanation: A call to the system function **open(2)** has failed.

Action: See the **open(2)** manual page for further details.

0x10d0aa43 cds_s_server_creclenomem

Severity: Error **Component:** cds/cds_svc_server

Text: Create clearinghouse failed due to a virtual memory allocation error

Explanation: While responding to a cdscp command to create a clearinghouse the server has been unable to allocate the memory for it.

Action: Increase the virtual memory available to the server and restart the server before re-issuing the command.

0x10d0aa45 cds_s_server_crecleobj

Severity: Error **Component:** cds/cds_svc_server

Text: Create clearinghouse failed. Unable to create object: status = %ld.

Explanation: An error was detected while attempting to create the clearinghouse object.

Action: Either choose a different clearinghouse name or delete the existing object with the same name.

0x10d0aa46 cds_s_server_crecleskulk

Severity: Error **Component:** cds/cds_svc_server

Text: Create clearinghouse failed. Skulk failed on root directory: status = %ld.

Explanation: Error occurred due while trying to skulk the root directory.

Action: Determine the cause of skulk failure, fix it, and attempt to create the clearinghouse again.

0x10d0aa5d cds_s_server_crucialevent

Severity: Notice **Component:** cds/cds_svc_server

Text: Cannot remove the root directory from clearinghouse %s.

Explanation: An attempt was made to remove the root directory from a clearinghouse. The directory will be turned back on.

Action: None required.

0x10d0aa4d cds_s_server_cvtsimple

Severity: Error **Component:** cds/cds_svc_server

Text: Unable to convert the clearinghouse name to internal format: status = %ld.

Explanation: A call to a cds function failed during the automatic server initialization sequence which was creating a new clearinghouse.

Action: Check that the hostname of this server conforms to CDS naming conventions. Attempt to restart the server. Report this problem to your DCE supplier if it persists.

0x10d0aa2e cds_s_server_dacl_eb

Severity: Fatal **Component:** cds/cds_svc_server

Text: Failed to initialise server management DACL

Explanation: Due to a problem occurring during the initialization of the server management DACL and its mutex, the server will exit.

Action: Report this problem to your DCE supplier.

0x10d0aa3f cds_s_server_dbindex

Severity: Error **Component:** cds/cds_svc_server

Text: Database index maintenance routines have detected a corruption.

Explanation: The database has detected an improperly linked index entry. The database will attempt to repair it automatically.

Action: None required.

0x10d0aa50 cds_s_server_dbkeytype_a

Severity: Fatal **Component:** cds/cds_svc_server

Text: Invalid database keytype at line %d file %s.

Explanation: An invalid keytype was found in the database. The server will abort and dump a core file.

Action: Report this problem to your DCE supplier.

0x10d0aa51 cds_s_server_dbnodetype_a

Severity: Fatal **Component:** cds/cds_svc_server

Text: Invalid database node type at line %d file %s.

Explanation: An invalid node type was found in the database. The server will abort and dump a core file.

Action: Report this problem to your DCE supplier.

0x10d0afe2 cds_s_server_delete_entries

Severity: Error **Component:** cds/cds_svc_server

Text: Unable to open in-memory database. Status = %ld.

Explanation: Server is unable to open a temporary in-memory database for the directory store

Action: Check protection of tmp directory on disk.

0x10d0aa3d cds_s_server_diag

Severity: Error **Component:** cds/cds_svc_server

Text: Unable to properly initialize the diagnostic interface

Explanation: An error was detected during diagnostic interface initialization.

Action: Assure that no other cds servers (cdsd processes) are running. If they are, kill them and then restart the server.

0x10d0aa2a cds_s_server_eb

Severity: Fatal **Component:** cds/cds_svc_server

Text: The server is exiting due to an unexpected event.

Explanation: Received an error return and cannot recover.

Action: Check the servicability log for further error messages.

0x10d0aa29 cds_s_server_eg

Severity: Notice **Component:** cds/cds_svc_server

Text: Normal successful exit

Explanation: The cds server (cdsd) has successfully completed and will exit normally.

Action: None required.

0x10d0aa53 cds_s_server_enablefail

Severity: Error **Component:** cds/cds_svc_server

Text: Cannot auto-enable CDS server.

Explanation: The server failed to enable the clearinghouse and communications support.

Action: See the servicability log for more information on the error.

0x10d0aa30 cds_s_server_exportfail_eb

Severity: Fatal **Component:** cds/cds_svc_server

Text: Cannot export bindings to clearinghouse.

Explanation: Error occurred trying the export. The server will exit because with this situation, `acl_edit(1sec)` & `dce_config` will both fail.

Action: Restart the advertiser and server.

0x10d0aa42 cds_s_server_fixchdir

Severity: Error **Component:** cds/cds_svc_server

Text: Unable to repair CHDirectory entry for directory uid %s: error=%s

Explanation: The database has detected a difference between the internal directory list and the `CDS_CHDirectories` attribute for the clearinghouse. An attempt to reconcile the difference has failed. The `CDS_CHDirectories` attribute is not accurate.

Action: While this does not affect normal server operations, consider restarting the server at the earliest opportunity. If this error persists, contact your DCE supplier.

0x10d0aa4c cds_s_server_gethostname

Severity: Error **Component:** cds/cds_svc_server

Text: Routine `gethostname(2)` failed: status = %s

Explanation: A call to the system function `gethostname(2)` failed during the automatic server initialization sequence.

Action: See the `gethostname(2)` manual page for further details. Correct the problem and restart the server.

0x10d0aa33 cds_s_server_initcomplete

Severity: Notice **Component:** cds/cds_svc_server

Text: Server initialization completed

Explanation: The server's automatic startup sequence has successfully completed.

Action: None required.

0x10d0aa2c cds_s_server_loadfail_eb

Severity: Fatal **Component:** cds/cds_svc_server

Text: Error trying to load a clearinghouse from disk into memory: status = %ld.

Explanation: An attempt to load a clearinghouse into memory failed.

Action: See prior messages for additional detail regarding the failure. Correct the problem and restart the server.

0x10d0aa39 cds_s_server_lseek

Severity: Error **Component:** cds/cds_svc_server

Text: Unable to access file %s: status = %ld.

Explanation: A call to the system function **lseek(2)** has failed.

Action: See the **lseek(2)** manual page for further details.

0x10d0aa4b cds_s_server_namebad_a

Severity: Error **Component:** cds/cds_svc_server

Text: Invalid attribute name flag.

Explanation: An uncorrectable data corruption was detected by the database set management facility. The server will abort and create a core file for analysis.

Action: Restart the server and report the problem to your DCE supplier.

0x10d0aa2f cds_s_server_newread_eb

Severity: Fatal **Component:** cds/cds_svc_server

Text: New namespace cannot be reached: status = %s.

Explanation: The clerk is not responding to lookups in the new namespace. The advertiser may not have received the update.

Action: Restart the advertiser and server.

0x10d0aa5b cds_s_server_noupgradeevent

Severity: Notice **Component:** cds/cds_svc_server

Text: Unable to upgrade directory %s: status = %ld.

Explanation: Server event 'upgrade-Not-Possible' has occurred

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0aa37 cds_s_server_open

Severity: Error **Component:** cds/cds_svc_server

Text: Unable to open file %s: status = %ld.

Explanation: A call to the system function **open(2)** has failed.

Action: See the **open(2)** manual page for further details.

0x10d0aa56 cds_s_server_pathbrokenevent

Severity: Notice **Component:** cds/cds_svc_server

Text: A lookup on parent directory %s failed.

Explanation: Server event 'Broken-Lookup-Paths' has occurred. A lookup on the directory name returned unknownentry.

Action: Make sure the server has read permissions on the directory. If the name has changed, add a softlink pointing to the new directory name.

0x10d0aa59 cds_s_server_possiblecycleevent

Severity: Notice **Component:** cds/cds_svc_server

Text: A loop of softlinks exists for %s.

Explanation: Server event 'Possible-Cycle' has occurred.

Action: Change the softlink target so a loop does not exist.

0x10d0aa35 cds_s_server_read

Severity: Error **Component:** cds/cds_svc_server

Text: Unable to read file %s: status = %ld.

Explanation: A call to the system function **read(2)** has failed.

Action: See the **read(2)** manual page for further details.

0x10d0aa41 cds_s_server_readchaddr

Severity: Warning **Component:** cds/cds_svc_server

Text: Could not read internal clearinghouse address: status = %ld.

Explanation: An unexpected error was detected while attempting to determine if the clearinghouse address has changed.

Action: If the address of the clearinghouse has changed recently, restart the server at the earliest opportunity. If this error persists, contact your DCE supplier.

0x10d0aa49 cds_s_server_rebuildindex_a

Severity: Fatal **Component:** cds/cds_svc_server

Text: Database index rebuild has failed: status = %s

Explanation: An attempt to rebuild a database index has failed. The server will dump core.

Action: Restart the server.

0x10d0aa55 cds_s_server_rootlostevent

Severity: Notice **Component:** cds/cds_svc_server

Text: A copy of the root directory not found in clearinghouse %s.

Explanation: Server event 'Root-Lost' has occurred. Root directory not replicated in this clearinghouse.

Action: Add a copy of the root to the clearinhouse.

0x10d0aa32 cds_s_server_rpc_eb

Severity: Fatal **Component:** cds/cds_svc_server

Text: Initialization of RPC interface has failed.

Explanation: The server will exit because this initialization has failed.

Action: Make sure the endpoint mapper is running. Refer to the servicability log for more status information.

0x10d0aa2d cds_s_server_sec_eb

Severity: Fatal **Component:** cds/cds_svc_server

Text: Failed to initialize server interfaces.

Explanation: Unable to initialize the security interfaces. The server will exit.

Action: Refer to the servicability log for more status information.

0x10d0aa57 cds_s_server_securityevent

Severity: Notice **Component:** cds/cds_svc_server

Text: Server unable to access %s.

Explanation: Server event 'Security-Failure' has occurred. The server cannot access a name.

Action: Change the permissions on the entry.

0x10d0aa4a cds_s_server_setbad_a

Severity: Fatal **Component:** cds/cds_svc_server

Text: Invalid set check.

Explanation: An uncorrectable data corruption was detected by the database set management facility. The server will abort and create a core file for analysis.

Action: Restart the server and report the problem to your DCE supplier.

0x10d0aa3c cds_s_server_setrlimit

Severity: Error **Component:** cds/cds_svc_server

Text: The call to the setrlimit(2) routine has failed: error=%s

Explanation: The call to the system function setrlimit(2) has failed.

Action: See the setrlimit(2) manual page for further details.

0x10d0aa54 cds_s_server_skulkfailedevent

Severity: Notice **Component:** cds/cds_svc_server

Text: A skulk failed for directory %s: status = %ld.

Explanation: A skulk operation failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0aa78 cds_s_server_skulkstat1

Severity: Notice **Component:** cds/cds_svc_server

Text: Skulk failed for %s in phase %s: reason = %s, status = %ld.

Explanation: A skulk failed. This message details the reasons for the failure.

Action: Correct the problem and try again.

0x10d0aa79 cds_s_server_skulkstat2

Severity: Notice **Component:** cds/cds_svc_server

Text: Skulk failed for %s in phase %s: status = %ld.

Explanation: A skulk failed. This message details the reasons for the failure.

Action: Correct the problem and try again.

0x10d0aa28 cds_s_server_startup

Severity: Notice **Component:** cds/cds_svc_server

Text: CDS server starting.

Explanation: The CDS server has started.

Action: None required.

0x10d0aa60 cds_s_server_timeback

Severity: Notice **Component:** cds/cds_svc_server

Text: The system clock has gone backwards.

Explanation: Time has gone backwards. The server cannot accept updates from the past.

Action: Fix the system clock.

0x10d0aa3e cds_s_server_timestamp

Severity: Warning **Component:** cds/cds_svc_server

Text: The timestamp on a new update is older than CDS_AllUpTo. Attribute =%s, CDS_AllUpTo = %s, Update Timestamp = %s.

Explanation: An new update with a timestamp older then allupto was received. The skulk operation will fail.

Action: Use the **cdscp set dir to new epoch** command to correct the problem.

0x10d0aa31 cds_s_server_towerfail_eb

Severity: Fatal **Component:** cds/cds_svc_server

Text: Unable to update local address set.

Explanation: The server was unable to construct an address for the local system and update the clearinghouse's location.

Action: Restart the DCE components.

0x10d0aa3b cds_s_server_unlink

Severity: Error **Component:** cds/cds_svc_server

Text: Unable to delete file %s: status = %ld.

Explanation: A call to the system function **unlink(2)** has failed.

Action: See the **unlink(2)** manual page for further details.

0x10d0aa2b cds_s_server_version_eb

Severity: Fatal **Component:** cds/cds_svc_server

Text: Unsupported version number specified on command line: %s.

Explanation: The -v switch was used with a version number the server doesn't recognize.

Action: Use either -v 3.0 or -v 4.0.

0x10d0aa38 cds_s_server_write

Severity: Error **Component:** cds/cds_svc_server

Text: Unable to write to file %s: status = %ld.

Explanation: A call to the system function **write(2)** has failed.

Action: See the **write(2)** manual page for further details.

0x10d0aa5c cds_s_server_wrongstate

Severity: Notice **Component:** cds/cds_svc_server

Text: A replica of directory %s was in the wrong state %d.

Explanation: The state of a replica was not as expected.

Action: Report this problem to your DCE supplier.

0x10d0ab9d cds_s_site_bind

Severity: Error **Component:** cds/cds_svc_general

Text: sec_rgy_site_bind returned status %ld : %s

Explanation: A call to sec_rgy_site_bind has failed.

Action: Refer to explanation for returned status from sec_rgy_site_bind

0x10d0ab5a cds_s_svc_routing_eb

Severity: Error **Component:** cds/cds_svc_general

Text: Unable to set message routing from command line argument : status = %ld.

Explanation: A call to **dce_svc_routing** failed.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0a001 CDS_SUCCESS

Severity: Varies **Component:** cds

Text: Successful completion.

Explanation: The requested operation completed successfully.

Action: None required.

0x10d0a89f CDS_SUCCESS_STALE

Severity: Varies **Component:** cds

Text: Success, may be stale

Explanation: A clearinghouse was inaccessible. Returning potentially stale clerk cache values.

Action: Use value returned, or look for accessible clearinghouse.

0x10d0ab5d cds_s_uuidfromstr

Severity: Error **Component:** cds/cds_svc_general

Text: Routine **uuid_from_string(3rpc)** failed : status = %ld.

Explanation: A call to **uuid_from_string(3rpc)** returned an error.

Action: See the indicated status code for additional detail. The status codes are documented in this manual.

0x10d0a3f1 CDS_TIMEOUTMAYBEDONE

Severity: Varies **Component:** cds

Text: Timeout occurred; operation may have completed

Explanation: A modify operation was not completed by the clerk in the specified time.

Action: Check the results of the operation, and try again if not done.

0x10d0a3f0 CDS_TIMEOUTNOTDONE

Severity: Varies **Component:** cds

Text: Timeout occurred; operation not performed

Explanation: A read operation was not completed by the clerk in the specified time.

Action: Retry the operation.

0x10d0a455 CDS_UNKNOWNATTRIBUTE

Severity: Varies **Component:** cds

Text: Requested attribute does not exist

Explanation: A **ReadAttrValue** was made to an attribute that doesn't exist on the given entity.

Action: None required.

0x10d0a3f8 CDS_UNKNOWNCLEARINGHOUSE

Severity: Varies **Component:** cds

Text: Specified clearinghouse does not exist

Explanation: The clearinghouse you specified in the command does not exist in the namespace.

Action: Make sure you typed the full name of the clearinghouse correctly. Reenter your command and specify the correct name of an existing clearinghouse.

0x10d0a3f4 CDS_UNKNOWNENTRY

Severity: Varies **Component:** cds

Text: Requested entry does not exist

Explanation: The entry does not exist or you do not have any permissions to the entry.

Action: Assuming you have adequate permissions, try to create the name yourself. If the name exists, the creation fails and the following error message is displayed:
Specified full name already exists.

0x10d0a409 CDS_UNTRUSTEDCH

Severity: Varies **Component:** cds

Text: Server process has insufficient access to clearinghouse

Explanation: The server principal on the requesting server has insufficient CDS permissions to a clearinghouse that stores the name the server was trying to access.

Action: Have your namespace administrator (or the manager of the server on which the clearinghouse resides) grant the server principal on the requesting server the permissions it requires to perform the requested operation.

0x10d0a40a CDS_VERSIONSKEW

Severity: Varies **Component:** cds

Text: Replica cannot be added to old Clearinghouse

Explanation: An attempt was made to add a newer directory replica to an older clearinghouse, which cannot support that replica.

Action: Upgrade the old clearinghouse or be content with what you have.

0x10d0a405 CDS_WRONGATTRIBUTETYPE

Severity: Varies **Component:** cds

Text: Specified attribute type is incorrect

Explanation: When modifying an entry, the wrong attribute type was specified.

Action: Check the attribute types and reconcile.

0x10d0a44d CDS_WRONGSTATE

Severity: Varies **Component:** cds

Text: Responding entity in wrong state to process requested operation

Explanation: A responding entity (a CDS clerk, CDS server, clearinghouse, or replica) is not running and cannot process your request.

Action: Restart the CDS clerk or CDS server before you reenter your command.

0x177db041 cma_s_alert_nesting

Severity: Error **Component:** thd/thd_svc_general

Text: Improper nesting of alert scope

Explanation: An error was detected while restoring a previous alert delivery state.

Action: Contact the vendor from whom the application was obtained.

0x177db032 cma_s_badparam

Severity: Error **Component:** thd/thd_svc_general

Text: An Invalid parameter exception has been raise

Explanation: An invalide parameter has for a threads operation has been detected.

Action: The software vendor should check all parameters being passed in through the pthread api.

0x177db033 cma_s_bugcheck

Severity: Error **Component:** thd/thd_svc_general

Text: A fatal internal error has occurred in DCE Threads.

Explanation: An internal inconsistency in the DCE Threads library has been detected. The threads library dumped core by raising a SIGIOT signal. The application calling the threads library is not at fault.

Action: Contact the vendor from whom the application was obtained.

0x177db03f cma_s_defer_q_full

Severity: Error **Component:** thd/thd_svc_general

Text: A no space currently available to process interrupt request exception has been raised

Explanation: The interrupt defer queue is full.

Action: Contact the vendor from whom the application was obtained.

0x177db035 cma_s_existence

Severity: Error **Component:** thd/thd_svc_general

Text: An Object referenced does not currently exist exception has been raised

Explanation: A reference has been made to a threads object that does not exist.

Action: Contact the vendor from whom the application was obtained.

0x177db03e cma_s_inialrpro

Severity: Error **Component:** thd/thd_svc_general

Text: A threads library initialization is already in progress exception has been raised

Explanation: A threads initialization has been attempted while a previous one is still in progress on an implementation for which this is not allowed.

Action: Contact the vendor from whom the application was obtained.

0x177db036 cma_s_in_use

Severity: Error **Component:** thd/thd_svc_general

Text: An object referenced is already in use exception has been raised

Explanation: The application has referenced an object that is already in use and for which multiple usage is not allowed.

Action: Contact the vendor from whom the application was obtained.

0x177db03a cma_s_nostackmem

Severity: Error **Component:** thd/thd_svc_general

Text: A no space to create a stack exception has been raised.

Explanation: Either the memory limit for the principal executing the application has been exceeded or the system has exhausted virtual memory.

Action: Contact your system administrator.

0x177db03b cma_s_notcmastack

Severity: Error **Component:** thd/thd_svc_general

Text: A current stack was not allocated by thread library exception has been raised

Explanation: A threads operation was attempted on a stack that the threads implementation did not allocate. The results of the operation would be unreliable. This may occur for example if pthread_exit were called from the main thread.

Action: Contact the vendor from whom the application was obtained.

0x177db040 cma_s_signal_q_full

Severity: Error **Component:** thd/thd_svc_general

Text: A no space currently available to process condition signal exception has been raised

Explanation: The signal queue is full.

Action: Contact the vendor from whom the application was obtained.

0x177db039 cma_s_stackovf

Severity: Error **Component:** thd/thd_svc_general

Text: An attempted stack overflow exception has been raised

Explanation: An operation that would result in a stack overflow has been detected.

Action: Contact the vendor from whom the application was obtained.

0x177db03d cma_s_unimp

Severity: Error **Component:** thd/thd_svc_general

Text: An unimplemented feature exception has been raised

Explanation: The application has attempted to execute a feature that is not currently implemented in the implementation on which it is running.

Action: Contact the vendor from whom the application was obtained.

0x177db037 cma_s_use_error

Severity: Error **Component:** thd/thd_svc_general

Text: An operation inappropriate for specified object exception has been raised

Explanation: A operation has been attempted on an object that is invalid on that object.

Action: Contact the vendor from whom the application was obtained.

0x177db038 cma_s_wrongmutex

Severity: Error **Component:** thd/thd_svc_general

Text: A wrong mutex specified in condition wait exception has been raised

Explanation: A condition wait has been performed passing the wrong mutex as an input argument.

Action: Contact the vendor from whom the application was obtained.

0x10f6100d csr_s_cannot_copy_intermediate

Severity: **Component:** csr/csr_s_general
Unknown

Text: Cannot copy the intermediate code set name: %s.\n

Explanation: The intermediate code set name could not be copied internally. The **strepy** function call failed.

Action: Report the error to the vendor. Notify them **strepy** has a problem.

0x10f61004 csr_s_cannot_open_input

Severity: **Component:** csr/csr_s_general
Unknown

Text: Can't open '%s' for input, %s.\n

Explanation: The supplied file could not be opened. The file name is probably wrong.

Action: Verify the file exists. Correct the input file name.

0x10f6100b csrc_s_cannot_open_logfile

Severity: Unknown **Component:** csr/csr_s_general

Text: Can't open '%s' for logging, %s.\n

Explanation: The specified log file was unable to be opened, because of an incorrect pathname.

Action: Correct the pathname to the file, and try again.

0x10f6100a csrc_s_cannot_open_output

Severity: Unknown **Component:** csr/csr_s_general

Text: Can't open '%s' for output, %s.\n

Explanation: The specified output file was unable to be opened, because of an incorrect file name.

Action: Correct the output file name, and try again.

0x10f61005 csrc_s_duplicate_field

Severity: Unknown **Component:** csr/csr_s_syntax

Text: Duplicate '%s' field.\n

Explanation: The **csrc** utility detected a duplicated field within the input specification.

Action: Remove the duplicated field, and try again.

0x10f61007 csrc_s_internal_unknown_type

Severity: Unknown **Component:** csr/csr_s_syntax

Text: Internal error storing unknown type %d.\n

Explanation: The **csrc** detected an unknown token. The **lex** utility didn't catch the invalid token. This error should not happen.

Action: Report the error to the vendor. Show them your **csrc** input file.

0x10f61003 csrc_s_lex_error

Severity: **Component:** csrc/csr_s_syntax
Unknown

Text: File = %s: Line = %d: Error = %s (near String = '%s').\n

Explanation: The **csrc** parser portion detected the error.

Action: Fix the syntax error. Check The **csrc** man page for the legal syntax.

0x10f61006 csrc_s_missing_field

Severity: **Component:** csrc/csr_s_syntax
Unknown

Text: Missing '%s' field.\n

Explanation: A required field is missing.

Action: All values and text pairs are required for a code set **field_list**. Add the missing field. Check the **csrc** man page for complete information on each field.

0x10f6100c csrc_s_no_memory

Severity: **Component:** csrc/csr_s_general
Unknown

Text: Cannot allocate the required memory.\n

Explanation: The **csrc** utility could not allocate the required memory internally.

Action: Stop any unnecessary process and try again, or add more memory.

0x10f61009 csrc_s_no_output

Severity: **Component:** csrc/csr_s_syntax
Unknown

Text: Checking of syntax in the input failed. No output generated.\n

Explanation: The **csrc** utility detected an error, and was unable to generate the output.

Action: This error is caused by syntactic errors in the input file. Check the **csrc** man page and fix the problem, then try again.

0x10f6100e csrc_s_too_many_intermediate

Severity: Unknown **Component:** csr/csr_s_general

Text: Intermediate code sets should not exceed %d.\n

Explanation: The **csrc** utility detected that a user specified too many intermediate code sets.

Action: Reduce the number of intermediate code sets to the number displayed, and try again.

0x14601013 db_s_already_locked

Severity: Varies **Component:** lib

Text: Database is already locked

Explanation: An attempt was made to lock a database with **dce_db_lock()**, but it was already locked.

Action: Call **dce_db_unlock()** to unlock the database or do not attempt to lock an already-locked database.

0x14601006 db_s_bad_header_type

Severity: Varies **Component:** lib

Text: Header type is incorrectly specified.

Explanation: An attempt was made to create a database while specifying an incorrect header type.

Action: When creating a database, set the **flags** parameter of **dce_db_open()** to have either **db_c_std_header** or **db_c_acl_header** or neither (meaning no header).

0x14601004 db_s_bad_index_type

Severity: Varies **Component:** lib

Text: Index type is not known or incorrectly specified.

Explanation: An attempt was made to create a database without specifying an index type or to open an existing one with an incorrect type.

Action: When creating a new database, set the *flags* parameter of **dce_db_open()** to have either **dce_db_c_index_by_uuid** or **dce_db_c_index_by_name**. When opening

an existing database, no index type is necessary. If specified, it must match the type used when the database was first created.

0x1460100f db_s_del_failed

Severity: Varies **Component:** lib

Text: Database delete operation failure

Explanation: The underlying database-delete procedure failed for some reason. The global variable **errno** may provide more specific information.

Action: The global variable **errno** may indicate what action to take.

0x1460100e db_s_fetch_failed

Severity: Varies **Component:** lib

Text: Database fetch failure

Explanation: The underlying database-fetch procedure failed for some reason. The global variable **errno** may provide more specific information.

Action: The global variable **errno** may indicate what action to take.

0x14601028 db_s_file_lock_fail

Severity: Varies **Component:** lib

Text: Database file lock or unlock failed

Explanation: Either **dce_db_lock()** or **dce_db_unlock()** detected an error, returned by a file locking function.

Action: The global variable **errno** may indicate what action to take.

0x14601005 db_s_index_type_mismatch

Severity: Varies **Component:** lib

Text: Index type in flags parameter does not match type in database

Explanation: The index type bits in the *flags* parameter to **dce_db_open()** did not match the type stored in the database.

Action: Call **dce_db_open()** with the index type that matches what is in the database.

0x14601017 db_s_iter_not_allowed

Severity: Varies **Component:** lib

Text: Operation is not allowed while iterating

Explanation: A call to either a function that alters a backing store (a store or delete operation) or one that starts another iteration was attempted while iterating. This is not allowed.

Action: Do not call routines that alter the backing store or nest iterations while in an iteration loop.

0x14601008 db_s_key_not_found

Severity: Varies **Component:** lib

Text: Key not found in database

Explanation: The specified key was not found in the database. This means the search failed. It is not necessarily a problem.

Action: No action is required.

0x14601007 db_s_missing_convert

Severity: Varies **Component:** lib

Text: Missing convert function

Explanation: A procedure for encoding and decoding (or 'pickling') the data is required.

Action: Call **dce_db_open()** with a pointer to your encoding and decoding procedure.

0x14601015 db_s_mutex_init_fail

Severity: Varies **Component:** lib

Text: pthread_mutex_init() failed

Explanation: The function **pthread_mutex_init()** failed.

Action: The global variable **errno** may indicate what action to take.

0x14601016 db_s_mutex_lock_fail

Severity: Varies **Component:** lib

Text: Pthread mutex lock or unlock failed

Explanation: Either **dce_db_lock()** or **dce_db_unlock()** detected an error, returned by a pthreads mutex function.

Action: The global variable **errno** may indicate what action to take.

0x14601011 db_s_no_header

Severity: Varies **Component:** lib

Text: Objects/records in this database do not have headers

Explanation: An attempt was made to fetch a header from a database that was created without headers for the objects/records.

Action: Do not call **dce_db_header_fetch()** on this database.

0x14601003 db_s_no_more

Severity: Varies **Component:** lib

Text: No more entries to iterate over

Explanation: The **dce_db_iter_next()** function passed the last entry in the database. This is not an error, but informational, and is the only way to tell when you have passed through the database iteratively.

Action: Call **dce_db_iter_done()** to complete the iteration.

0x14601002 db_s_no_name_specified

Severity: Varies **Component:** lib

Text: Database name missing

Explanation: The database filename was not supplied when trying to open the database with **dce_db_open()**.

Action: Call **dce_db_open()** with a valid database filename.

0x14601014 db_s_not_locked

Severity: Varies **Component:** lib

Text: Database is not locked

Explanation: An attempt was made to unlock a database with **dce_db_unlock()**, but it was not locked.

Action: Do not attempt to unlock a database that is not locked.

0x14601001 db_s_not_open

Severity: Varies **Component:** lib

Text: Database not open

Explanation: The database was not opened before this database call.

Action: Call **dce_db_open()** before this database procedure.

0x14601012 db_s_not_std_header

Severity: Varies **Component:** lib

Text: Database does not use the standard object/record header

Explanation: An attempt was made to call the function **dce_db_header_set()**, but the database does not use the standard header.

Action: Do not call **dce_db_header_set()**. This database was created without the standard header, so it cannot be set.

0x14601009 db_s_open_already_exists

Severity: Varies **Component:** lib

Text: Database creat failure - data file already exists

Explanation: When attempting to open a database with the **db_c_create** flag, the specified database file was found to already exist.

Action: Do not open an existing database with the **db_c_create** flag, or remove the database file if a new (and empty) database is desired.

0x1460100c db_s_open_failed

Severity: Varies **Component:** lib

Text: Database open failure

Explanation: The underlying database-open procedure failed for some reason. The global variable **errno** may provide more specific information.

Action: The global variable **errno** may indicate what action to take.

0x1460100b db_s_open_failed_eaccess

Severity: Varies **Component:** lib

Text: Database open failure - permission denied

Explanation: The server does not have permission to open the database file. The **open** call returned EACCESS.

Action: Run the process as the operating system user that has permission to access the database or change the permission of the database file itself, or the path to it.

0x1460100a db_s_open_failed_enoent

Severity: Varies **Component:** lib

Text: Database open failure - no such file or directory

Explanation: The specified database file or part of its path was not found. The **open** call returned ENOENT.

Action: Correct the pathname to the file you are attempting to open.

0x14601010 db_s_readonly

Severity: Varies **Component:** lib

Text: Database is opened as 'readonly'

Explanation: An attempt was made to modify the database with **dce_db_store()** or **dce_db_delete()** after opening it with **db_c_readonly** in the **flags** parameter.

Action: Either open the database without **db_c_readonly** in the **flags** parameter, or do not try to modify it.

0x14601029 db_s_stat_fail

Severity: Varies **Component:** lib

Text: Database file stat failed

Explanation: The underlying database-stat function failed for some reason. The global variable **errno** may provide more specific information.

Action: The global variable **errno** may indicate what action to take.

0x1460100d db_s_store_failed

Severity: Varies **Component:** lib

Text: Database store failure

Explanation: The underlying database-store procedure failed for some reason. The global variable **errno** may provide more specific information.

Action: The global variable **errno** may indicate what action to take.

0x14601025 dce_attr_s_bad_binding

Severity: Varies **Component:** lib

Text: Bad or invalid dce attr binding handle

Explanation: Bad or invalid dce attr binding handle was supplied.

Action: Reinvoke the operation with the correct dce attr binding handle.

0x14601026 dce_attr_s_bad_cursor

Severity: Varies **Component:** lib

Text: Bad or invalid dce attr cursor

Explanation: Bad or invalid dce attr cursor was supplied.

Action: Reinvoke the operation with the correct dce attr cursor.

0x14601021 dce_attr_s_bad_name

Severity: Varies **Component:** lib

Text: Bad or invalid dce attr name(s)

Explanation: Bad or invalid dce attr name(s) was supplied, for instance wrong name gives to `dce_attr_sch_bind()`

Action: Reinvoke the operation with the correct name(s).

0x14601022 dce_attr_s_bad_schema_name

Severity: Varies **Component:** lib

Text: Bad or invalid dce attr schema object name(s)

Explanation: Bad or invalid schema object name on which to perform this operation, such as the name is not led by 'xattrschema'.

Action: Reinvoke the operation with the correct name(s).

0x14601024 dce_attr_s_no_memory

Severity: Varies **Component:** lib

Text: Cannot allocate memory

Explanation: Memory allocation operation failed

Action: Check memory limits on your machine, and increase available memory, if possible.

0x14601027 dce_attr_s_not_implemented

Severity: Varies **Component:** lib

Text: Not yet implemented operation

Explanation: The corresponding wire protocol operation has not yet been implemented

Action: Reinvoke the operation until the corresponding wire protocol operation is implemented.

0x14601023 dce_attr_s_unknown_auth_info_type

Severity: Varies **Component:** lib

Text: Unknown auth_info type.

Explanation: When dce_attr_xxx_bind being invoked, a unknown auth_info type has been supplied. Please refer to dce_attr_base.h for all defined auth_info types.

Action: Ensure the right auth_info type being supplied when invoking the dce_attr_xxx_bind operation.

0x0000ff03 dce_cf_e_file_open

Severity: Varies **Component:** cfg

Text: File open failed

Explanation: Unable to open configuration file.

Action: Verify that the file exists and has the correct access permission and retry the operation.

0x0000ff01 dce_cf_e_no_match

Severity: Varies **Component:** cfg

Text: No match found

Explanation: No match for the specified host name was found.

Action: Verify the host name and retry the operation.

0x0000ff02 dce_cf_e_no_mem

Severity: Varies **Component:** cfg

Text: Out of memory

Explanation: Unable to allocate sufficient memory to return value.

Action: Increase the swap or paging space or acquire more physical memory. Also check the program for bugs that resulted in bad pointers corrupting the heap allocation area.

0x00000000 dce_cf_st_ok

Severity: Varies **Component:** cfg

Text: Successful completion

Explanation: Requested configuration routine succeeded.

Action: None required.

0x16c9a124 dce_cs_c_cannot_allocate_memory

Severity: Varies **Component:** rpc

Text: Cannot allocate memory for code set info

Explanation: Memory allocation failed within the code set registry access routines.

Action: If the failure is caused by overuse of underlying system resources (for example, address space or swap space), reduce the application's direct use of these resources if possible.

0x16c9a122 dce_cs_c_cannot_open_file

Severity: Varies **Component:** rpc

Text: Cannot open the code set registry file

Explanation: The code set registry file could not be opened. The pathname to the code set registry file may have been specified incorrectly, or the file's permissions may have prevented access.

Action: Check permissions on the code set registry file. If the code set registry is not in the default location, use the **dce_cf_get_csrgy_filename** routine to get the correct path name.

0x16c9a123 dce_cs_c_cannot_read_file

Severity: Varies **Component:** rpc

Text: Cannot read the code set registry file

Explanation: A read error occurred when reading the code set registry.

Action: This is probably a problem in the underlying operating system. Check that the file can be read, or notify your system administrator.

0x16c9a121 dce_cs_c_notfound

Severity: Varies **Component:** rpc

Text: No local code set name exists in the code set registry

Explanation: The code set registry ID value **rgy_code_set_value** passed to an **rpc_rgy_*** or **dce_cs_*** routine did not have a corresponding locale code set name. This implies the code set is not supported in your environment.

Action: Application dependent.

0x16c9a11f dce_cs_c_ok

Severity: Varies **Component:** rpc

Text: Code set registry access succeeded.

Explanation: Code set registry access operation succeeded.

Action: None required.

0x16c9a120 dce_cs_c_unknown

Severity: Varies **Component:** rpc

Text: Value not found in the code set registry

Explanation: The requested value, for example local code set name or registry code set value, was not found in the code set registry.

Action: Application dependent.

0x113db0ce dced_s_already_exists

Severity: Varies **Component:** dhd

Text: Cannot create object; already exists

Explanation: When trying to create a dced object, one with that UUID or name was found to already exist.

Action: Use a different UUID, remove the existing object, or use the existing object.

0x113db325 dced_s_attr_acl_bad_permset

Severity: Error **Component:** dhd/dhd_s_xattrschema

Text: Invalid permission set specified

Explanation: The acl permission set is invalid for this acl manager type.

Action: Make sure the right acl permission set is used for this acl manager type.

0x113db323 dced_s_attr_bad_acl_mgr_set

Severity: Error **Component:** dhd/dhd_s_xattrschema

Text: Invalid acl_mgr_set specified

Explanation: A NULL acl_mgr_set in a scheme_entry to be created has been supplied.

Action: Make sure the acl_mgr_set in a scheme_entry to be created is specified.

0x113db322 dced_s_attr_bad_encoding_type

Severity: Error **Component:** dhd/dhd_s_xattrschema

Text: Invalid encoding type specified

Explanation: The attribute encoding type in a scheme_entry to be created is invalid.

Action: Check the valid encoding types and make sure to specify a correct one.

0x113db326 dced_s_attr_bad_entry_flag

Severity: Error **Component:** dhd/dhd_s_xattrschema

Text: Invalid schema entry flag specified

Explanation: The schema entry flag in a scheme_entry to be created is invalid.

Action: Check the available schema entry flags and use a correct one.

0x113db327 dced_s_attr_bad_intercell_action

Severity: Error **Component:** dhd/dhd_s_xattrschema

Text: Invalid intercell action specified

Explanation: The intercell action in a scheme_entry to be created is invalid.

Action: Check the available intercell actions and use a correct one.

0x113db320 dced_s_attr_bad_name

Severity: Error **Component:** dhd/dhd_s_xattrschema

Text: Invalid attribute name specified

Explanation: A NULL attribute name in a scheme_entry to be created has been supplied.

Action: Make sure the attribute name in a scheme_entry to be created is not NULL.

0x113db321 dced_s_attr_bad_sch_name

Severity: Error **Component:** dhd/dhd_s_xattrschema

Text: Invalid attribute schema name specified

Explanation: A unsupported attribute schema object has been supplied.

Action: Currently dced only supports a single schema object, you can either supply a \"attrschema\" or \"\" as the attr schema object

0x113db32a dced_s_attr_bad_trig_binding

Severity: Error **Component:** dhd/dhd_s_xattrschema

Text: Invalid trigger binding info specified

Explanation: You can not specify NULL, empty, incompleted or wrong binding information.

Action: Check the binding information and make sure it's completed and correct.

0x113db328 dced_s_attr_bad_trig_types

Severity: Error **Component:** dhd/dhd_s_xattrschema

Text: Invalid trigger type specified

Explanation: The trigger type in a scheme_entry to be created is invalid.

Action: Check the available trigger types and use a correct one.

0x113db329 dced_s_attr_bad_uniq_query_accept

Severity: Error **Component:** dhd/dhd_s_xattrschema

Text: Invalid combination of unique_flag=true, query trigger, and intercell_action=accept

Explanation: The combination of unique_flag=true, query trigger, and intercell_action=accept is not allowed.

Action: Don't use this combination.

0x113db324 dced_s_attr_invalid_manager_type

Severity: Error **Component:** dhd/dhd_s_xattrschema

Text: Invalid acl manager type specified

Explanation: The acl manager type in acl_mgr_set of scheme_entry is invalid.

Action: Find out the right acl manager type for dced by daclif i/f. Note that only svrconf object in dced allows new schema entry to be created.

0x113db32b dced_s_attr_not_supported_for_update

Severity: Error **Component:** dhd/dhd_s_xattrschema

Text: The required modification field is not supported

Explanation: You have required to modify schema entry fields which are not supported for update.

Action: Find all schema entry fields which are unsupported fields for update.

0x113db064 dced_s_bad_binding

Severity: Error **Component:** dhd/dhd_s_general

Text: Bad binding handle

Explanation: An incorrect dced binding handle was supplied.

Action: Make sure the binding handle matches the dced service requested.

0x113db190 dced_s_bad_key_data

Severity: Varies **Component:** dhd

Text: Invalid key data has been supplied

Explanation: Either the key type is invalid, or a plain key value was missing.

Action: Make sure the key data is correct.

0x113db0ed dced_s_bad_keydir

Severity: Fatal **Component:** dhd/dhd_s_general

Text: Pre-authentication directory bad

Explanation: The pre-authentication key directory **var/security/preauth** does not exist, is not a directory owned by root in group zero, or does not have mode 0711.

Action: Check the existence and permissions of the directory, correct them, and restart the server.

0x113db073 dced_s_cannot_create_key_mgmt_thr

Severity: Error **Component:** dhd/dhd_s_general

Text: Cannot create key management thread

Explanation: In the function **dce_server_sec_begin()**, the call to **pthread_create()** failed for key management thread.

Action: The global variable **errno** may provide more specific information.

0x113db074 dced_s_cannot_detach_key_mgmt_thr

Severity: Error **Component:** dhd/dhd_s_general

Text: Cannot detach key management thread

Explanation: In the function `dce_server_sec_begin()`, the call to `pthread_detach()` failed for key management thread.

Action: The global variable `errno` may provide more specific information.

0x113db0cb dced_s_cant_open_storage_file

Severity: Varies **Component:** dhd

Text: Failed to open file associated with dced object

Explanation: When attempting to open a file associated with the dced object, a failure occurred.

Action: Ensure that the `storage_tag` field of the `id` parameter refers to an existing file, and that the file is accessible to the dced process.

0x113db0cc dced_s_cant_remove_storage_file

Severity: Varies **Component:** dhd

Text: Failed to remove file belonging to dced object

Explanation: When attempting to remove a file referred to by the dced object, a failure occurred.

Action: Ensure that the `storage_tag` field of the `id` parameter refers to an existing file, and that the file and directory in which it resides is accessible to the dced process.

0x113db452 dced_s_cond_bcast_failed

Severity: Fatal **Component:** dhd/dhd_s_general

Text: Could not broadcast condition variable

Explanation: A resource required for proper concurrency could not be released. The global variable `errno` may provide more specific information.

Action: This is a fatal error. No recovery is possible.

0x113db44d dced_s_cond_init_fail

Severity: Fatal **Component:** dhd/dhd_s_general

Text: Could not initialize condition variable

Explanation: A resource required for proper concurrency could not be created. The global variable **errno** may provide more specific information.

Action: This is a fatal error. No recovery is possible.

0x113db451 dced_s_cond_signal_failed

Severity: Fatal **Component:** dhd/dhd_s_general

Text: Could not signal condition variable

Explanation: A resource required for proper concurrency could not be released. The global variable **errno** may provide more specific information.

Action: This is a fatal error. No recovery is possible.

0x113db450 dced_s_cond_wait_failed

Severity: Fatal **Component:** dhd/dhd_s_general

Text: Could not wait on condition variable

Explanation: A resource required for proper concurrency could not be accessed. The global variable **errno** may provide more specific information.

Action: This is a fatal error. No recovery is possible.

0x113db071 dced_s_data_unavailable

Severity: Error **Component:** dhd/dhd_s_general

Text: Cannot obtain dced server config data

Explanation: The server appears to have been started by **dced**, but the requested data could not be obtained.

Action: Check for error reports from **dced**.

0x113db076 dced_s_empty_replist

Severity: Error **Component:** dhd/dhd_s_general

Text: replist field was NULL or empty

Explanation: The replist field of an object was not found.

Action: Check the data structure and correct the error.

0x113db0ca dced_s_import_already_exists

Severity: Varies **Component:** dhd

Text: File already exists on attempt to create dced object

Explanation: When attempting to create a dced object specifying that the file not be imported, the file was found. A file cannot exist when specifying no import.

Action: Ensure that the **storage_tag** field of the **id** parameter does not refer to an existing file.

0x113db0c9 dced_s_import_cant_access

Severity: Varies **Component:** dhd

Text: Failed to find file on dced import attempt

Explanation: When attempting to create a dced object specifying that the file be imported, the file was not found. An existing file is required for import.

Action: Ensure that the **storage_tag** field of the **id** parameter refers to an existing file and that the file is accessible to the dced process.

0x113db066 dced_s_invalid_arg

Severity: Error **Component:** dhd/dhd_s_general

Text: Bad or wrong arguments

Explanation: Bad or wrong arguments were supplied.

Action: Reinvoke the command with the correct arguments.

0x113db0cd dced_s_invalid_attr_type

Severity: Varies **Component:** dhd

Text: Invalid attribute type was specified

Explanation: When accessing an attribute, an invalid attribute type was specified. For example, the hostdata service only recognizes **dced_g_uuid_fileattr** and **dced_g_uuid_binfileattr**.

Action: Use one of the recognized attribute types.

0x113db192 dced_s_key_v0_not_allowed

Severity: Varies **Component:** dhd

Text: Request for a version zero in this operation not allowed

Explanation: An attempt was made to add a key with version 0 (zero) to a key table. This is not allowed.

Action: Do not add a key with version 0. You may use the change operation with version 0, which will also update the security registry.

0x113db191 dced_s_key_version_mismatch

Severity: Varies **Component:** dhd

Text: Version mismatch between dced key and password record structures

Explanation: In a key add or change operation the specified version in the **dced_key_t** structure and its enclosed **sec_passwd_rec_t** structure do not match.

Action: Be sure the versions in the **dced_key_t** and **sec_passwd_rec_t** structures match.

0x113db44c dced_s_mutex_init_fail

Severity: Fatal **Component:** dhd/dhd_s_general

Text: Could not initialize mutex

Explanation: A resource required for proper concurrency could not be created. The global variable **errno** may provide more specific information.

Action: This is a fatal error. No recovery is possible.

0x113db44e dced_s_mutex_lock_failed

Severity: Fatal **Component:** dhd/dhd_s_general

Text: Could not lock mutex

Explanation: A resource required for proper concurrency could not be locked. The global variable **errno** may provide more specific information.

Action: This is a fatal error. No recovery is possible.

0x113db44f dced_s_mutex_unlock_failed

Severity: Fatal **Component:** dhd/dhd_s_general

Text: Could not unlock mutex

Explanation: A resource required for proper concurrency could not be unlocked. The global variable **errno** may provide more specific information.

Action: This is a fatal error. No recovery is possible.

0x113db072 dced_s_name_missing

Severity: Error **Component:** dhd/dhd_s_general

Text: Name field was NULL or empty

Explanation: The name field of an object (usually passed in as part of a **create** operation) was not specified.

Action: Check the data structure and correct the error.

0x113db06f dced_s_need_one_server_prin

Severity: Error **Component:** dhd/dhd_s_general

Text: Exactly one server principal required

Explanation: Exactly one server principal is required to be in the principal list in the **server_t** structure that is accessed by **dce_server_sec_begin()**. Either zero or more than one were found.

Action: Check the this server's **srvrconf** data to make sure that exactly one server principal is listed.

0x113db194 dced_s_need_privacy

Severity: Varies **Component:** dhd

Text: Permission denied without proper protection level.

Explanation: An attempt was made to perform a remote keytab operation without using **rpc_c_protect_level_pkt_privacy**. This is not allowed.

Action: Either use protection level **rpc_c_protect_level_pkt_privacy** or disable the check with appropriate command line flag to dced.

0x113db065 dced_s_no_memory

Severity: Error **Component:** dhd/dhd_s_general

Text: Cannot allocate memory

Explanation: Memory allocation operation failed

Action: Check memory limits on your machine, and increase available memory, if possible.

0x113db067 dced_s_no_more_entries

Severity: Error **Component:** dhd/dhd_s_general

Text: No more dced entries available

Explanation: All available entries have been exhausted.

Action: No action is required.

0x113db12c dced_s_no_postprocessors

Severity: Varies **Component:** dhd

Text: No postprocessors have been defined

Explanation: The postprocessor item in the hostdata database has not been defined. This condition always occurs the first time **dced** is run on a host or if it is explicitly deleted.

Action: If you do not need postprocessors, no action necessary. If you need them, create the postprocessors object in the hostdata database (with the well-know UUID and name) and create the corresponding file.

0x113db070 dced_s_no_server_keyfile

Severity: Error **Component:** dhd/dhd_s_general

Text: Server keytab file name not found

Explanation: A server keytab file name was not found by **dce_server_sec_begin()**. The keytab file name is passed by **dced** via an environment variable.

Action: Check the this server's **svrconf** data to make sure that a key file is specified.

0x113db069 dced_s_no_support

Severity: Error **Component:** dhd/dhd_s_general

Text: Not a supported request

Explanation: The request is not supported or available.

Action: Use only supported operations for this service.

0x113db068 dced_s_not_found

Severity: Error **Component:** dhd/dhd_s_general

Text: Cannot find a matching object.

Explanation: A matching object could not be found. This may only be informational, depending on whether or not a match was expected.

Action: If a match was required, provide a name or UUID of the matching object, or first create that entry. If not, no action is required.

0x113db06e dced_s_not_started_by_dced

Severity: Error **Component:** dhd/dhd_s_general

Text: Server was not started by dced

Explanation: The server does not appear to have been started by **dced**. **dced** sets several environment variables which are available to servers started by it. One of those variables was not found.

Action: Check the **svrconf** data to make sure that the server can be started and, if so, start it.

0x113db516 dced_s_pkcache_cell_invalid

Severity: Error **Component:** dhd/dhd_s_pkcache

Text: cell name invalid

Explanation: The cell name requested is too long to form a valid krbtgt principal name.

Action: Create shorter cellname alias for target cell.

0x113db518 dced_s_pkcache_key_fresh

Severity: Error **Component:** dhd/dhd_s_pkcache

Text: public key cache is fresh

Explanation: The cache file for the requested cell's krbtgt public key has been updated within the past 5 minutes

Action: Either wait five minutes and request update again, or read cached key value using the sec_pubkey_retrieve_kdc_key interface.

0x113db515 dced_s_pkcache_key_write_failure

Severity: Error **Component:** dhd/dhd_s_pkcache

Text: Cache of KDC key failed.

Explanation: Some error occurred during the attempt to write the public key of the KDC into the file cache.

Action: None.

0x113db517 dced_s_pkcache_mkdir_error

Severity: Error **Component:** dhd/dhd_s_pkcache

Text: directory creation error

Explanation: Unable to create a directory component of the KDC cache file path.

Action: Check permissions on DCELOCAL/etc/security to ensure root can create directories and files there.

0x113db514 dced_s_pkcache_usage_unsupp

Severity: Error **Component:** dhd/dhd_s_pkcache

Text: Public key usage type unsupported.

Explanation: sec_login has requested an invalid usage type for a KDC key. Usage type must be sec_pk_usage_digitalSignature

Action: Make sure libdce and dced are from the same release.

0x113db130 dced_s_postprocessor_bad

Severity: Error **Component:** dhd/dhd_s_hostdata

Text: Postprocessor for *name* exited with status %d

Explanation: The post-processor for the hostdata item with the specified name exited with a non-zero status.

Action: Examine the post-processor and take the appropriate corrective action.

0x113db12d dced_s_postprocessor_file_fail

Severity: Varies **Component:** dhd

Text: Failed to open the hostdata postprocessor list file

Explanation: The hostdata postprocessor list file could not be opened. The global variable **errno** may provide more specific information.

Action: Ensure that the **storage_tag** field of the entry in the hostdata database refers to an existing file and that the file is readable to the dced process.

0x113db12f dced_s_postprocessor_ok

Severity: Notice **Component:** dhd/dhd_s_hostdata

Text: Postprocessor for *name* completed successfully

Explanation: The post-processor for the hostdata item with the specified name completed successfully.

Action: None required

0x113db12e dced_s_postprocessor_spawn_fail

Severity: Varies **Component:** dhd

Text: Could not spawn the postprocessor program

Explanation: The system could not spawn (i.e., fork/exec) the program specified in the postprocessor file for the hostdata object. The global variable **errno** may provide more specific information.

Action: Ensure that the postprocessor points to a valid program, and that there are enough system resource (e.g., swap space) to spawn the program.

0x113db193 dced_s_random_key_not_allowed

Severity: Varies **Component:** dhd

Text: Request for a random key in this operation not allowed

Explanation: An attempt was made to add a random key to a key table. This is not allowed.

Action: Do not add a random key. You may use the change operation with a random key, which will also update the security registry.

0x113db1f5 dced_s_sc_cant_fork

Severity: Varies **Component:** dhd

Text: Cannot fork to start server

Explanation: The fork system call failed.

Action: The global variable **errno** may provide more specific information.

0x113db1f4 dced_s_sc_invalid_attr_type

Severity: Varies **Component:** dhd

Text: Invalid attribute trying to start server

Explanation: While trying to start a server, dced found an invalid attribute, or an attribute that has an invalid type.

Action: Verify that all the attributes in the **srvrconf** object are correct. For example, the environment attribute must be a string array.

0x113db1f7 dced_s_sc_open_file_failed

Severity: Error **Component:** dhd/dhd_s_srvrconf

Text: The fopen() call failed during srvrconf_start, errno = %d

Explanation: The **fopen** system call failed while setting up the encoded server configuration data file for a server.

Action: Verify that dced's private directory exists and that dced has write access to it. The global variable **errno** may provide more specific information.

0x113db1f6 dced_s_sc_setup_failed

Severity: Varies **Component:** dhd

Text: The **func** system call failed

Explanation: The **func** system call failed while setting up the execution environment for a server.

Action: Verify that the server's attributes are correct.

0x113db075 dced_s_server_attr_not_found

Severity: Warning **Component:** dhd/dhd_s_general

Text: Cannot find desired attribute in server_t structure

Explanation: In the function **dce_server_inq_attr()**, the requested attribute was not found in the list of attributes in the **server_t** structure.

Action: Add the attribute to the **srvrconf** object. This is not necessarily an error; it may be information.

0x113db453 dced_s_startup_interrupted

Severity: Varies **Component:** dhd

Text: Initialization was interrupted.

Explanation: The server received a signal or a fatal error happened while in the initialization phase.

Action: Correct the indicated error and restart the server.

0x113db2bc dced_s_sv_already_enabled

Severity: Varies **Component:** dhd

Text: secval service already enabled

Explanation: The secval service was already enabled.

Action: No action necessary. Do not try to enable the secval service unless it is disabled.

0x113db2bd dced_s_sv_not_enabled

Severity: Varies **Component:** dhd

Text: secval service is not enabled

Explanation: The secval service is not enabled.

Action: No action necessary. Do not try to disable the secval service unless it is enabled.

0x113db2c4 dced_s_sv_update_pe_site_fail

Severity: Error **Component:** dhd/dhd_s_secval

Text: secval service failed to update the pe_site status=**code**

Explanation: The secval service failed to update the pe_site file.

Action: Action varies based on results of failure.

0x113db258 dced_s_sx_missing_instance

Severity: Varies **Component:** dhd

Text: NULL or nil UUID for server instance

Explanation: The srvrexec_started call requires an instance uuid.

Action: Fix the server code.

0x113db06a dced_s_unknown_attr_type

Severity: Error **Component:** dhd/dhd_s_general

Text: Unknown dced attribute type

Explanation: The dced attribute type supplied is unknown.

Action: Use only supported dced attribute types.

0x113db06b dced_s_unknown_list_type

Severity: Error **Component:** dhd/dhd_s_general

Text: Unknown dced list type

Explanation: The dced list type supplied is unknown.

Action: Use only supported dced list types.

0x113db06c dced_s_unknown_object_type

Severity: Error **Component:** dhd/dhd_s_general

Text: Unknown dced object type

Explanation: The dced object type supplied is unknown.

Action: Use only supported dced object types.

0x113db06d dced_s_unknown_service

Severity: Error **Component:** dhd/dhd_s_general

Text: Unknown dced service

Explanation: The dced service requested is unknown.

Action: Use only available dced services.

0x1131f376 dcp_s_acl_could_not_bind

Severity: Varies **Component:** dcp

Text: Could not bind to the specified object

Explanation: The specified object does not export an ACL interface or a failure occurred while binding to it.

Action: Enter an object that exports an ACL interface.

0x1131f385 dcp_s_acl_entry_already_exists

Severity: Varies **Component:** dcp

Text: ACL entry exists.

Explanation: The entry specified to be added already exists.

Action: Invoke the **acl show** operation for a list of existing ACL entries. Reenter the command with a new ACL entry or change the existing one.

0x1131f384 dcp_s_acl_entry_not_found

Severity: Varies **Component:** dcp

Text: ACL entry not found.

Explanation: The entry specified to be removed or changed does not exist.

Action: Invoke the **acl show** operation for a list of existing ACL entries. Reenter the command with an existing ACL entry.

0x1131f389 dcp_s_acl_inv_cell_name

Severity: Varies **Component:** dcp

Text: Invalid default cell name.

Explanation: The default cell name specified failed validation.

Action: Reenter the command with a valid cell name.

0x1131f381 dcp_s_acl_inv_entry

Severity: Varies **Component:** dcp

Text: Invalid ACL entry.

Explanation: The ACL entry specified failed validation.

Action: Reenter the command with a valid ACL entry.

0x1131f383 dcp_s_acl_inv_entry_key

Severity: Varies **Component:** dcp

Text: Invalid ACL entry key.

Explanation: The ACL entry key specified failed validation.

Action: Reenter the command with a valid ACL entry key.

0x1131f382 dcp_s_acl_inv_entry_type

Severity: Varies **Component:** dcp

Text: Invalid ACL entry type.

Explanation: The ACL entry type specified failed validation.

Action: Reenter the command with a valid ACL entry type.

0x1131f37c dcp_s_acl_inv_mask_option_value

Severity: Varies **Component:** dcp

Text: Invalid '-mask' option value.

Explanation: A value other than *nocalc* or *calc* was used with **-mask** option.

Action: Reenter the command with a value of *nocalc* or *calc* for the **-mask** option.

0x1131f386 dcp_s_acl_mask_obj_specified

Severity: Varies **Component:** dcp

Text: A 'mask_obj' entry and '-mask' option were both intentionally specified.

Explanation: A mask_obj entry was intentionally specified to be added or changed and **-mask** option was also specified.

Action: Reenter the command with either the **-mask** option or the mask_obj entry.

0x1131f379 dcp_s_acl_mgr_not_found

Severity: Varies **Component:** dcp

Text: ACL manager name specified not found.

Explanation: The command did not contain a valid ACL manager name to use.

Action: Reenter the command with a valid ACL manager name.

0x1131f380 dcp_s_acl_new_mask_obj_failed

Severity: Varies **Component:** dcp

Text: New 'mask_obj' entry failed.

Explanation: The new mask_obj entry was not applied and the ACL was not modified.

Action: More memory is needed for an additional mask_obj ACL entry.

0x1131f37a dcp_s_acl_no_acl_modify_op

Severity: Varies **Component:** dcp

Text: Requires more options.

Explanation: An attempt was made to modify an ACL, but no **-add**, **-cell**, **-change**, **-purge**, or **-remove** options were included.

Action: Reenter the command with additional desired options.

0x1131f387 dcp_s_acl_no_acl_replace_op

Severity: Varies **Component:** dcp

Text: The '-acl' option is required.

Explanation: An attempt was made to replace an entire ACL, but no ACL entries were included with the **-acl** option.

Action: Reenter the command with entries from the **-acl** option.

0x1131f37b dcp_s_acl_no_mask_with_option

Severity: Varies **Component:** dcp

Text: Mask option used without '-add' or '-change' option.

Explanation: An attempt was made to modify an ACL, but the **-mask** option is only valid with the **-add** or **-change** option.

Action: Reenter the command with an ACL entry add and/or change operation.

0x1131f375 dcp_s_acl_no_object

Severity: Varies **Component:** dcp

Text: ACL object not specified.

Explanation: The command did not contain the name of the object to operate on.

Action: Reenter the command with an object.

0x1131f377 dcp_s_acl_not_rpc_entry

Severity: Varies **Component:** dcp

Text: Cannot import from CDS entry, try '-entry' option.

Explanation: The command did not specify the correct ACL to operate on.

Action: Reenter the command with the **-entry** option.

0x1131f37d dcp_s_acl_one_cell_attr

Severity: Varies **Component:** dcp

Text: Too many cell attributes.

Explanation: More than one value was given for **-cell** option.

Action: Reenter the command with only one default cell value.

0x1131f388 dcp_s_acl_replace_dup_entries

Severity: Varies **Component:** dcp

Text: Duplicate ACL entries are not allowed.

Explanation: An attempt was made to replace an entire ACL, but duplicate ACL entries were included with the **-acl** option.

Action: Reenter the command with no duplicate entries on the **-acl** option.

0x1131f37f dcp_s_acl_would_grant_perms

Severity: Varies **Component:** dcp

Text: Unintended permissions not granted.

Explanation: An attempt was made to modify an ACL that would grant some new right without using the **-mask** option.

Action: Reenter the command with **-mask** option.

0x1131f013 dcp_s_ambiguous_arg

Severity: Varies **Component:** dcp

Text: Ambiguous argument '%s':

Explanation: The supplied argument is not unique.

Action: Retype the command with a valid argument.

0x1131f014 dcp_s_attr_not_unique

Severity: Varies **Component:** dcp

Text: The string '%s' is not a unique attribute name.

Explanation: The supplied attribute name is not unique.

Action: Retype the command with a valid argument.

0x1131f3aa dcp_s_aud_cannot_open_trail_file

Severity: Varies **Component:** dcp

Text: Cannot open audit trail file '%s'.

Explanation: The audit api call used to open the audit trail file failed.

Action: Check to see if the specified file exists, and if the file has the correct permissions.

0x1131f3a7 dcp_s_aud_dmn_binding_file_open_fail

Severity: Varies **Component:** dcp

Text: Could not open daemon binding file '%s'.

Explanation: The system call to open the daemon binding file on the local filesystem for reading failed.

Action: Check to see if the specified file exists and has the correct permissions for reading. The audit daemon creates this file upon startup. Check to make sure that the audit daemon is running.

0x1131f3b1 dcp_s_aud_empty_ec_list

Severity: Varies **Component:** dcp

Text: No event classes were found.

Explanation: No event classes were found during the lookup.

Action: Contact a dce administrator and report bug.

0x1131f3b3 dcp_s_audevents_get_events_fail

Severity: Varies **Component:** dcp

Text: Could not get event classes.

Explanation: Could not get the list of event classes from the daemon.

Action: Check to see if the audit daemon is functioning.

0x1131f3bc dcp_s_audfilter_create_need_attr

Severity: Varies **Component:** dcp

Text: The '-attribute' option is required.

Explanation: The user did not specify the required option -attribute.

Action: Retype the command with the -attribute option.

0x1131f3b6 dcp_s_audfilter_extra_key

Severity: Varies **Component:** dcp

Text: The supplied filter type '%s' does not take a key.

Explanation: A filter type that does not take a key was supplied with one.

Action: Retype the command with a valid list of filters and keys.

0x1131f3b9 dcp_s_audfilter_invalid_action

Severity: Varies **Component:** dcp
Text: The audit action '%s' is not valid.
Explanation: The supplied audit action is not valid.
Action: Retype the command with a valid audit action.

0x1131f3b8 dcp_s_audfilter_invalid_condition

Severity: Varies **Component:** dcp
Text: The audit condition '%s' is not valid.
Explanation: The supplied audit condition is not valid.
Action: Retype the command with a valid audit condition.

0x1131f3ba dcp_s_audfilter_invalid_ec

Severity: Varies **Component:** dcp
Text: The event class '%s' is not valid.
Explanation: The supplied event class is not valid.
Action: Retype the command with a valid event class.

0x1131f3b4 dcp_s_audfilter_invalid_type

Severity: Varies **Component:** dcp
Text: The filter type '%s' is not valid.
Explanation: The supplied filter type is not valid.
Action: Retype the command with a valid filter type.

0x1131f3bb dcp_s_audfilter_modify_need_option

Severity: Varies **Component:** dcp
Text: At least one of the options '-add' or '-remove' is required.
Explanation: The user did not specify one of the required options.
Action: Retype the command specifying either -add, -remove or both.

0x1131f3b5 dcp_s_audfilter_need_key

Severity: Varies **Component:** dcp

Text: The specified filter type '%s' requires a key.

Explanation: A filter type requiring a key was supplied without one.

Action: Retype the command with a valid list of filters and keys.

0x1131f3b7 dcp_s_audfilter_no_filter

Severity: Varies **Component:** dcp

Text: No filter found.

Explanation: No filters exist for the supplied filter type and key.

Action: Use a filter type that has filters associated with it.

0x1131f3a8 dcp_s_aud_id_file_open_fail

Severity: Varies **Component:** dcp

Text: Could not open daemon identity file '%s'.

Explanation: The system call to open the daemon identity file on the local filesystem for reading failed.

Action: Check to see if the specified file exists and has the correct permissions for reading. The audit daemon creates this file upon startup. Check to make sure that the audit daemon is running.

0x1131f3a9 dcp_s_aud_id_file_read_fail

Severity: Varies **Component:** dcp

Text: Could not read from daemon identity file '%s'.

Explanation: The system call to read from the daemon identity file on the local filesystem for reading failed.

Action: Check to see if the specified file exists and is not empty. The audit daemon creates this file upon startup. Check to make sure that the audit daemon is running.

0x1131f3ae dcp_s_aud_modify_bad_state

Severity: Varies **Component:** dcp

Text: The value '%s' for the 'state' attribute is not valid.

Explanation: The user entered an invalid value for the state attribute.

Action: Retype the command with valid attribute data.

0x1131f3ac dcp_s_aud_modify_bad_stostrategy

Severity: Varies **Component:** dcp

Text: The value '%s' for the 'stostrategy' attribute is not valid.

Explanation: The user entered an invalid stostrategy value.

Action: Retype the command with valid attribute data.

0x1131f3ad dcp_s_aud_modify_need_opt

Severity: Varies **Component:** dcp

Text: The command requires one of the '-state', '-stostrategy' or '-change' options.

Explanation: The user did not type the command with one of the required options.

Action: Retype the command with one or more of the valid options.

0x1131f3af dcp_s_aud_show_state_invalid

Severity: Varies **Component:** dcp

Text: An invalid state was returned from the server.

Explanation: The server returned an unrecognized value for the **state** attribute.

Action: Contact a dce administrator.

0x1131f3b0 dcp_s_aud_show_stostrategy_invalid

Severity: Varies **Component:** dcp

Text: An invalid storage strategy was returned from the server.

Explanation: The server returned an unrecognized value for the storage strategy attribute.

Action: Contact a dce administrator.

0x1131f3ab dcp_s_aud_trail_file_corrupt

Severity: Varies **Component:** dcp

Text: Audit trail file '%s' is corrupt.

Explanation: The audit api call used to read the audit trail file failed due to some unknown corruption in the trail file itself.

Action: Check to see if the specified file is in the correct format.

0x1131f3b2 dcp_s_audtrail_outfile_open_fail

Severity: Varies **Component:** dcp

Text: Could not open '%s' for output.

Explanation: Could not open the specified output file.

Action: Verify the path specified to the output file is valid, and that you have permission to create a file and write to it in that location.

0x1131f008 dcp_s_bad_arg

Severity: Varies **Component:** dcp

Text: Unrecognized argument '%s'.

Explanation: The command received an unrecognized argument.

Action: Retype the command with correct arguments.

0x1131f00b dcp_s_bad_arg_list

Severity: Varies **Component:** dcp

Text: Command does not accept a list of names as argument.

Explanation: A list was provided to a command that requires a single value.

Action: Retype the command with correct arguments.

0x1131f015 dcp_s_bad_arg_type

Severity: Varies **Component:** dcp

Text: Bad argument type '%d' in '%s'.

Explanation: User error, enter a valid argument type.

Action: Retype the command with a valid argument.

0x1131f016 dcp_s_bad_attribute

Severity: Varies **Component:** dcp

Text: Unknown attribute '%s'.

Explanation: The user entered an unknown attribute in an attribute list.

Action: Retype the command with valid attributes.

0x1131f017 dcp_s_bad_opt

Severity: Varies **Component:** dcp

Text: Unrecognized option '%s'.

Explanation: The command received an unrecognized option.

Action: Retype the command with a valid option.

0x1131f030 dcp_s_bad_signal_format

Severity: Varies **Component:** dcp

Text: Bad signal trap formatting specification '%s', expected one of '%%' or '\045S'.

Explanation: Setting the signal action failed.

Action: Make sure that Tcl is built correctly for your system.

0x1131f00c dcp_s_bad_use_of_local

Severity: Varies **Component:** dcp

Text: The '-local' option can only be used when dced and dcecp are in 'local' mode.

Explanation: In order to use the '-local' option, dcecp must have been invoked with the '-local' option also, and dced must be running in partial service mode, which allows it to accept local-only operations.

Action: Make sure dced is running in partial service mode, and that dcecp is invoked with the '-local' option.

0x1131f15a dcp_s_cadump_fail

Severity: Varies **Component:** dcp

Text: The cache dump failed in an indeterministic mode.

Explanation: The **cadump** routine, called by the **cdscache dump** command, does not provide information to the calling function with regard to failure mode.

Action: Contact the administrator.

0x1131f15b dcp_s_cadump_not_root

Severity: Varies **Component:** dcp

Text: This command can be executed as user 'root'.

Explanation: The **cadump** routine, called by the **cdscache dump** command, does not provide information to the calling function with regard to failure mode.

Action: Contact the administrator.

0x1131f15d dcp_s_cds_bad_attribute_list

Severity: Varies **Component:** dcp

Text: The attribute list syntax is invalid.

Explanation: The attribute list must contain pairs of entries *{attribute value}..*

Action: The attribute list syntax must be of the form *{attribute value}*. The *attribute* element is an attribute type, usually a string name. It can in some cases be an OID or a UUID. The *value* element is either a single value or multiple values. Reenter the command using the correct syntax.

0x1131f15e dcp_s_cds_bad_attribute_name

Severity: Varies **Component:** dcp

Text: The attribute name is not a recognized attribute.

Explanation: The attribute name was not recognized for the command.

Action: Check the documentation for a list of valid attributes and values for the command.

0x1131f15f dcp_s_cds_bad_attribute_type

Severity: Varies **Component:** dcp

Text: The attribute '%s' should be a multi-valued attribute type.

Explanation: The user attempted to perform an operation designed for multi-valued attribute on a single-valued attribute.

Action: Reenter the command. It may be possible to remove the entire attribute.

0x1131f162 dcp_s_cds_bad_timeout_value

Severity: Varies **Component:** dcp

Text: Illegal number of timeout values specified.

Explanation: The user tried to put in more than one timeout value.

Action: Reenter the command using a legal timeout value.

0x1131f158 dcp_s_cds_cache_show

Severity: Varies **Component:** dcp

Text: No clearinghouse or server option specified.

Explanation: The **show** operation requires the **-server** or **-clearinghouse** option.

Action: Reenter the command with either the **-server** or **-clearinghouse** option.

0x1131f14f dcp_s_cds_clh_replica_option

Severity: Varies **Component:** dcp

Text: The '-clearinghouse' option is invalid without the '-replica' option.

Explanation: The **-replica** and **-clearinghouse** options must be used together.

Action: Retype the command with a consistent set of options.

0x1131f13e dcp_s_cds_dir_created

Severity: Varies **Component:** dcp

Text: The directory '%s' was created.

Explanation: The directory was created despite a failure to add an attribute.

Action: None required.

0x1131f13f dcp_s_cds_dir_not_created

Severity: Varies **Component:** dcp

Text: The directory '%s' was not created.

Explanation: The directory was not created because of a failure to add an attribute.

Action: None required.

0x1131f141 dcp_s_cds_fname_too_long

Severity: Varies **Component:** dcp

Text: The CDS name '%s' is too long.

Explanation: The user supplied a **cds** name that is invalid because it is too long.

Action: Retype the command with a valid CDS name.

0x1131f14e dcp_s_cds_force_replica_option

Severity: Varies **Component:** dcp

Text: The '-force' option cannot be used with the '-replica' and '-clearinghouse' options.

Explanation: The **-replica** and **-clearinghouse** options may not be specified with **delete -force**.

Action: Retype the command with a consistent set of options.

0x1131f15c dcp_s_cds_ill_attr_val

Severity: Varies **Component:** dcp

Text: Attribute value is illegal.

Explanation: An attribute value was provided that is illegal for the given attribute.

Action: Reenter the command with a legal value.

0x1131f159 dcp_s_cds_illegal_byte_attr

Severity: Varies **Component:** dcp

Text: Illegal attribute value for cdsbyte style attribute.

Explanation: The *cdsbyte* type attribute must contain only hexadecimal value characters.

Action: Reenter the command with an appropriate value for the attribute.

0x1131f136 dcp_s_cds_internal_error

Severity: Varies **Component:** dcp

Text: CDS display internal error.

Explanation: There is an internal error in the cds or cdsclient functionality.

Action: Reenter the command with legal cds information.

0x1131f151 dcp_s_cds_invalid_confidence

Severity: Varies **Component:** dcp

Text: Invalid confidence level. Must be 'low', 'medium', or 'high'.

Explanation: An invalid confidence level was specified.

Action: Specify a valid confidence level on the command line.

0x1131f150 dcp_s_cds_merge_no_target

Severity: Varies **Component:** dcp

Text: No target directory specified.

Explanation: The **-into** option must be specified with **merge**.

Action: Retype the command with a consistent set of options.

0x1131f142 dcp_s_cds_no_attr_list_value

Severity: Varies **Component:** dcp

Text: No values exist in the attribute list.

Explanation: The function attempted to format a list of **cds** attributes when no attributes existed in the list.

Action: Verify that attribute entries exist for the object specified.

0x1131f140 dcp_s_cds_no_binding_specified

Severity: Varies **Component:** dcp

Text: No binding value was specified.

Explanation: The cache create command requires a binding value.

Action: Reenter the command with a binding value specified.

0x1131f156 dcp_s_cds_no_cache_name

Severity: Varies **Component:** dcp

Text: No cache name specified.

Explanation: The operation requires a cache name.

Action: Reenter the command with a cache name.

0x1131f157 dcp_s_cds_no_cache_server

Severity: Varies **Component:** dcp

Text: Cache server '%s' not found.

Explanation: The cache server name was not found.

Action: Reenter the command with a different cache server name.

0x1131f154 dcp_s_cds_no_cdsalias_name

Severity: Varies **Component:** dcp

Text: No cell alias name.

Explanation: No cell alias name was provided.

Action: Reenter the command with a cell alias name.

0x1131f134 dcp_s_cds_no_cds_client

Severity: Varies **Component:** dcp

Text: The name of the CDS client to operate on must be specified.

Explanation: A CDS client name is required to run this command.

Action: Run the command again specifying a CDS client name.

0x1131f133 dcp_s_cds_no_cds_server

Severity: Varies **Component:** dcp

Text: The name of the CDS server to operate on must be specified.

Explanation: A CDS server name is required to run this command.

Action: Run the command again specifying a CDS server name.

0x1131f160 dcp_s_cds_no_checkpoint

Severity: Varies **Component:** dcp

Text: The '-checkpoint' option is required.

Explanation: The user attempted to initiate an action on a specified clearinghouse yet failed to indicate which action to initiate.

Action: Reissue the command with the *-checkpoint* option.

0x1131f152 dcp_s_cds_no_clearinghouse_name

Severity: Varies **Component:** dcp

Text: No clearinghouse name.

Explanation: No clearinghouse name was provided.

Action: Reenter the command with a clearinghouse name.

0x1131f14c dcp_s_cds_no_clearinghouse_option

Severity: Varies **Component:** dcp

Text: Clearinghouse name not provided.

Explanation: The operation requires the **-clearinghouse** option.

Action: Retype the command with the **-clearinghouse** option.

0x1131f147 dcp_s_cds_no_dir_mod_operation

Severity: Varies **Component:** dcp

Text: Option not specified.

Explanation: The **directory modify** command requires one or more options.

Action: Retype the command with one or more of the following options: **-add**, **-remove**, **-change** or **-master..**

0x1131f13d dcp_s_cds_no_dir_name

Severity: Varies **Component:** dcp

Text: No directory name.

Explanation: The **directory** object was missing a directory name.

Action: The **directory** object takes a list of directory names as an argument. The names must be directory names. Reenter the command with a valid directory name.

0x1131f13c dcp_s_cds_no_handle

Severity: Varies **Component:** dcp

Text: Unable to retrieve cds handle.

Explanation: The cds handle can not be retrieved within the function.

Action: Reenter the command with different parameters.

0x1131f14b dcp_s_cds_no_link_mod_operation

Severity: Varies **Component:** dcp

Text: Option not specified.

Explanation: The **link modify** command requires one or more options.

Action: Retype the command with one or more of the following options: **-add**, **-remove**, or **-change**.

0x1131f144 dcp_s_cds_no_link_name

Severity: Varies **Component:** dcp

Text: No link name.

Explanation: The **link** object was missing a link name.

Action: The **link** object takes a list of link names as an argument. The names must be link names. Reenter the command with a valid link name.

0x1131f146 dcp_s_cds_no_linkto_value

Severity: Varies **Component:** dcp

Text: The directory to link to not specified.

Explanation: The **-to** option is required with the **link create** command.

Action: Retype the command with the required **-to** option.

0x1131f155 dcp_s_cds_no_member

Severity: Varies **Component:** dcp

Text: Member name not specified.

Explanation: The operation requires the **-member** option.

Action: Reenter the command with the **-member** option.

0x1131f145 dcp_s_cds_no_obj_mod_operation

Severity: Varies **Component:** dcp

Text: Option not specified.

Explanation: The **object modify** command requires one or more options.

Action: Retype the command with one or more of the following options: **-add**, **-remove**, or **-change**.

0x1131f143 dcp_s_cds_no_obj_name

Severity: Varies **Component:** dcp

Text: No object name.

Explanation: The **object** object was missing an object name.

Action: The **object** object takes a list of object names as an argument. The names must be object names. Reenter the command with a valid object name.

0x1131f161 dcp_s_cds_no_timestamps

Severity: Varies **Component:** dcp

Text: The **'-timestamps'** option is required.

Explanation: The user attempted to repair an entry within a specified clearinghouse yet failed to indicate which type of entry to repair.

Action: Reissue the command with the **-timestamps** option.

0x1131f153 dcp_s_cds_not_valid_clearinghouse

Severity: Varies **Component:** dcp

Text: Clearinghouse not found.

Explanation: An invalid clearinghouse name was specified.

Action: Reenter the command with the correct clearinghouse name.

0x1131f132 dcp_s_cds_only_one_client

Severity: Varies **Component:** dcp

Text: Only one CDS client may be specified for this command.

Explanation: More than one CDS client was specified on the command line.

Action: Run the command again specifying only one CDS client name.

0x1131f131 dcp_s_cds_only_one_server

Severity: Varies **Component:** dcp

Text: Only one CDS server may be specified for this command.

Explanation: More than one CDS server was specified on the command line.

Action: Run the command again specifying only one CDS server name.

0x1131f148 dcp_s_cds_single_no_add

Severity: Varies **Component:** dcp

Text: The '-single' option must be used with the '-add' option.

Explanation: The **-single** option can only be used to add a single valued attribute to an object.

Action: Retype the command with the **-add** option and the **-single** option to add a single-valued attribute.

0x1131f149 dcp_s_cds_single_no_attr

Severity: Varies **Component:** dcp

Text: The '-single' option must be used with the '-attribute' option.

Explanation: The **-single** option can only be used to create a single valued attribute on an object.

Action: Retype the command with the **-attribute** option and the **-single** option to create a single-valued attribute.

0x1131f14d dcp_s_cds_tree_replica_option

Severity: Varies **Component:** dcp

Text: The '-tree' option cannot be used with the '-replica' and '-clearinghouse' options.

Explanation: The **-replica** and **-clearinghouse** options may not be specified with **delete -tree**.

Action: Retype the command with a consistent set of options.

0x1131f14a dcp_s_cds_types_no_remove

Severity: Varies **Component:** dcp

Text: The '-types' option must be used with the '-remove' option.

Explanation: The **-types** option must be used to remove all values of a multi-valued attribute from an object.

Action: Retype the command with the **-remove** option and the **-types** option to remove a all values of a multi-valued attribute.

0x1131f163 dcp_s_cds_unknown_data_type

Severity: Varies **Component:** dcp

Text: unknown CDS data type

Explanation: The type returned does not match any known CDS type.

Action: No action required.

0x1131f135 dcp_s_cds_wrong_options

Severity: Varies **Component:** dcp

Text: The change epoch options cannot be used when modifying directory attributes.

Explanation: The clearinghouse info is not required to modify directory attributes.

Action: Do not specify any change epoch options on the command line.

0x1131f34a dcp_s_clock_abrupt_present

Severity: Varies **Component:** dcp

Text: When using '-dced' or '-inetd', the '-abruptly' option is not allowed.

Explanation: The command does not allow the **-abruptly** option when bypassing dtsd using **-dced**, or **-inetd**.

Action: Retype the command with the correct set of options.

0x1131f351 dcp_s_clock_dced_server_time_fail

Severity: Varies **Component:** dcp

Text: The dced time service failed to get current time.

Explanation: The call to the specified hostname via dced failed.

Action: Retype the command using a hostname with proper dced support.

0x1131f350 dcp_s_clock_get_dced_time_fail

Severity: Varies **Component:** dcp

Text: Could not get current time using dced services.

Explanation: The call to the specified hostname via dced failed.

Action: Retype the command using a hostname with dced support.

0x1131f352 dcp_s_clock_get_inetd_time_fail

Severity: Varies **Component:** dcp

Text: Could not get current time using inetd socket connection.

Explanation: The call to the specified hostname via inetd failed.

Action: Retype the command using a hostname with inetd support.

0x1131f34f dcp_s_clock_get_local_time_fail

Severity: Varies **Component:** dcp

Text: Could not get current time.

Explanation: The call to get the local system time failed.

Action: There is an internal DCE problem. This call should never fail.

0x1131f34d dcp_s_clock_missing_hostname

Severity: Varies **Component:** dcp

Text: Missing hostname.

Explanation: The **-dced** and **-inetd** options require the name of the host to ask about the time.

Action: Retype the command with the hostname parameter present.

0x1131f34c dcp_s_clock_set_bypass_and_hostname

Severity: Varies **Component:** dcp

Text: When using **'-bypass'**, specifying a hostname is not allowed.

Explanation: The command does not allow a hostname when using **-bypass**.

Action: Retype the command without the hostname.

0x1131f34b dcp_s_clock_set_bypass_and_others

Severity: Varies **Component:** dcp

Text: When using **'-bypass'**, other options are not allowed.

Explanation: The command does not allow other options when using **-bypass**.

Action: Retype the command without the extra options.

0x1131f349 dcp_s_clock_set_epoch_no_abrupt

Severity: Varies **Component:** dcp

Text: When just setting the epoch, the **'-abruptly'** option is not allowed.

Explanation: The command does not allow the **-abruptly** option when just setting the epoch with **-epoch**.

Action: Retype the command without the **-abruptly** option.

0x1131f353 dcp_s_clock_set_failed

Severity: Varies **Component:** dcp

Text: Could not set the system clock.

Explanation: Without using dtsd, could not set the system clock.

Action: Retype the command using dtsd to try and change the clock.

0x1131f345 dcp_s_clock_set_invalid_epoch

Severity: Varies **Component:** dcp

Text: Invalid epoch. The value must be in the range of [0..255].

Explanation: An invalid value was given to the **-epoch** option.

Action: Retype the command with a valid epoch in the range of [0..255].

0x1131f347 dcp_s_clock_set_need_abruptly

Severity: Varies **Component:** dcp

Text: '-abruptly' option not specified.

Explanation: An attempt was made to set the clock immediately to the specified time. The **-epoch** option requires the **-abruptly** option.

Action: Retype the command with the **-abruptly** and **-epoch** options.

0x1131f346 dcp_s_clock_set_need_epoch

Severity: Varies **Component:** dcp

Text: '-epoch' option not specified.

Explanation: An attempt was made to set the clock immediately to the specified time. The **-abruptly** option requires the **-epoch** option.

Action: Retype the command with the **-epoch** and **-abruptly** options.

0x1131f348 dcp_s_clock_set_need_time

Severity: Varies **Component:** dcp

Text: You must specify either the '-to' or '-epoch' option.

Explanation: The command requires the **-to** option to specify the time to change the clock to, or the **-epoch** option to specify a new epoch without changing the time.

Action: Retype the command with the **-to** or **-epoch** option.

0x1131f34e dcp_s_clock_time_conversion_fail

Severity: Varies **Component:** dcp

Text: Invalid absolute DTS style time string.

Explanation: An invalid time string was entered.

Action: Reenter the command with a valid DTS style absolute timestamp in the following format: **CCYY-MM-DD-hh:mm:ss.fff[+|-]hh:mm:ss.fff**.

0x1131f41e dcp_s_dhd_bad_attribute_list

Severity: Varies **Component:** dcp

Text: The attribute list must contain pairs of entries {attribute value}.

Explanation: User entered incorrect attribute list syntax.

Action: Reenter command with correct attribute list.

0x1131f41f dcp_s_dhd_bad_key_data

Severity: Varies **Component:** dcp

Text: The key data should contain principal, keytype, version number and password {princ keytype version passwd}.

Explanation: User entered incorrect key syntax.

Action: Please refer to documentation and reenter command with correct key data.

0x1131f423 dcp_s_dhd_data_attr_missing

Severity: Varies **Component:** dcp

Text: Data attribute is not specified on operation which requires data.

Explanation: User supplies no data attribute on an operation which requires data attribute to be specified.

Action: Reenter command with data attribute.

0x1131f422 dcp_s_dhd_data_on_entry_ops

Severity: Varies **Component:** dcp

Text: Data attribute specified on entry only operation.

Explanation: User requested to change data attributes when invoked as an entry only operation.

Action: Reenter command without data attribute.

0x1131f41c dcp_s_dhd_invalid_args

Severity: Varies **Component:** dcp

Text: Invalid or mismatched inputs or arguments '%s'.

Explanation: The function received wrong inputs or arguments.

Action: Check the inputs or arguments.

0x1131f425 dcp_s_dhd_miss_objname

Severity: Varies **Component:** dcp

Text: A 'dced' name missing object name.

Explanation: The dced name doesn't have object name as its last part.

Action: Reenter command with an object name.

0x1131f421 dcp_s_dhd_mod_invalid_attr

Severity: Varies **Component:** dcp

Text: Unchangeable attributes entered.

Explanation: User requested to change entry attributes which are not changeable.

Action: Reenter command with data attribute request only.

0x1131f41d dcp_s_dhd_no_object

Severity: Varies **Component:** dcp

Text: 'dced' object not specified.

Explanation: The command didn't supply the object name to operate on.

Action: Reenter the command with an object.

0x1131f426 dcp_s_dhd_too_many_ifnames

Severity: Varies **Component:** dcp

Text: More than one interface name has been specified.

Explanation: Only one interface name is allowed when using this option.

Action: Reenter command with only one interface name.

0x1131f420 dcp_s_dhd_too_many_opts

Severity: Varies **Component:** dcp

Text: There are too many options in command line.

Explanation: User entered incorrect command syntax.

Action: Reenter command.

0x1131f424 dcp_s_dhd_wrong_service_req

Severity: Varies **Component:** dcp

Text: A wrong 'dced' service has been requested.

Explanation: The user used a wrong dced service which does not match with the operation invoked.

Action: Reenter command with right dced service.

0x1131f13b dcp_s_dir_mod_bad_new_entry

Severity: Varies **Component:** dcp

Text: No replica exists at clearinghouse '%s'.

Explanation: An invalid clearinghouse name was specified.

Action: Reenter the command with the correct clearinghouse name.

0x1131f138 dcp_s_dir_mod_bad_num_dirs

Severity: Varies **Component:** dcp

Text: Only one directory can be specified.

Explanation: The user specified more than one directory on the command line.

Action: Reenter the command with only one directory.

0x1131f137 dcp_s_dir_mod_bad_num_masters

Severity: Varies **Component:** dcp

Text: Only one master clearinghouse can be specified.

Explanation: The user specified more than one master clearinghouse on the command line.

Action: Reenter the command with only one master clearinghouse.

0x1131f139 dcp_s_dir_mod_duplicate_found

Severity: Varies **Component:** dcp

Text: The same clearinghouse name was found more than once.

Explanation: The user specified the same clearinghouse more than once.

Action: Reenter the command with unique clearinghouse names.

0x1131f13a dcp_s_dir_mod_missing_new_entry

Severity: Varies **Component:** dcp

Text: The replica at clearinghouse '%s' was not specified.

Explanation: The new clearinghouse list was missing at least one entry.

Action: Reenter the command with the correct entries.

0x1131f32f dcp_s_dts_bind_file_open_fail

Severity: Varies **Component:** dcp

Text: Can not read dtsd bindings file. Check to see if dtsd is running.

Explanation: Could not open the binding file.

Action: Make sure dtsd is running and that the binding file exists.

0x1131f333 dcp_s_dts_comm_failure

Severity: Varies **Component:** dcp

Text: Unable to contact the specified dts server.

Explanation: The dts server, though valid, seems to not be running.

Action: Start the server and try the command again.

0x1131f332 dcp_s_dts_modify_excl_opts

Severity: Varies **Component:** dcp

Text: The '-change' option can not be used with the individual attribute options.

Explanation: One or more of the individual options was used with -change.

Action: Retype the command with the correct options.

0x1131f331 dcp_s_dts_modify_invalid_courier_role

Severity: Varies **Component:** dcp

Text: Invalid courier role.

Explanation: The server courier role could not be modified because the role entered was invalid.

Action: The valid courier roles are **backup** (default), **courier** and **noncourier**. A server connected to an external time provider cannot have the **courier** role. Reenter the command with a valid courier role.

0x1131f334 dcp_s_dts_no_more_bindings

Severity: Varies **Component:** dcp

Text: Unable to find appropriate DTS interface at '%s'.

Explanation: The entry in the namespace did not have any bindings that matched the required interface. This could be because the entry was not one for a **DTS** entity, or that the **DTS** entity specified does not support the correct interface version.

Action: Verify that the namespace entry specified corresponds to a valid **DTS** entity that supports the appropriate interface version for communicating with dcecp.

0x1131f330 dcp_s_dts_time_conversion_fail

Severity: Varies **Component:** dcp

Text: Invalid DTS style timestamp.

Explanation: Conversion of the entered timestamp failed.

Action: Retype the command with a valid timestamp. DTS only uses V1.0 timestamps.

0x1131f02b dcp_s_errtext_invalid_code

Severity: Varies **Component:** dcp

Text: The value '%s' is not a valid integer error code.

Explanation: The user entered an invalid error code.

Action: Retype the command with a valid error code.

0x1131f012 dcp_s_expected_float_arg

Severity: Varies **Component:** dcp

Text: Expected a floating point argument for '%s' but received '%s'.

Explanation: The argument was not a valid floating point number.

Action: Retype the command with a floating point number as an argument.

0x1131f00e dcp_s_expected_int_arg

Severity: Varies **Component:** dcp

Text: Expected integer argument for '%s' but received '%s'.

Explanation: A non-integer was given to an option that expects one.

Action: Retype the command with a valid argument.

0x1131f2aa dcp_s_gid_not_allowed

Severity: Varies **Component:** dcp

Text: Unrecognized attribute 'gid'.

Explanation: The user supplied bad attribute name. The **group** object takes only the **gid** as a valid group identification specifier.

Action: Reenter the command and use the correct user identification specifier.

0x1131f02a dcp_s_help_no_verbose

Severity: Varies **Component:** dcp

Text: Verbose help is only available for objects, not verbs.

Explanation: The user entered a request for help of the form 'OBJ help VERB -verbose', where only 'OBJ help -verbose' is supported.

Action: Retype the command with only an object name.

0x1131f029 dcp_s_illegal_command

Severity: Varies **Component:** dcp

Text: This command is not allowed from the command line.

Explanation: Due to security considerations, the attempted command is not allowed from the command line.

Action: Use the program interactively to use this command.

0x1131f028 dcp_s_initial_context_fail

Severity: Varies **Component:** dcp

Text: Error in getting initial login context.

Explanation: A failure occurred attempting to get the initial login context.

Action: Check the security service and system resources.

0x1131f3ff dcp_s_kt_bad_key_type

Severity: Varies **Component:** dcp

Text: keytab only supports 'plain' key.

Explanation: The command supplied wrong key type.

Action: Reenter the command with supported key type.

0x1131f400 dcp_s_kt_bad_key_value

Severity: Varies **Component:** dcp

Text: The command supplied wrong key value: '%s'.

Explanation: A plain key value is a string and a des key value is \xhh\xhh\xhh\xhh\xhh\xhh\xhh\xhh or \ooo\ooo \ooo\ooo\ooo\ooo\ooo\ooo.

Action: Reenter the command with correct key value.

0x1131f401 dcp_s_kt_key_value_missing

Severity: Varies **Component:** dcp

Text: The command didn't supply a key value.

Explanation: The plain key has to be present, a des key can only be omitted if a '-random' option is present.

Action: Reenter the command with key value.

0x1131f3fe dcp_s_kt_missing_key_version

Severity: Varies **Component:** dcp

Text: Required key version not entered.

Explanation: To add (non-random) key, the key version is not optional.

Action: Retype the command with key version or just request a random key.

0x1131f01f dcp_s_list_too_long

Severity: Varies **Component:** dcp

Text: The list {%s} contains too many elements.

Explanation: The command expected less elements than provided.

Action: Retype the command with correct list structure.

0x1131f01e dcp_s_list_too_short

Severity: Varies **Component:** dcp

Text: The list {%s} contains too few elements.

Explanation: The command expected more elements than provided.

Action: Retype the command with correct list structure.

0x1131f044 dcp_s_login_bad_pw_read

Severity: Varies **Component:** dcp

Text: Interactive read of the password failed.

Explanation: The secure read password call failed.

Action: Contact your system administrator.

0x1131f041 dcp_s_login_euid_not_uid

Severity: Varies **Component:** dcp

Text: The effective and real user ids are not the same

Explanation: The effective and real user ids are different. Reading from a keytab file with an effective user id that is different from the real user id is a security hole and is not allowed.

Action: Rerun the command without the **-keytab** option, or make sure that the effective uid matches the real uid.

0x1131f047 dcp_s_login_from_local_override

Severity: Varies **Component:** dcp

Text: Validated from local override entry, no network credentials obtained.

Explanation: The credentials were obtained from local override.

Action: Format the command so the credentials are obtained from master.

0x1131f042 dcp_s_login_get_context_fail

Severity: Varies **Component:** dcp

Text: Unable to get the current context for refresh.

Explanation: The command was not able to acquire the user's current DCE login context.

Action: Verify that the user does have a valid context for refreshing. A new context can be created by specifying a username and not specifying **-refresh**.

0x1131f048 dcp_s_login_invalid_pw

Severity: Varies **Component:** dcp

Text: Password validation failure.

Explanation: The user entered an invalid username or password.

Action: The user must enter a valid username and password.

0x1131f049 dcp_s_login_invalid_user

Severity: Varies **Component:** dcp

Text: User identification failure.

Explanation: The user entered an invalid username or password.

Action: The user must enter a valid username and password.

0x1131f046 dcp_s_login_local_creds

Severity: Varies **Component:** dcp

Text: Credentials obtained from local registry.

Explanation: The credentials were obtained from the local registry.

Action: Format the command so the credentials are obtained from master.

0x1131f03e dcp_s_login_needs_user

Severity: Varies **Component:** dcp

Text: The login command requires a username argument.

Explanation: The user did not supply the required username argument.

Action: Retype the command with a valid username.

0x1131f040 dcp_s_login_no_ktb_and_pass

Severity: Varies **Component:** dcp

Text: The -keytab and -password options are mutually exclusive.

Explanation: The user supplied both the **-keytab** and **-password** options together. This is not allowed.

Action: Retype the command with a valid set of options and arguments.

0x1131f043 dcp_s_login_refresh_fail

Severity: Varies **Component:** dcp

Text: Unable to refresh the current context.

Explanation: The command was not able to refresh the user's current DCE login context.

Action: Verify that the user does have a valid context for refreshing. A new context can be created by specifying a username and not specifying **-refresh**.

0x1131f03f dcp_s_login_refresh_no_user

Severity: Varies **Component:** dcp

Text: Do not specify a username when using the `-refresh` option.

Explanation: The user specified a username and the **-refresh** option together.

Action: Retype the command with a valid set of options and arguments.

0x1131f045 dcp_s_login_reset_password

Severity: Varies **Component:** dcp

Text: Password must be changed!

Explanation: The current password must be changed.

Action: Change the login password.

0x1131f35d dcp_s_log_inv_routing

Severity: Varies **Component:** dcp

Text: Bad routing specification.

Explanation: The routing specified failed validation.

Action: Reenter the command with a valid routing specification.

0x1131f35e dcp_s_log_no_debug

Severity: Varies **Component:** dcp

Text: Debug option used without DCE_DEBUG defined.

Explanation: An attempt was made to show debug routing specifications, but the DCE_DEBUG variable is not defined.

Action: Reenter the command after DCE is built with DCE_DEBUG defined.

0x1131f35c dcp_s_log_no_modify_op

Severity: Varies **Component:** dcp

Text: Requires more options.

Explanation: An attempt was made to modify the routing specifications, but no **-change** option was included.

Action: Reenter the command with the **-change** option.

0x1131f35b dcp_s_log_no_server

Severity: Varies **Component:** dcp

Text: Server process not specified.

Explanation: The command did not contain the name of a server process to operate on.

Action: Reenter the command with a server process.

0x1131f2ac dcp_s_maxuid_is_negative

Severity: Varies **Component:** dcp

Text: The 'maxuid' attribute must be a positive integer.

Explanation: The **maxuid** attribute must be a positive integer. Negative integers are not allowed.

Action: Reenter the command and provide a positive **maxuid** integer as an attribute value.

0x1131f2ad dcp_s_maxuid_not_int

Severity: Varies **Component:** dcp

Text: The 'maxuid' attribute must be an integer.

Explanation: The **maxuid** attribute provided is not an integer. The **maxuid** attribute must be a positive integer.

Action: Reenter the command and provide a positive **maxuid** integer as an attribute value.

0x1131f2ab dcp_s_maxuid_out_of_range

Severity: Varies **Component:** dcp

Text: The 'maxuid' attribute must be less than %d.

Explanation: The **maxuid** attribute must be a positive integer less than the maximum for a 32 bit integer.

Action: Reenter the command and provide a positive **maxuid** integer, less than the maximum for a 32 bit integer, as an attribute value.

0x1131f2b6 dcp_s_mingid_is_negative

Severity: Varies **Component:** dcp

Text: The 'mingid' attribute must be a positive integer.

Explanation: The **mingid** attribute must be a positive integer. Negative integers are not allowed.

Action: Reenter the command and provide a positive **mingid** integer as an attribute value.

0x1131f2b4 dcp_s_mingid_not_int

Severity: Varies **Component:** dcp

Text: The 'mingid' attribute must be an integer.

Explanation: The **mingid** attribute provided is not an integer. The **mingid** attribute must be a positive integer.

Action: Reenter the command and provide a positive **mingid** integer as an attribute value.

0x1131f2b5 dcp_s_mingid_out_of_range

Severity: Varies **Component:** dcp

Text: The 'mingid' attribute must be less than %d.

Explanation: The **mingid** attribute must be a positive integer less than the maximum allowed for a 32 bit integer.

Action: Reenter the command and provide a positive **mingid** integer, less than the maximum allowed for a 32 bit integer, as an attribute value.

0x1131f2b0 dcp_s_minorgid_is_negative

Severity: Varies **Component:** dcp

Text: The 'minorgid' attribute must be a positive integer.

Explanation: The **minorgid** attribute must be a positive integer. Negative integers are not allowed.

Action: Reenter the command and provide a positive **minorgid** integer as an attribute value.

0x1131f2ae dcp_s_minorgid_not_int

Severity: Varies **Component:** dcp

Text: The 'minorgid' attribute must be an integer.

Explanation: The **minorgid** attribute provided is not an integer. The **minorgid** attribute must be a positive integer.

Action: Reenter the command and provide a positive **minorgid** integer as an attribute value.

0x1131f2af dcp_s_minorgid_out_of_range

Severity: Varies **Component:** dcp

Text: The 'minorgid' attribute must be less than %d.

Explanation: The **minorgid** attribute must be a positive integer less than the maximum allowed for a 32 bit integer.

Action: Reenter the command and provide a positive **minorgid** integer, less than the maximum allowed for a 32 bit integer, as an attribute value.

0x1131f2b3 dcp_s_minuid_is_negative

Severity: Varies **Component:** dcp

Text: The 'minuid' attribute must be a positive integer.

Explanation: The **minuid** attribute must be a positive integer. Negative integers are not allowed.

Action: Reenter the command and provide a positive **minuid** integer as an attribute value.

0x1131f2b1 dcp_s_minuid_not_int

Severity: Varies **Component:** dcp

Text: The 'minuid' attribute must be an integer.

Explanation: The **minuid** attribute provided is not an integer. The **minuid** attribute must be a positive integer.

Action: Reenter the command and provide a positive **minuid** integer as an attribute value.

0x1131f2b2 dcp_s_minuid_out_of_range

Severity: Varies **Component:** dcp

Text: The 'minuid' attribute must be less than %d.

Explanation: The **minuid** attribute must be a positive integer less than the maximum allowed for a 32 bit integer.

Action: Reenter the command and provide a positive **minuid** integer, less than the maximum allowed for a 32 bit integer, as an attribute value.

0x1131f021 dcp_s_missing_req_opts

Severity: Varies **Component:** dcp

Text: Required options not entered.

Explanation: Required options to the command were not entered.

Action: Retype the command with all required options.

0x1131f023 dcp_s_mut_excl_opts

Severity: Varies **Component:** dcp

Text: Mutually exclusive options entered.

Explanation: The options entered for the command cannot be used together.

Action: Retype the command with the correct options.

0x1131f019 dcp_s_mutex_init_fail

Severity: Varies **Component:** dcp

Text: Mutex initialization failed.

Explanation: An attempt to initialize a mutex failed.

Action: Check system resources.

0x1131f01a dcp_s_mutex_lock_fail

Severity: Varies **Component:** dcp

Text: Mutex lock failed.

Explanation: An attempt to lock a mutex failed.

Action: Check system resources.

0x1131f01b dcp_s_mutex_unlock_fail

Severity: Varies **Component:** dcp

Text: Mutex unlock failed.

Explanation: An attempt to unlock a mutex failed.

Action: Check system resources.

0x1131f00a dcp_s_need_arg

Severity: Varies **Component:** dcp

Text: The command requires at least one argument.

Explanation: The command received no arguments.

Action: Retype the command with at least one argument.

0x1131f018 dcp_s_need_opt

Severity: Varies **Component:** dcp

Text: The command requires at least one option.

Explanation: The command received no options.

Action: Retype the command with the correct options.

0x1131f004 dcp_s_no_memory

Severity: Varies **Component:** dcp

Text: Could not allocate memory.

Explanation: Ran out of virtual memory.

Action: Acquire more memory.

0x1131f04a dcp_s_not_logged_in

Severity: Varies **Component:** dcp

Text: You are not logged in to the security service.

Explanation: A logout operation was attempted without a login context.

Action: Login first.

0x1131f00d dcp_s_null_arg

Severity: Varies **Component:** dcp

Text: The empty list is not a valid argument.

Explanation: The command received an empty list as an argument.

Action: Retype the command with correct arguments.

0x1131f027 dcp_s_object_needs_verb

Severity: Varies **Component:** dcp

Text: This object requires a verb to form a command.

Explanation: The user specified an object name only on the command line.

Action: Retype the command with a correct object verb pair.

0x1131f003 dcp_s_ok

Severity: Varies **Component:** dcp

Text: Successful completion

Explanation: Operation performed.

Action: None required.

0x1131f011 dcp_s_opt_requires_float

Severity: Varies **Component:** dcp

Text: The '%s' option requires a floating point value.

Explanation: Command requires a float argument.

Action: Retype the command with a valid argument.

0x1131f00f dcp_s_opt_requires_int

Severity: Varies **Component:** dcp

Text: The '%s' option requires an integer value.

Explanation: Command requires an integer argument.

Action: Retype the command with a valid argument.

0x1131f022 dcp_s_opt_requires_more_args

Severity: Varies **Component:** dcp

Text: The '%s' option requires more arguments.

Explanation: The indicated option requires more arguments than were provided.

Action: Retype the command with the correct arguments for the options.

0x1131f010 dcp_s_opt_requires_string

Severity: Varies **Component:** dcp

Text: The '%s' option requires a character string value.

Explanation: Command requires a string argument.

Action: Retype the command with a valid argument.

0x1131f2b7 dcp_s_orgid_not_allowed

Severity: Varies **Component:** dcp

Text: Unrecognized attribute 'orgid'.

Explanation: The user supplied bad attribute name. The **organization** object takes only the **orgid** as a valid organization identification specifier.

Action: Reenter the command and use the correct organization identification specifier.

0x1131f04b dcp_s_purge_initial_context

Severity: Varies **Component:** dcp

Text: You are not allowed to logout of an inherited context.

Explanation: A logout operation was attempted on an inherited login context.

Action: You can only **logout** of a context you created with a dcecp **login** command.

0x1131f04d dcp_s_resolve_bad_version

Severity: Varies **Component:** dcp

Text: Interface version number not recognizable.

Explanation: The interface version number is not valid. The interface and version should be of the form **UUID,major.minor** or a **TCL** list **{UUID major.minor}**.

Action: Reenter the command with the correct interface and version.

0x1131f04c dcp_s_resolve_need_binding

Severity: Varies **Component:** dcp

Text: The 'resolve' command requires a binding as an argument.

Explanation: The required binding was not supplied to the resolve command.

Action: Retype the command supplying a binding.

0x1131f04f dcp_s_resolve_need_if

Severity: Varies **Component:** dcp

Text: The resolve command requires the '-interface' option with an interface.

Explanation: The required interface was not supplied to the resolve command.

Action: Retype the command supplying an interface.

0x1131f04e dcp_s_resolve_not_found

Severity: Varies **Component:** dcp

Text: No binding found for interface.

Explanation: No full binding found for string binding and interface provided.

Action: Check the interface and version to verify they are correct.

0x1131f2db dcp_s_rgy_acct_desc_long

Severity: Varies **Component:** dcp

Text: Account description too long. Maximum description length is %d.

Explanation: The description is too long. It currently exceeds the limit allowed by the registry.

Action: Reissue the command and provide a shorter **description**.

0x1131f2dc dcp_s_rgy_acct_home_long

Severity: Varies **Component:** dcp

Text: Account home name too long. Maximum home name length is %d.

Explanation: The home is too long. It currently exceeds the indicated limit allowed by the registry.

Action: Reissue the command and provide a shorter **home**.

0x1131f2d2 dcp_s_rgy_acct_is_bad

Severity: Varies **Component:** dcp

Text: Supplied 'acctlife' is a bad date value.

Explanation: Bad account lifetime parameter supplied. The attribute value supplied for **acctlife** should be an UTC relative date string.

Action: Reenter the command giving a UTC date for the account lifetime.

0x1131f2d7 dcp_s_rgy_acct_no_group

Severity: Varies **Component:** dcp

Text: Required group name attribute not provided.

Explanation: The **create** command requires that a **group** attribute be supplied with the command. This allows the registry to associate a group with the account.

Action: Reissue the command supplying the **group** attribute in an attribute list or as a **-group** option.

0x1131f2d8 dcp_s_rgy_acct_no_org

Severity: Varies **Component:** dcp

Text: Required organization name attribute not provided.

Explanation: The **create** command requires that an **organization** attribute be supplied with the command. This allows the registry to associate an **organization** with the account.

Action: Reissue the command supplying the **organization** attribute in an attribute list or as a **-organization** option.

0x1131f2d9 dcp_s_rgy_acct_no_passwd

Severity: Varies **Component:** dcp

Text: Account password not entered correctly.

Explanation: Each **account** requires a **password**. A **password** attribute was not found in a **-password** option or in an attribute list.

Action: Reissue the command providing a **password** for the account in either the **-password** option or in an attribute list.

0x1131f2da dcp_s_rgy_acct_passwd_long

Severity: Varies **Component:** dcp

Text: Account password too long. Maximum password length is %d.

Explanation: The password is too long. It currently exceeds the limit allowed by the registry.

Action: Reissue the command and provide a shorter **password**.

0x1131f2dd dcp_s_rgy_acct_shell_long

Severity: Varies **Component:** dcp

Text: Account shell name too long. Maximum shell name length is %d.

Explanation: The shell is too long. It currently exceeds the limit allowed by the registry.

Action: Reissue the command and provide a shorter **shell**.

0x1131f294 dcp_s_rgy_ambig_acl_mgr_name

Severity: Varies **Component:** dcp

Text: Ambiguous ACL manager name.

Explanation: The name specified for the ACL manager set is ambiguous.

Action: Reenter the command with a correct aclmgr name.

0x1131f291 dcp_s_rgy_ambig_encoding_type

Severity: Varies **Component:** dcp

Text: Encoding type is ambiguous.

Explanation: The specified encoding type for the schema is ambiguous.

Action: Reenter the command with a known encoding type.

0x1131f296 dcp_s_rgy_ambig_intercell_action

Severity: Varies **Component:** dcp

Text: Ambiguous intercell action.

Explanation: The value specified for the intercell action is ambiguous.

Action: Reenter the command with a correct intercell action value.

0x1131f298 dcp_s_rgy_ambig_trigger_type

Severity: Varies **Component:** dcp

Text: Ambiguous trigger type.

Explanation: The value specified for the trigger type is ambiguous.

Action: Reenter the command with a correct trigger type.

0x1131f28e dcp_s_rgy_bad_acctlife_attr_val

Severity: Varies **Component:** dcp

Text: The 'acctlife' attribute requires a single value.

Explanation: The *acctlife* attribute requires a single value not a list of values or a void value.

Action: Reenter the command and provide a single attribute value.

0x1131f282 dcp_s_rgy_bad_alias_attr_val

Severity: Varies **Component:** dcp

Text: The 'alias' attribute requires a single value.

Explanation: The *alias* attribute requires a single value not a list of values or a void value.

Action: Reenter the command and provide a single attribute value.

0x1131f2c2 dcp_s_rgy_bad_attribute_list

Severity: Varies **Component:** dcp

Text: The attribute list syntax is invalid.

Explanation: The attribute list syntax was not of the form *{attribute value}*..

Action: The attribute list syntax must be of the form *{attribute value}*. The *attribute* element is an attribute type, usually a string name. It can in some cases be an OID or a UUID. The *value* element is either a single value or multiple values. Reenter the command using the correct syntax.

0x1131f2c3 dcp_s_rgy_bad_attribute_name

Severity: Varies **Component:** dcp

Text: The attribute name is not a recognized attribute.

Explanation: The attribute name was not recognized for the command.

Action: Check the documentation for the object for a list of valid attributes and reenter the command.

0x1131f2c4 dcp_s_rgy_bad_attribute_value

Severity: Varies **Component:** dcp

Text: The attribute value is a single value not a list of values.

Explanation: The attribute value should be a single value not a list of values.

Action: Reenter the command with a single attribute value as opposed to a list of values.

0x1131f2a8 dcp_s_rgy_bad_exptime

Severity: Varies **Component:** dcp

Text: Bad 'pwdexptime' date string supplied.

Explanation: Bad password expiration date supplied. The attribute value supplied for **pwdexptime** should be an UTC relative date string.

Action: Reenter the command giving a UTC date for the pwdexptime attribute.

0x1131f284 dcp_s_rgy_bad_fullname_attr_val

Severity: Varies **Component:** dcp

Text: The 'fullname' attribute requires a single value.

Explanation: The *fullname* attribute requires a single value not a list of values or a void value.

Action: Reenter the command and provide a single attribute value.

0x1131f286 dcp_s_rgy_bad_gid_attr_val

Severity: Varies **Component:** dcp

Text: The 'gid' attribute requires a single value.

Explanation: The *gid* attribute requires a single value not a list of values or a void value.

Action: Reenter the command and provide a single attribute value.

0x1131f283 dcp_s_rgy_bad_inprojlist_attr_val

Severity: Varies **Component:** dcp

Text: The 'inprojlist' attribute requires a single value.

Explanation: The *inprojlist* attribute requires a single value not a list of values or a void value.

Action: Reenter the command and provide a single attribute value.

0x1131f287 dcp_s_rgy_bad_orgid_attr_val

Severity: Varies **Component:** dcp

Text: The 'orgid' attribute requires a single value.

Explanation: The *orgid* attribute requires a single value not a list of values or a void value.

Action: Reenter the command and provide a single attribute value.

0x1131f28d dcp_s_rgy_bad_pwdalpha_attr_val

Severity: Varies **Component:** dcp

Text: The 'pwdalpha' attribute requires a single value.

Explanation: The *pwdalpha* attribute requires a single value not a list of values or a void value.

Action: Reenter the command and provide a single attribute value.

0x1131f28b dcp_s_rgy_bad_pwdexpdate_attr_val

Severity: Varies **Component:** dcp

Text: The 'pwdexpdate' attribute requires a single value.

Explanation: The *pwdexpdate* attribute requires a single value not a list of values or a void value.

Action: Reenter the command and provide a single attribute value.

0x1131f289 dcp_s_rgy_bad_pwdlife_attr_val

Severity: Varies **Component:** dcp

Text: The 'pwdlife' attribute requires a single value.

Explanation: The *pwdlife* attribute requires a single value not a list of values or a void value.

Action: Reenter the command and provide a single attribute value.

0x1131f28a dcp_s_rgy_bad_pwdminlen_attr_val

Severity: Varies **Component:** dcp

Text: The 'pwdminlen' attribute requires a single value.

Explanation: The *pwdminlen* attribute requires a single value not a list of values or a void value.

Action: Reenter the command and provide a single attribute value.

0x1131f28c dcp_s_rgy_bad_pwdspaces_attr_val

Severity: Varies **Component:** dcp

Text: The 'pwdspaces' attribute requires a single value.

Explanation: The *pwdspaces* attribute requires a single value not a list of values or a void value.

Action: Reenter the command and provide a single attribute value.

0x1131f281 dcp_s_rgy_bad_quota_attr_val

Severity: Varies **Component:** dcp

Text: The 'quota' attribute requires a single value.

Explanation: The *quota* attribute requires a single value not a list of values or a void value.

Action: Reenter the command and provide a single attribute value.

0x1131f2c8 dcp_s_rgy_bad_reftime_string

Severity: Varies **Component:** dcp

Text: Bad relative time string supplied.

Explanation: The relative time string that was provided is not convertible to a UTC structure.

Action: Reissue the command with an appropriate ISO time string.

0x1131f2bc dcp_s_rgy_bad_schema_name

Severity: Varies **Component:** dcp

Text: Not a fully qualified schema name.

Explanation: The **schema** object was not formatted correctly.

Action: The **schema** object takes a list of fully-qualified schema names as an argument. Reenter the command with a fully-qualified schema name.

0x1131f2c7 dcp_s_rgy_bad_time_string

Severity: Varies **Component:** dcp

Text: Bad time string supplied.

Explanation: The time string that was provided is not convertible to a Coordinated Universal Time structure.

Action: Reissue the command with an appropriate ISO time string.

0x1131f285 dcp_s_rgy_bad_uid_attr_val

Severity: Varies **Component:** dcp

Text: The 'uid' attribute requires a single value.

Explanation: The *uid* attribute requires a single value not a list of values or a void value.

Action: Reenter the command and provide a single attribute value.

0x1131f2e5 dcp_s_rgy_bad_use_of_types_option

Severity: Varies **Component:** dcp

Text: Illegal use of '-type' option.

Explanation: Can only use the type option if the '-remove' option is also chosen.

Action: Reenter the command with a legal combination of options.

0x1131f29a dcp_s_rgy_bad_use_of_verbose

Severity: Varies **Component:** dcp

Text: The '-verbose' option may only be used with the '-replica' option.

Explanation: Trying to get replist information with the wrong options.

Action: Reenter the command with the correct options.

0x1131f288 dcp_s_rgy_bad_uuid_attr_val

Severity: Varies **Component:** dcp

Text: The 'uuid' attribute requires a single value.

Explanation: The *uuid* attribute requires a single value not a list of values or a void value.

Action: Reenter the command and provide a single attribute value.

0x1131f2a1 dcp_s_rgy_checkpoint_bad_cpi

Severity: Varies **Component:** dcp

Text: An invalid registry checkpoint time was specified.

Explanation: The checkpoint time was invalid or incorrect.

Action: Reenter the command and specify a correct checkpoint time.

0x1131f27c dcp_s_rgy_con_bad_cell

Severity: Varies **Component:** dcp

Text: Unable to parse cell name '%s'.

Explanation: The *connect* process was unable to parse the cell name into separate components.

Action: Reissue the command with the correct cell name.

0x1131f27e dcp_s_rgy_con_no_cell_name

Severity: Varies **Component:** dcp

Text: No cell name.

Explanation: The required cell name that was to be connected to is not supplied.

Action: Reissue the command with a cell name to connect to.

0x1131f27b dcp_s_rgy_con_no_cred

Severity: Varies **Component:** dcp

Text: Unable to obtain network credentials.

Explanation: The *connect* process was unable to login to the foreign cell.

Action: Reissue the command with the correct foreign account password.

0x1131f277 dcp_s_rgy_con_no_faccount

Severity: Varies **Component:** dcp

Text: Foreign account not specified.

Explanation: The foreign account name is required for this command.

Action: Reissue the command with the foreign account name specified.

0x1131f27d dcp_s_rgy_con_no_fmypwd

Severity: Varies **Component:** dcp

Text: The foreign users password must be supplied.

Explanation: The *connect* verb needs the foreign users password to execute.

Action: Reissue the command with the accounts foreign password.

0x1131f276 dcp_s_rgy_con_no_forg

Severity: Varies **Component:** dcp

Text: Foreign organization name not specified.

Explanation: The foreign organization name is required for this command.

Action: Reissue the command with the foreign organization name specified.

0x1131f279 dcp_s_rgy_con_no_group

Severity: Varies **Component:** dcp

Text: Local group not specified.

Explanation: The local group name is required for this command.

Action: Reissue the command with the group name specified.

0x1131f27a dcp_s_rgy_con_no_mypwd

Severity: Varies **Component:** dcp

Text: The users password must be supplied.

Explanation: The *connect* verb needs the users password to execute.

Action: Reissue the command with the users local password.

0x1131f278 dcp_s_rgy_con_no_org

Severity: Varies **Component:** dcp

Text: Local organization not specified.

Explanation: The local organization name is required for this command.

Action: Reissue the command with the organization name specified.

0x1131f280 dcp_s_rgy_con_no_set_fvalid

Severity: Varies **Component:** dcp

Text: Unable to set the local account valid on the foreign cell.

Explanation: The command is unable to modify the existing local account on the foreign cell and set it to valid.

Action: Reissue the command using correct foreign cell information.

0x1131f27f dcp_s_rgy_con_no_set_valid

Severity: Varies **Component:** dcp

Text: Unable to set/unset the foreign account validity on the local cell.

Explanation: The command is unable to modify the existing foreign account on the local cell and set/unset its validity.

Action: Reissue the command using correct local cell information.

0x1131f2ec dcp_s_rgy_era_any_ambig_enc_type

Severity: Varies **Component:** dcp

Text: Encoding type specified for the 'any' attribute is ambiguous.

Explanation: The encoding type specified for the attribute of encoding type 'any' is not one of the legal encoding types.

Action: Reenter the command with a known encoding type.

0x1131f2ed dcp_s_rgy_era_any_illegal_enc_type

Severity: Varies **Component:** dcp

Text: Encoding type 'any' cannot be used when specifying values for attributes.

Explanation: The encoding type specified for the attribute of encoding type 'any' is not allowed to be assigned to an object.

Action: Reenter the command with a legal encoding type.

0x1131f2ee dcp_s_rgy_era_any_illegal_remove

Severity: Varies **Component:** dcp

Text: Improper syntax used when attempting to remove an 'any' attribute.

Explanation: To remove an 'any' attribute in this way, the user must specify the types option.

Action: Reenter the command using the types option.

0x1131f2eb dcp_s_rgy_era_any_unknown_enc_type

Severity: Varies **Component:** dcp

Text: Encoding type specified for the 'any' attribute is unknown.

Explanation: The encoding type specified for the attribute of encoding type 'any' is not one of the legal encoding types.

Action: Reenter the command with a known encoding type.

0x1131f2e0 dcp_s_rgy_era_codeset_not_valid

Severity: Varies **Component:** dcp

Text: The specified codeset is invalid.

Explanation: The codeset portion of the i18ndata element must be either a valid codeset name or a valid codeset integer value.

Action: Reenter the command with a valid codeset value.

0x1131f2f2 dcp_s_rgy_era_illegal_attribute_list

Severity: Varies **Component:** dcp

Text: Illegal combination of attributes specified on command line.

Explanation: Duplicate or illegal attributes were specified for the command.

Action: Reenter the command with a legal list of attributes.

0x1131f2f3 dcp_s_rgy_era_illegal_change_command

Severity: Varies **Component:** dcp

Text: Cannot change an attribute which has an encoding type of 'void'.

Explanation: Attribute of encoding type **void** cannot be changed.

Action: Reenter the command with a legal list of attributes.

0x1131f2f1 dcp_s_rgy_era_illegal_switches

Severity: Varies **Component:** dcp

Text: Illegal combination of modify options specified on command line.

Explanation: Only one modify option can be selected for each given command.

Action: Reenter the command with a legal modify option.

0x1131f2f5 dcp_s_rgy_era_internal_error

Severity: Varies **Component:** dcp

Text: Extended attribute internal error.

Explanation: There is an internal error in the extended attribute functionality.

Action: Reenter the command with legal extended attribute information.

0x1131f2fb dcp_s_rgy_era_invalid_authentication

Severity: Varies **Component:** dcp

Text: Invalid authentication service.

Explanation: The authentication service specified as part of a binding is invalid.

Action: Reenter the command with a correct binding.

0x1131f2fc dcp_s_rgy_era_invalid_authorization

Severity: Varies **Component:** dcp

Text: Invalid authorization service.

Explanation: The authorization service specified as part of a binding is invalid.

Action: Reenter the command with a correct binding.

0x1131f2f8 dcp_s_rgy_era_invalid_binding_syntax

Severity: Varies **Component:** dcp

Text: Invalid binding syntax.

Explanation: The binding specified for an attribute is invalid.

Action: Reenter the command with a correct binding.

0x1131f2e1 dcp_s_rgy_era_invalid_byte

Severity: Varies **Component:** dcp

Text: Supplied value for extended attribute is not a valid byte sequence.

Explanation: The value of this extended attribute must be a sequence of bytes represented by hexadecimal integers, optionally separated by white space.

Action: Reenter the command with a sequence of hexadecimal integers for the extended attribute.

0x1131f2f9 dcp_s_rgy_era_invalid_i18ndata_syntax

Severity: Varies **Component:** dcp

Text: The syntax of the specified i18ndata element is invalid.

Explanation: The format of the i18ndata object is invalid.

Action: Reenter the command with a correct i18ndata string.

0x1131f2fa dcp_s_rgy_era_invalid_protection

Severity: Varies **Component:** dcp

Text: Invalid protection level.

Explanation: The protection level specified as part of a binding is invalid.

Action: Reenter the command with a correct binding.

0x1131f2f4 dcp_s_rgy_era_no_attribute_exists

Severity: Varies **Component:** dcp

Text: The specified extended attribute does not exist.

Explanation: The command specified requires an extended attribute to exist.

Action: Reenter the command with an existing extended attribute.

0x1131f2df dcp_s_rgy_era_not_int

Severity: Varies **Component:** dcp

Text: Supplied value for extended attribute is not an integer.

Explanation: The value of this extended attribute must be an integer.

Action: Reenter the command with an integer for the extended attribute.

0x1131f2e8 dcp_s_rgy_era_not_multi_valued

Severity: Varies **Component:** dcp

Text: Cannot add another instance of this attribute due to lack of multi-value capability.

Explanation: Only one instance of this attribute type is allowed.

Action: Reenter the command with a modify option to change the value.

0x1131f2e2 dcp_s_rgy_era_not_present

Severity: Varies **Component:** dcp

Text: Supplied value for attribute of type void must be 'present'.

Explanation: The value of this extended attribute must be 'present'.

Action: Reenter the command with the proper value for the extended attribute.

0x1131f2e7 dcp_s_rgy_era_not_uuid

Severity: Varies **Component:** dcp

Text: Supplied value for extended attribute is not a valid UUID.

Explanation: The value of this extended attribute must be a valid UUID.

Action: Reenter the command with a valid UUID for the extended attribute.

0x1131f2e6 dcp_s_rgy_era_out_of_range

Severity: Varies **Component:** dcp

Text: Supplied value for extended attribute is not less than %d.

Explanation: The value of this extended attribute must be an integer less than the maximum value for a 32 bit integer.

Action: Reenter the command with an integer less than the maximum value for a 32 bit integer, for the extended attribute.

0x1131f2e4 dcp_s_rgy_era_too_many_voids

Severity: Varies **Component:** dcp

Text: Only one instance of the same 'void' attribute is allowed.

Explanation: The user is trying to add more than one attribute of encoding type void to the same object.

Action: Specify the same void attribute only once on the command line.

0x1131f2ea dcp_s_rgy_era_type_and_value

Severity: Varies **Component:** dcp

Text: An 'any' attribute requires both a value and an encoding type.

Explanation: An attribute of encoding type any requires both a value and an encoding type to be specified on the command line.

Action: Reenter the command with both a value and an encoding type.

0x1131f2f0 dcp_s_rgy_era_unknown_binding_type

Severity: Varies **Component:** dcp

Text: Binding type of extended attribute is unknown.

Explanation: The specified binding type of the extended attribute is unknown.

Action: Reenter the command with a known extended attribute binding type.

0x1131f2ef dcp_s_rgy_era_unknown_encoding_type

Severity: Varies **Component:** dcp

Text: Encoding type of extended attribute is unknown.

Explanation: The specified encoding type of the extended attribute is unknown.

Action: Reenter the command with a known extended attribute encoding type.

0x1131f2e3 dcp_s_rgy_era_void_already_exists

Severity: Varies **Component:** dcp

Text: An instance of the specified 'void' attribute already exists.

Explanation: The user is trying to add an attribute of encoding type void to an object, but the same attribute already exists.

Action: Remove the existing attribute of encoding type void then try again.

0x1131f2e9 dcp_s_rgy_era_wrong_num_values

Severity: Varies **Component:** dcp

Text: Incorrect number of values for attribute type.

Explanation: The number of values specified for this attribute is incorrect.

Action: Reenter the command with the proper number of values.

0x1131f2a0 dcp_s_rgy_full_or_simple

Severity: Varies **Component:** dcp

Text: Only full or simple names are allowed.

Explanation: The **principal**, **group**, **organization** and **account** commands accept only full or simple names. It is illegal to mix full and simple names in one command.

Action: Reenter the command and specify only full or simple names.

0x1131f2cd dcp_s_rgy_gid_is_wrong

Severity: Varies **Component:** dcp

Text: Supplied 'gid' must be a positive integer.

Explanation: The **gid** attribute is not a positive integer.

Action: Reenter the command providing the **gid** option with a value that is a positive integer.

0x1131f2ca dcp_s_rgy_gid_out_of_range

Severity: Varies **Component:** dcp

Text: Supplied 'gid' must be less than %d.

Explanation: The **gid** attribute is not a positive integer less than the maximum size of a 32 bit integer.

Action: Reenter the command providing the **gid** option with a value that is a positive integer less than the size of a 32 bit integer.

0x1131f2de dcp_s_rgy_illegal_attr

Severity: Varies **Component:** dcp

Text: Supplied attribute '%s' is illegal.

Explanation: The specified attribute is illegal.

Action: Reenter the command with a valid attribute.

0x1131f29f dcp_s_rgy_illegal_version

Severity: Varies **Component:** dcp

Text: The string '%s' is not a legal security software version.

Explanation: The user entered an illegal version string.

Action: Reenter the command with a legal version string.

0x1131f293 dcp_s_rgy_invalid_acl_mgr_name

Severity: Varies **Component:** dcp

Text: Invalid ACL manager name.

Explanation: The name specified for the ACL manager set is invalid.

Action: Reenter the command with a correct aclmgr name.

0x1131f292 dcp_s_rgy_invalid_acl_mgr_syntax

Severity: Varies **Component:** dcp

Text: Invalid ACL manager syntax.

Explanation: The aclmgr specified for the schema is invalid.

Action: Reenter the command with a correct aclmgr.

0x1131f29d dcp_s_rgy_invalid_attribute

Severity: Varies **Component:** dcp

Text: Invalid attribute. Attribute is illegal in this syntax.

Explanation: User entered incorrect command syntax. Attribute is not legal except on principal entry.

Action: Reenter the command with a correct attribute value. The following are valid attributes:

- uid
- gid
- orgid
- fullname
- quota
- alias
- uuid
- inprojlist
- acctlife
- pwdalpha
- pwdlife
- pwdminlen
- pwdspaces
- pwdalpha

Ensure the attribute selected for the object specified is valid.

0x1131f2c5 dcp_s_rgy_invalid_cell

Severity: Varies **Component:** dcp

Text: The cell name '%s' is invalid.

Explanation: The *catalog* process was unable to make any sense out of the specified cell name.

Action: Reissue the command with a valid cell name.

0x1131f295 dcp_s_rgy_invalid_intercell_action

Severity: Varies **Component:** dcp

Text: Invalid intercell action.

Explanation: The value specified for the intercell action is invalid.

Action: Reenter the command with a correct intercell action value.

0x1131f299 dcp_s_rgy_invalid_permset_char

Severity: Varies **Component:** dcp

Text: Invalid permission string.

Explanation: The value specified for the permission string is invalid.

Action: Reenter the command with a correct permission string.

0x1131f29c dcp_s_rgy_invalid_pnvalue

Severity: Varies **Component:** dcp

Text: Invalid attribute or policy value.

Explanation: A value other than *yes* or *no* was entered for an attribute or policy.

Action: The following objects have attributes or policies whose value is either *yes* or *no*:

- **principal**
- **group**
- **organization**
- **account**

- **registry**

Ensure that the attributes have a valid value and reenter the command.

0x1131f270 dcp_s_rgy_invalid_pwd_val_type

Severity: Varies **Component:** dcp

Text: The value of the 'pwd_val_type' ERA on the principal is invalid.

Explanation: The value of the pwd_val_type ERA on the principal is invalid. The recognized values are 0 (user must select password), 1 (user must select password), 2 (user may select password), 3 (user cannot select password. It must be randomly generated).

Action: Recreate/Modify the principal with the correct value for the pwd_val_type ERA.

0x1131f297 dcp_s_rgy_invalid_trigger_type

Severity: Varies **Component:** dcp

Text: Invalid trigger type.

Explanation: The value specified for the trigger type is invalid.

Action: Reenter the command with a correct trigger type.

0x1131f2c1 dcp_s_rgy_list_and_switches

Severity: Varies **Component:** dcp

Text: Only options or an attribute list are allowed.

Explanation: When modifying or creating an object it is only valid to enter an attribute list or a set of attribute options.

Action: Reenter the command specifying either an attribute list or a set of attribute options.

0x1131f28f dcp_s_rgy_missing_acl_mgr_set

Severity: Varies **Component:** dcp

Text: The ACL manager set is missing.

Explanation: No ACL manager set for the schema was specified.

Action: Reenter the command with a known ACL manager set.

0x1131f274 dcp_s_rgy_missing_encoding_type

Severity: Varies **Component:** dcp

Text: Encoding type is missing.

Explanation: No encoding type for the schema was specified.

Action: Reenter the command with a known encoding type.

0x1131f2bb dcp_s_rgy_no_acct_name

Severity: Varies **Component:** dcp

Text: No account name.

Explanation: The **account** object was missing an account name.

Action: The **account** object takes a list of account names as an argument. The names must be account names and not the names of database objects that contain registry information about the accounts. They should not begin with **./:/sec/account/**. Reenter the command with a valid account name.

0x1131f2f7 dcp_s_rgy_no_binding_to_parse

Severity: Varies **Component:** dcp

Text: No string binding given to acquire host name for.

Explanation: This command needs a string binding to parse.

Action: Reenter the command with a string binding to parse.

0x1131f275 dcp_s_rgy_no_fgroup

Severity: Varies **Component:** dcp

Text: Foreign group name not specified.

Explanation: The foreign group name is required for this command.

Action: Reissue the command with the foreign group name specified.

0x1131f2bf dcp_s_rgy_no_gid

Severity: Varies **Component:** dcp

Text: No 'gid' specified when attempting to create an alias.

Explanation: No **gid** was specified while attempting to create an alias. The creation of an alias requires a **gid** to associate the alias to an existing **group**.

Action: Reenter the command specifying a **gid** when creating an alias.

0x1131f2b9 dcp_s_rgy_no_group_name

Severity: Varies **Component:** dcp

Text: No group name.

Explanation: The **group** object was missing a group name.

Action: The **group** object takes a list of group names as an argument. The names must be group names and not the names of database objects that contain registry information about the groups. The should not begin with **./:/sec/group/**. Reenter the command with a valid group name.

0x1131f2c6 dcp_s_rgy_no_member_name

Severity: Varies **Component:** dcp

Text: No member name was specified.

Explanation: No member name was provided when attempting to add a member to a group or organization.

Action: Reenter the command with the **-member** option. The value of the option is a list of principal names to be added.

0x1131f26e dcp_s_rgy_no_modify_operation

Severity: Varies **Component:** dcp

Text: No modify operation has been specified.

Explanation: The user did not request a **modify** operation.

Action: Reissue the command and specify a **modify** operation.

0x1131f2f6 dcp_s_rgy_no_name_to_parse

Severity: Varies **Component:** dcp

Text: No name given to parse.

Explanation: This command needs a name to parse.

Action: Reenter the command with a name to parse.

0x1131f271 dcp_s_rgy_no_name_to_rename

Severity: Varies **Component:** dcp

Text: No name provided to rename to.

Explanation: A **-to** name was not provided as an argument to the rename command.

Action: The user should reissue the command with an appropriate command line option.

0x1131f2ba dcp_s_rgy_no_org_name

Severity: Varies **Component:** dcp

Text: No organization name.

Explanation: The **organization** object was missing an organization name.

Action: The **organization** object takes a list of organization names as an argument. The names must be organization names and not the names of database objects that contain registry information about the organizations. They should not begin with **./:/sec/organization/**. Reenter the command with a valid organization name.

0x1131f2b8 dcp_s_rgy_no_princ_name

Severity: Varies **Component:** dcp

Text: No principal name.

Explanation: The **principal** object was missing a principal name.

Action: The **principal** object takes a list of principal names as an argument. The names must be principal names and not the names of database objects that contain registry information about the principals. They should not begin with **./:/sec/principal/**. Reenter the command with a valid principal name.

0x1131f26f dcp_s_rgy_no_random_password

Severity: Varies **Component:** dcp

Text: Password may not be randomly generated.

Explanation: The **-randompwd** option cannot be used due to the value of the **pwd_val_type** ERA on the principal.

Action: Reissue the command, omitting the `randompwd` option. Instead use the `password` option and a replacement password.

0x1131f2bd dcp_s_rgy_no_schema_name

Severity: Varies **Component:** dcp

Text: No schema name.

Explanation: The **schema** object was missing a schema name.

Action: The **schema** object takes a list of schema names as an argument. The names must be fully-qualified schema names.

0x1131f2be dcp_s_rgy_no_uid

Severity: Varies **Component:** dcp

Text: No 'uid' specified when attempting to create an alias.

Explanation: No **uid** was specified while attempting to create an alias. The creation of an alias requires a **uid** to associate the alias to an existing **principal**.

Action: Reenter the command specifying a **uid** when creating an alias.

0x1131f29e dcp_s_rgy_no_versions_found

Severity: Varies **Component:** dcp

Text: The attempt to retrieve legal version information failed.

Explanation: The internal call to retrieve legal version information failed.

Action: Determine if the security server can actually report version information.

0x1131f2ce dcp_s_rgy_orgid_is_wrong

Severity: Varies **Component:** dcp

Text: Supplied 'orgid' must be a positive integer.

Explanation: The **orgid** attribute is not a positive integer.

Action: Reenter the command providing the **orgid** option with a value that is a positive integer.

0x1131f2cb dcp_s_rgy_orgid_out_of_range

Severity: Varies **Component:** dcp

Text: Supplied 'orgid' must be less than %d.

Explanation: The **orgid** attribute is not a positive integer less than the maximum size of a 32 bit integer.

Action: Reenter the command providing the **orgid** option with a value that is a positive integer less than the size of a 32 bit integer.

0x1131f30f dcp_s_rgy_pk_file_open_fail

Severity: Varies **Component:** dcp

Text: Could not open file '%s'.

Explanation: The system call to open the specified file on the local filesystem for reading failed.

Action: Check to see if the specified file exists and has the correct permissions for reading.

0x1131f310 dcp_s_rgy_pk_file_read_fail

Severity: Varies **Component:** dcp

Text: Could not read from file '%s'.

Explanation: The system call to read from the specified file on the local filesystem failed.

Action: Check to see if the specified file exists and is not empty.

0x1131f304 dcp_s_rgy_pk_gen_and_key

Severity: Varies **Component:** dcp

Text: Cannot specify a public or private keyfile when 'generatekey' is also specified.

Explanation: A keyfile may not be specified when also asking to have a key automatically generated.

Action: Reenter the command with the correct combination of attributes.

0x1131f305 dcp_s_rgy_pk_gen_and_pass

Severity: Varies **Component:** dcp

Text: Cannot specify a password when 'pkgenprivkey' is also specified.

Explanation: A password may not be specified when also asking to have a key automatically generated.

Action: Reenter the command with the correct combination of attributes.

0x1131f303 dcp_s_rgy_pk_genkey_is_negative

Severity: Varies **Component:** dcp

Text: Supplied value for '%s' must not be a negative integer.

Explanation: The value for the specified attribute is incorrect.

Action: Reenter the command with a legal value.

0x1131f301 dcp_s_rgy_pk_genkey_not_int

Severity: Varies **Component:** dcp

Text: Supplied value for '%s' must be zero, a positive integer or 'default'.

Explanation: The value for the specified attribute is not a legal, acceptable value.

Action: Reenter the command with a legal value.

0x1131f302 dcp_s_rgy_pk_genkey_out_of_range

Severity: Varies **Component:** dcp

Text: Supplied value for key generation attribute must be less than %d.

Explanation: The value for the specified attribute is too large.

Action: Reenter the command with a legal value.

0x1131f307 dcp_s_rgy_pk_illegal_oldpass

Severity: Varies **Component:** dcp

Text: Supplied attribute 'oldpassphrase' is illegal during a create operation.

Explanation: An old passphrase may not be specified when a new account is created.

Action: Reenter the command with a valid combination of attributes.

0x1131f30b dcp_s_rgy_pk_inconsistent_passphrase

Severity: Varies **Component:** dcp

Text: Passphrases for all the public keys must be the same.

Explanation: The passphrase on both the keys should be the same, otherwise login won't work.

Action: Change both passphrases to be the same.

0x1131f2fe dcp_s_rgy_pk_invalid_storage

Severity: Varies **Component:** dcp

Text: The value for 'pkmechanism' must be either 'file' or 'pkss'.

Explanation: The specified value does not match any legal values.

Action: Reenter the command with the correct value.

0x1131f30c dcp_s_rgy_pk_missing_argument

Severity: Varies **Component:** dcp

Text: No action specified by the public key attribute list.

Explanation: There is no valid action specified in the given attribute list.

Action: Reenter the command with a valid combination of attributes.

0x1131f30a dcp_s_rgy_pk_missing_eitherpass

Severity: Varies **Component:** dcp

Text: Attribute 'oldpassphrase' and/or 'newpassphrase' not entered.

Explanation: One or both passphrases must be specified when also asking to have a key automatically generated.

Action: Reenter the command with a valid combination of attributes.

0x1131f306 dcp_s_rgy_pk_missing_key

Severity: Varies **Component:** dcp

Text: Must specify both 'publickeyfile' and 'privatekeyfile'.

Explanation: When specifying a key file, both public and private key files must be specified together.

Action: Reenter the command with a valid combination of attributes.

0x1131f309 dcp_s_rgy_pk_missing_newpass

Severity: Varies **Component:** dcp

Text: Required attribute 'newpassphrase' not entered correctly.

Explanation: A passphrase must be specified when also asking to have a key automatically generated or when the system administrator is generating new keys using key files.

Action: Reenter the command with a valid combination of attributes.

0x1131f308 dcp_s_rgy_pk_missing_oldpass

Severity: Varies **Component:** dcp

Text: Required attribute 'oldpassphrase' not entered correctly.

Explanation: Both passphrases must be specified when also asking to not have a key automatically generated, and no keyfiles are specified.

Action: Reenter the command with a valid combination of attributes.

0x1131f30d dcp_s_rgy_pk_same_filename

Severity: Varies **Component:** dcp

Text: The same file cannot be used for public and private keys.

Explanation: Two different files are required when using public and private keys.

Action: Reenter the command with valid filenames.

0x1131f30e dcp_s_rgy_pk_same_pk_string

Severity: Varies **Component:** dcp

Text: The same file contents cannot be used for public and private keys.

Explanation: Two different values are required when using public and private keys.

Action: Reenter the command with valid file contents.

0x1131f300 dcp_s_rgy_pk_too_many_attr

Severity: Varies **Component:** dcp

Text: Supplied attribute '%s' was specified more than once.

Explanation: The specified attribute was specified twice on the command line.

Action: Reenter the command with the attribute specified only once.

0x1131f2ff dcp_s_rgy_pk_unknown_attr

Severity: Varies **Component:** dcp

Text: Supplied attribute '%s' is unknown.

Explanation: The specified public key attribute is unknown.

Action: Reenter the command with a valid attribute.

0x1131f2d6 dcp_s_rgy_pwdlife_is_bad

Severity: Varies **Component:** dcp

Text: Supplied 'pwdlife' is a bad date value.

Explanation: The supplied value of **pwdlife** is bad. The attribute value should be a relative UTC date or the value **unlimited**.

Action: Reenter the command with a UTC date as the value.

0x1131f2d5 dcp_s_rgy_pwdminlen_is_negative

Severity: Varies **Component:** dcp

Text: Supplied 'pwdminlen' must be a positive integer.

Explanation: The supplied value of **pwdlen** is negative. The value should be a positive number.

Action: Reenter the command with a positive integer as the value.

0x1131f2d3 dcp_s_rgy_pwdminlen_not_int

Severity: Varies **Component:** dcp

Text: Supplied 'pwdminlen' is not a positive integer.

Explanation: The **pwdminlen** attribute must be a positive integer.

Action: Reenter the command providing a positive integer for the **pwdminlen** attribute.

0x1131f2d4 dcp_s_rgy_pwdminlen_out_of_range

Severity: Varies **Component:** dcp

Text: Supplied 'pwdminlen' must be less than %d.

Explanation: The **pwdminlen** attribute must be a positive integer.

Action: Reenter the command providing a positive integer for the **pwdminlen** attribute.

0x1131f2d1 dcp_s_rgy_quota_is_negative

Severity: Varies **Component:** dcp

Text: Supplied 'quota' must be a positive integer.

Explanation: The **quota** attribute is not a positive integer or a the string value **unlimited**.

Action: Reenter the command providing the **quota** option with a value that is a positive integer or the string value **unlimited**.

0x1131f2cf dcp_s_rgy_quota_not_int

Severity: Varies **Component:** dcp

Text: Supplied 'quota' is not a positive integer or 'unlimited'.

Explanation: The **quota** attribute is not a positive integer or a the string value **unlimited**.

Action: Reenter the command providing the **quota** option with a value that is a positive integer or the string value **unlimited**.

0x1131f2d0 dcp_s_rgy_quota_out_of_range

Severity: Varies **Component:** dcp

Text: Supplied 'quota' must be less than %d.

Explanation: The **quota** attribute is not a positive integer, the string value **unlimited** or less than the maximum size of a 32 bit integer.

Action: Reenter the command providing the **quota** option with a value that is a positive integer, the string value **unlimited** or less than the maximum size of a 32 bit integer.

0x1131f2a5 dcp_s_rgy_sa_already_master

Severity: Varies **Component:** dcp

Text: Registry replica specified is the master.

Explanation: The command did not contain the name of a registry slave replica to operate on.

Action: Reenter the command with a registry slave replica.

0x1131f2a6 dcp_s_rgy_sa_force_set_master

Severity: Varies **Component:** dcp

Text: The -force option is valid only with the -master option.

Explanation: The command did not contain the **-master** option.

Action: Reenter the command with both -force and -master options.

0x1131f2a2 dcp_s_rgy_sa_no_replica

Severity: Varies **Component:** dcp

Text: Registry replica not specified.

Explanation: The command did not contain the name of a registry replica to operate on.

Action: Reenter the command with a registry replica.

0x1131f2a3 dcp_s_rgy_sa_only_one_replica

Severity: Varies **Component:** dcp

Text: Only one registry replica is allowed.

Explanation: The command contained more than one registry replica to operate on.

Action: Reenter the command with one registry replica.

0x1131f2a4 dcp_s_rgy_sa_replica_not_master

Severity: Varies **Component:** dcp

Text: Registry replica specified is not the master.

Explanation: The command did not contain a master replica to operate on.

Action: Use registry show to obtain the name of a master replica.

0x1131f2a7 dcp_s_rgy_sa_seqno_high

Severity: Varies **Component:** dcp

Text: Replica '%s' contains more up-to-date information.

Explanation: The last update sequence number of the specified replica is lower than the other replicas in the cell.

Action: Specify the named replica to be the master. Or take care and reenter the command with both -force and -master options.

0x1131f272 dcp_s_rgy_schema_rename_no_newname

Severity: Varies **Component:** dcp

Text: No new name specified.

Explanation: The user did not specify the new schema name.

Action: Specify the new name for the schema entry using the '-to' option.

0x1131f273 dcp_s_rgy_sch_entry_not_found

Severity: Varies **Component:** dcp

Text: Schema entry '%s' not found.

Explanation: The specified name is not a legal schema entry.

Action: Specify a legal schema entry.

0x1131f2fd dcp_s_rgy_server_unavailable

Severity: Varies **Component:** dcp

Text: Registry server '%s' is unavailable.

Explanation: The registry server that the user requested to contact is not available at this time.

Action: Reissue the command with a currently valid registry server name.

0x1131f2cc dcp_s_rgy_uid_is_wrong

Severity: Varies **Component:** dcp

Text: Supplied 'uid' must be a positive integer.

Explanation: The **uid** attribute is not a positive integer.

Action: Reenter the command providing the **uid** option with a value that is a positive integer.

0x1131f2c9 dcp_s_rgy_uid_out_of_range

Severity: Varies **Component:** dcp

Text: Supplied 'uid' must be less than %d.

Explanation: The **uid** attribute is not a positive integer less than the maximum size of a 32 bit integer.

Action: Reenter the command providing the **uid** option with a value that is a positive integer less than the size of a 32 bit integer.

0x1131f290 dcp_s_rgy_unknown_encoding_type

Severity: Varies **Component:** dcp

Text: Encoding type is unknown.

Explanation: The specified encoding type for the schema is unknown.

Action: Reenter the command with a known encoding type.

0x1131f2c0 dcp_s_rgy_uuid_and_alias

Severity: Varies **Component:** dcp

Text: A 'uuid' cannot be specified when attempting to create an alias.

Explanation: A **uuid** is only valid when adopting an orphaned **principal** object.

Action: Reenter command specifying only a **uuid** to adopt an orphan **principal** object or the alias options to generate an alias to an existing object.

0x1131f29b dcp_s_rgy_verbose_missing_replica

Severity: Varies **Component:** dcp

Text: The '-replica' option is required to use the '-verbose' option.

Explanation: Trying to use the verbose option without the replica option.

Action: Reenter the command with the correct options.

0x1131f08a dcp_s_rpc_bad_endpoint_binding

Severity: Varies **Component:** dcp

Text: The value '%s' is not a valid endpoint map binding.

Explanation: The endpoint map binding value specified is invalid.

Action: Retype the command with a legal endpoint map binding specified.

0x1131f08c dcp_s_rpc_bad_max_value

Severity: Varies **Component:** dcp

Text: The value specified for the '-max' option is illegal.

Explanation: The specified max value was outside the valid range.

Action: Retype the command using a max value greater than 0.

0x1131f08b dcp_s_rpc_bad_priority

Severity: Varies **Component:** dcp

Text: Priority out of valid range of 0 to 7.

Explanation: The given priority was outside the valid range.

Action: Retype the command using a priority value from 0 to 7.

0x1131f085 dcp_s_rpc_bad_version_opt

Severity: Varies **Component:** dcp

Text: The value '%s' is not a valid version identifier.

Explanation: An invalid string was entered as the -version option.

Action: Reenter command with a legal value for -version, one of: **all**, **compatible**, **exact**, **majoronly**, or **upto**.

0x1131f08f dcp_s_rpc_default_with_others

Severity: Varies **Component:** dcp

Text: The '-default' option cannot be combined with other options.

Explanation: If you use the **-default** option to specify that an operation is to be invoked on the default profile member, then you cannot use other options to identify a profile member. See the documentation on the **rpcprofile** object for the correct options.

Action: Retype the command with proper options.

0x1131f084 dcp_s_rpc_interface_no_version

Severity: Varies **Component:** dcp

Text: The interface specification does not contain a valid version identifier.

Explanation: An interface specification was entered without a version identifier.

Action: Reenter command with a legal value for -interface, either as: {UUID major.minor} or UUID,major.minor.

0x1131f092 dcp_s_rpc_member_or_annot

Severity: Varies **Component:** dcp

Text: The '-member' can only be used with the '-interface' option.

Explanation: The **-member** option must be used with the **-interface** option, and cannot be used with the **-default**, **-priority**, or **-annotation** options.

Action: Retype the command with proper options. See the documentation on the **rpcprofile remove** command for the correct options.

0x1131f08d dcp_s_rpc_no_binding

Severity: Varies **Component:** dcp

Text: No string binding entered.

Explanation: If an interface id is entered, then a string binding must be entered to be exported for that interface.

Action: Retype the command with a string binding using the **-binding** option.

0x1131f086 dcp_s_rpc_no_binding_found

Severity: Varies **Component:** dcp

Text: No matching binding information found.

Explanation: No binding information could be found. Either none was found in the RPC entry, RPC group, or RPC profile, or none was found which matched criteria specified by options.

Action: Either the name given was incorrect, or the options given were incorrect, or the object does not contain any matching binding information. If either of the first two is the case, retype the command correcting any incorrect values.

0x1131f080 dcp_s_rpc_no_entry_name

Severity: Varies **Component:** dcp

Text: No RPC entry name given.

Explanation: No RPC entry name was given to the command.

Action: Retype the command with an RPC entry name.

0x1131f081 dcp_s_rpc_no_group_name

Severity: Varies **Component:** dcp

Text: No RPC group name given.

Explanation: No RPC group name was given to the command.

Action: Retype the command with an RPC group name.

0x1131f087 dcp_s_rpc_no_interface_id

Severity: Varies **Component:** dcp

Text: Interface id not entered.

Explanation: An interface id must be entered with the **-interface** option.

Action: Retype the command with the **-interface** option and an interface id.

0x1131f088 dcp_s_rpc_no_interface_id_def

Severity: Varies **Component:** dcp

Text: Must use '-interface' or '-default'.

Explanation: An interface id must be entered if the default profile member is not used.

Action: Retype the command with an interface id specified with the **-interface** option, or use the default profile member by specifying the **-default**.

0x1131f083 dcp_s_rpc_no_member_name

Severity: Varies **Component:** dcp

Text: No member name given.

Explanation: No -member option was given to the command.

Action: Retype the command using the -member option with a member name.

0x1131f08e dcp_s_rpc_no_objects

Severity: Varies **Component:** dcp

Text: Must use either an object UUID or an interface id.

Explanation: The export command exports either binding information associated with an interface or a list of object UUIDs to an RPC object. Neither was given.

Action: Retype the command with proper arguments. See the documentation of the **export** commands for details.

0x1131f082 dcp_s_rpc_no_profile_name

Severity: Varies **Component:** dcp

Text: No RPC profile name given.

Explanation: No RPC profile name was given to the command.

Action: Retype the command with an RPC profile name.

0x1131f090 dcp_s_rpc_priority_with_others

Severity: Varies **Component:** dcp

Text: The '-priority' option cannot be combined with other options.

Explanation: The **-priority** option cannot be combined with other options for the **rpcprofile remove** command.

Action: Retype the command with proper options.

0x1131f091 dcp_s_rpc_uuid_with_others

Severity: Varies **Component:** dcp

Text: The '-uuid' option cannot be combined with other options.

Explanation: The **-uuid** option cannot be combined with other options for the **endpoint show** command.

Action: Retype the command with proper options.

0x1131f089 dcp_s_rpc_version_no_interface

Severity: Varies **Component:** dcp

Text: The '-version' option requires the '-interface' option.

Explanation: The version option can only be specified if the -interface option is specified.

Action: Retype the command with both a **-version** and an **-interface** option.

0x1131f378 dcp_s_sbind_entry_option

Severity: Varies **Component:** dcp

Text: Entry option used with a string binding.

Explanation: The ACL object was specified as a string binding, but the **-entry** option was also used.

Action: Reenter the command without the entry option.

0x1131f050 dcp_s_shell_fork_fail

Severity: Varies **Component:** dcp

Text: Could not fork shell process.

Explanation: The **shell** command could not start a new shell.

Action: Fix the system resource that was not available.

0x1131f02f dcp_s_signal_bug

Severity: Varies **Component:** dcp

Text: TclSignalTrap bug occurred.

Explanation: Setting the signal action failed.

Action: Make sure that Tcl is built correctly for your system.

0x1131f037 dcp_s_signal_invalid_action

Severity: Varies **Component:** dcp

Text: Invalid action '%s', should be one of: default, ignore, error, trap, get, block, or unblock.

Explanation: The signal command was not given a valid action.

Action: Retype the command with a valid signal action.

0x1131f034 dcp_s_signal_invalid_name

Severity: Varies **Component:** dcp

Text: Invalid signal name: %s.

Explanation: The supplied signal name is invalid.

Action: Supply a valid signal name.

0x1131f033 dcp_s_signal_invalid_num

Severity: Varies **Component:** dcp

Text: Invalid signal number: %s.

Explanation: The supplied signal number is invalid.

Action: Supply a valid signal number.

0x1131f032 dcp_s_signal_list_not_empty

Severity: Varies **Component:** dcp

Text: The signal list may not be empty.

Explanation: The signal list may not be empty.

Action:

0x1131f039 dcp_s_signal_lost_interp

Severity: Varies **Component:** dcp

Text: Signal interpreter lost.

Explanation: The interpreter no longer exists.

Action: The signal interpreter no longer exists.

0x1131f035 dcp_s_signal_posix_unavailable

Severity: Varies **Component:** dcp

Text: POSIX signals are unavailable on this system.

Explanation: This system does not support POSIX signals.

Action: Use only BSD signals.

0x1131f038 dcp_s_signal_takes_no_cmd

Severity: Varies **Component:** dcp

Text: A command may not be specified for the '%s' action.

Explanation: The specified action does not take a command.

Action: Retype the command with the correct arguments.

0x1131f036 dcp_s_signal_trap_req_cmd

Severity: Varies **Component:** dcp

Text: A command is required for trapping signals.

Explanation: The signal trap command was not given a command to execute.

Action: Retype the command with a command to execute.

0x1131f3e4 dcp_s_sr_bad_if_attr

Severity: Varies **Component:** dcp

Text: The interface list must contain pairs of entries {uuid_string major_version.minor_version}.

Explanation: User entered incorrect interface syntax.

Action: Reenter command with correct interface attribute.

0x1131f3df dcp_sr_missing_req_opt

Severity: Varies **Component:** dcp

Text: Required option '%s' not entered.

Explanation: Required option to the command were not entered.

Action: Retype the command with correct arguments and options.

0x1131f3e0 dcp_sr_obj_not_found

Severity: Varies **Component:** dcp

Text: The object '%s' does not exist.

Explanation: A matching object could not be found. This may only be informational, depending on whether or not a match was expected.

Action: Retype the command with possibly correct object name.

0x1131f3e1 dcp_sr_unknown_serv_flag

Severity: Varies **Component:** dcp

Text: Undefined service flag has been encountered.

Explanation: There is only one service flag defined (disabled).

Action: Enter right service flag.

0x1131f3e5 dcp_sr_uuid_mul_used

Severity: Varies **Component:** dcp

Text: The UUID is being used more than once.

Explanation: The UUID can only be used for one server instance.

Action: Reenter command with one server a time.

0x1131f3e2 dcp_sr_wrong_stop_mthd

Severity: Varies **Component:** dcp

Text: Undefined stop method flag has been encountered.

Explanation: There are only four stop method flags available, rpc, soft, hard, and error.

Action: Reenter command with right stop method.

0x1131f3e3 dcp_s_sr_wrong_timeout_code

Severity: Varies **Component:** dcp

Text: Undefined timeout code flag has been encountered.

Explanation: There are only three timeout code flags available, min, max, and default.

Action: Reenter command with right timeout code.

0x1131f01c dcp_s_too_few_list_elements

Severity: Varies **Component:** dcp

Text: The list contains too few elements.

Explanation: The command expected more elements than provided.

Action: Retype the command with correct list structure.

0x1131f009 dcp_s_too_many_args

Severity: Varies **Component:** dcp

Text: Too many arguments specified in command.

Explanation: The command received too many arguments.

Action: Retype the command with correct number of arguments.

0x1131f01d dcp_s_too_many_list_elements

Severity: Varies **Component:** dcp

Text: The list contains too many elements.

Explanation: The command expected less elements than provided.

Action: Retype the command with correct list structure.

0x1131f031 dcp_s_too_many_signals

Severity: Varies **Component:** dcp

Text: Too many signals supplied in list.

Explanation: The supplied list contained too many signals.

Action: Supply a smaller number of signals.

0x1131f37e dcp_s_too_many_types

Severity: Varies **Component:** dcp

Text: Too many ACL types.

Explanation: More than one ACL type option was given.

Action: Reenter the command with only one ACL type option. Valid ACL types are the ACL object itself, **-ic**, **-io**, or **-entry**.

0x1131f2a9 dcp_s_uid_not_allowed

Severity: Varies **Component:** dcp

Text: Unrecognized attribute 'uid'.

Explanation: The user supplied bad attribute name. The **principal** object takes only the **uid** as a valid user identification specifier.

Action: Reenter the command and use the correct user identification specifier.

0x1131f432 dcp_s_utc_add_failed

Severity: Varies **Component:** dcp

Text: Could not add the two timestamps.

Explanation: The call to add the two timestamps failed. One or both of the timestamps is invalid.

Action: Retype the command with a valid combination of timestamps.

0x1131f431 dcp_s_utc_add_two_abs

Severity: Varies **Component:** dcp

Text: Adding two absolute timestamps is not allowed.

Explanation: The supplied arguments were both absolute timestamps. Adding two absolute timestamps yields undefined results.

Action: Retype the command with a valid combination of timestamps.

0x1131f438 dcp_s_utc_bad_mult

Severity: Varies **Component:** dcp

Text: The value '%s' is not a valid integer or floating point number.

Explanation: The conversion from the string the user typed to an integer or floating point number failed, or was not able to convert the entire string.

Action: Retype the command with a valid integer or floating point number.

0x1131f430 dcp_s_utc_bad_rel_time

Severity: Varies **Component:** dcp

Text: The value '%s' is not a valid relative timestamp.

Explanation: The supplied argument was not able to be converted to a relative timestamp.

Action: Retype the command with a valid relative timestamp.

0x1131f42f dcp_s_utc_bad_time

Severity: Varies **Component:** dcp

Text: The value '%s' is not a valid absolute or relative timestamp.

Explanation: The supplied argument was not able to be converted to a relative or absolute timestamp.

Action: Retype the command with a valid relative or absolute timestamp.

0x1131f434 dcp_s_utc_compare_diff_ts

Severity: Varies **Component:** dcp

Text: Comparison of a relative and an absolute timestamp is not allowed.

Explanation: The user entered two timestamps for comparison, one relative and one absolute. Comparing dissimilar timestamps yields indeterminate results.

Action: Retype the command with a valid combination of timestamps.

0x1131f435 dcp_s_utc_compare_failed

Severity: Varies **Component:** dcp

Text: Comparison of the two timestamps failed. Invalid timestamp.

Explanation: The call to compare the two timestamps failed. One or both of the timestamps is invalid.

Action: Retype the command with a valid combination of timestamps.

0x1131f436 dcp_s_utc_convert_failed

Severity: Varies **Component:** dcp

Text: Timestamp conversion failed. Invalid timestamp.

Explanation: The call to convert the timestamp failed. The timestamp is invalid.

Action: Retype the command with a valid timestamp.

0x1131f433 dcp_s_utc_conv_fail

Severity: Varies **Component:** dcp

Text: Could not convert the result back to a string.

Explanation: The call to convert the result back into a string failed. This may indicate an internal problem.

Action: Retype the command with a valid combination of timestamps.

0x1131f437 dcp_s_utc_multiply_failed

Severity: Varies **Component:** dcp

Text: Timestamp multiplication failed. Invalid timestamp or multiplier.

Explanation: The call to multiply the timestamp failed. The timestamp or multiplication factor is invalid.

Action: Retype the command with a valid timestamp.

0x1131f439 dcp_s_utc_sub_abs_from_rel

Severity: Varies **Component:** dcp

Text: Subtracting an absolute timestamp from a relative timestamp is not allowed.

Explanation: The supplied arguments were a relative timestamp and an absolute timestamp, in that order. Subtracting an absolute timestamp from a relative timestamp yields undefined results.

Action: Retype the command with a valid combination of timestamps.

0x1131f43a dcp_s_utc_sub_failed

Severity: Varies **Component:** dcp

Text: Could not subtract the two timestamps.

Explanation: The call to subtract the two timestamps failed. One or both of the timestamps is invalid.

Action: Retype the command with a valid combination of timestamps.

0x1131f006 dcp_s_var_set_readonly

Severity: Varies **Component:** dcp

Text: dcecp convenience variable is read-only.

Explanation: An attempt was made to set the value of a convenience variable that is read-only.

Action: You cannot set read-only convenience variables.

0x1131f005 dcp_s_var_unset_readonly

Severity: Varies **Component:** dcp

Text: Error: Cannot unset '%s': dcecp convenience variable is read-only.

Explanation: An attempt was made to unset the value of a convenience variable that is read-only.

Action: You cannot unset read-only convenience variables.

0x1131f007 dcp_s_wrong_num_args

Severity: Varies **Component:** dcp

Text: Wrong number of arguments, exactly %d arguments are required.

Explanation: A command expecting a specified number of arguments received some other amount.

Action: Retype the command with the indicated number of arguments.

0x1708308c deif_err_entry_not_found

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - specified entry not found

Explanation: ?

Action: None required

0x1708308a deif_err_file_open

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - unable to open file

Explanation: ?

Action: None required

0x1708308b deif_err_file_read

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - error while reading from file

Explanation: ?

Action: None required

0x1708308d deif_err_invalid_entry

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - invalid entry specification

Explanation: ?

Action: None required

0x17083092 deif_err_invalid_entry_key

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - invalid or unknown entry key

Explanation: ?

Action: None required

0x17083091 deif_err_invalid_entry_op

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - invalid operation on this entry type

Explanation: ?

Action: None required

0x1708308e deif_err_invalid_entry_type

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - invalid entry type

Explanation: ?

Action: None required

0x17083090 deif_err_invalid_key

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - invalid key

Explanation: ?

Action: None required

0x1708308f deif_err_invalid_perm

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - invalid permission string

Explanation: ?

Action: None required

0x17083093 deif_err_rgy_not_found

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT - unable to communicate with registry server

Explanation: ?

Action: None required

———— DS_E_ADMIN_LIMIT_EXCEEDED

Severity: Error **Component:** Directory Services

Text: Operation cannot be performed within the administrative constraints.

Explanation: This is an instance of an OM class **DS_C_SERVICE_ERROR**. The operation could not be performed within the constraints on the directory, and no partial results are available.

Action: Simplify the operation, if possible, and retry.

——— **DS_E_AFFECTS_MULTIPLE_DSAS**

Severity: Error **Component:** Directory Services

Text: Modification affects several DSAs and is prohibited.

Explanation: This is an instance of an OM class **DS_C_UPDATE_ERROR**. The attempted modification affects several Directory Service Agents (DSAs), and such a modification is prohibited.

Action: Without local agreement, you cannot perform a modification that will affect multiple DSAs. Local agreement between DSAs can allow modifications that affect multiple DSAs; for example, adding entries whose immediate superior entry is in a different DSA. This problem is not reported in such cases.

——— **DS_E_ALIAS_DEREFERENCING_PROBLEM**

Severity: Error **Component:** Directory Services

Text: An alias is encountered where an alias is not permitted.

Explanation: This is an instance of an OM class **DS_C_NAME_ERROR**. An alias was encountered where an alias is not permitted.

Action: Check that you have not created an alias for an alias. Only object entries can have aliases; thus, an alias of an alias is not permitted.

——— **DS_E_ALIAS_PROBLEM**

Severity: Error **Component:** Directory Services

Text: An alias is dereferenced that names an object that does not exist.

Explanation: This is an instance of an OM class **DS_C_NAME_ERROR**. An alias is dereferenced that names an object that does not exist; that is, for which no Directory entry can be found.

Action: Make sure your aliases always refer to existing objects.

——— **DS_E_ATTRIBUTE_OR_VALUE_EXISTS**

Severity: Error **Component:** Directory Services

Text: An attempt is made to add an attribute or value that already exists.

Explanation: This is an instance of an OM class **DS_C_ATTRIBUTE_ERROR**. An attempt was made to add an attribute or value that is already present in the Directory entry in question.

Action: The OM class **DS_C_ATTRIBUTE_PROBLEM** attribute **DS_ATTRIBUTE_TYPE** identifies the type of attribute with which the problem is associated. The **DS_ATTRIBUTE_VALUE**, if present, specifies the attribute value with which the problem is associated. The modification of attributes is an atomic operation. If you receive this error, then none of the requested changes have been made. Correct the problem and retry the operation.

——— **DS_E_BAD_ARGUMENT**

Severity: Error **Component:** Directory Services

Text: A bad argument was supplied.

Explanation: This is an instance of an OM class **DS_C_LIBRARY_ERROR**. A bad argument (other than name) was supplied. Use of an instance of OM class **DS_C_ATTRIBUTE**, for example, with no values for the OM attribute **DS_ATTRIBUTE_VALUES** as an input argument to a Directory Service function results in this error. This is because Directory attributes must always have at least one value.

Action: Refer to the documentation for guidance on valid arguments for each OM class.

——— **DS_E_BAD_CLASS**

Severity: Error **Component:** Directory Services

Text: The OM class of an argument is not supported for this operation.

Explanation: This is an instance of an OM class **DS_C_LIBRARY_ERROR**. An attempt was made to include an argument of an OM class that is not supported for the desired operation.

Action: Refer to the documentation to determine which arguments are supported for each OM class.

———— **DS_E_BAD_CONTEXT**

Severity: Error **Component:** Directory Services

Text: An invalid context argument was supplied.

Explanation: This is an instance of an OM class **DS_C_LIBRARY_ERROR**. An invalid *context* argument was supplied.

Action: Check to make sure that the *context* argument is a private object or the **DS_DEFAULT_CONTEXT** constant. Ensure that the selected service controls are appropriate for the attempted operation, especially if trying to access the directory user agent cache. Further information on the **DS_C_CONTEXT** object can be found in the *Application Development Guide* in the section on "XDS Class Definitions." To ensure that a desired *context* argument is acceptable for an operation, see that man page for that operation.

———— **DS_E_BAD_NAME**

Severity: Error **Component:** Directory Services

Text: An invalid name argument was supplied.

Explanation: This is an instance of an OM class **DS_C_LIBRARY_ERROR**. An invalid name argument was supplied.

Action: Ensure that the value for the *name* argument is a valid instance of the OM class **DS_C_NAME**.

———— **DS_E_BAD_SESSION**

Severity: Error **Component:** Directory Services

Text: An invalid session argument was supplied.

Explanation: This is an instance of an OM class **DS_C_LIBRARY_ERROR**. An invalid session argument was supplied.

Action: Ensure that the value of the *session* argument is an instance of the OM class **DS_C_SESSION**. The object must be private except for the **ds_bind()** function which allows either a private or public object. The function **ds_bind()** also allows the **DS_DEFAULT_SESSION** constant for the *session* partameter. Ensure that the appropriate *session* attributes are present, especially if requesting an authenticated bind.

——— **DS_E_BAD_WORKSPACE**

Severity: Error **Component:** Directory Services

Text: An invalid workspace argument was supplied.

Explanation: This is an instance of an OM class **DS_C_LIBRARY_ERROR**. A workspace was specified in the **ds_bind()** or **ds_version()** function that does not exist.

Action: To obtain a valid workspace, use **ds_initialize()**. Successful initialization returns **OM_workspace** containing a handle to a workspace in which OM objects can be created and manipulated. This value can then be used as the *workspace* argument for the **ds_bind()** or **ds_version()** function.

——— **DS_E_BUSY**

Severity: Error **Component:** Directory Services

Text: The Directory Service is temporarily too busy to perform the operation.

Explanation: This is an instance of an OM class **DS_C_SERVICE_ERROR**. Some part of the Directory Service is temporarily too busy to perform the operation, but will be available after a short while. This error is also returned if **ds_unbind()** is called while there are outstanding operations for that session, or if **ds_shutdown()** is called while there are open sessions.

Action: Wait a few minutes and retry the operation. Ensure that all outstanding operations on a given session have completed before calling **ds_unbind()**. Ensure that all sessions are unbound before calling **ds_shutdown()**.

——— **DS_E_CANNOT_ABANDON**

Severity: Error **Component:** Directory Services

Text: An attempt to abandon an operation has failed.

Explanation: This is an instance of an OM class **DS_C_ABANDON_FAILED** error. An attempt was made to abandon an operation for which this is prohibited, or the abandon could not be performed. The **ds_abandon()** function is not supported by DCE XDS, thus this error is returned.

Action: None required

——— **DS_E_CHAINING_REQUIRED**

Severity: Error **Component:** Directory Services

Text: Chaining is required to perform the operation, but is prohibited by the **DS_CHAINING_PROHIBITED** service control.

Explanation: This is an instance of an OM class **DS_C_SERVICE_ERROR**. An attempt was made to perform an operation that requires chaining; however, the *context* argument contains the service control **DS_CHAINING_PROHIBITED**.

Action: Either change the service control attribute of the *context* argument for the Directory to be used by the operation, or accept that the operation fails, or retry at another Directory Service Agent.

——— **DS_E_COMMUNICATIONS_PROBLEM**

Severity: Error **Component:** Directory Services

Text: A communication error has occurred.

Explanation: This is an instance of an OM class **DS_C_COMMUNICATIONS_ERROR**. An error occurred in the OSI services supporting the Directory Service.

Action: Contact the system administrator to correct the problem in the OSI communication stack. Retry the operation. A new bind to the Directory may be required.

——— **DS_E_CONSTRAINT_VIOLATION**

Severity: Error **Component:** Directory Services

Text: The attribute or attribute value does not conform to the imposed constraints.

Explanation: This is an instance of an OM class **DS_C_ATTRIBUTE_PROBLEM**. The attribute or attribute value does not conform to the constraints imposed by the standards (see The Directory: Models, ISO 9594-2 CCITT X.501) or by the attribute definition; for example, the value exceeds its upper bound.

Action: Correct the attribute or attribute value so that it conforms to standards.

——— **DS_E_DIT_ERROR**

Severity: Error **Component:** Directory Services

Text: An inconsistency is detected in the DIT.

Explanation: This is an instance of an OM class **DS_C_SERVICE_ERROR**. An inconsistency is detected in the Directory Information Tree (DIT) that can be localized to a particular entry or set of entries.

Action: Make sure that the entry or entries conform to the schema for the DIT.

———— **DS_E_ENTRY_EXISTS**

Severity: Error **Component:** Directory Services

Text: The name passed to the add entry operation already exists.

Explanation: This is an instance of an OM class **DS_C_UPDATE_ERROR**. The name passed to **ds_add_entry()** already exists.

Action: Correct the name and retry the operation or accept that the entry already exists.

———— **DS_E_INAPPROP_AUTHENTICATION**

Severity: Error **Component:** Directory Services

Text: The level of security attached to the requestor's credential is inconsistent.

Explanation: This is an instance of an OM class **DS_C_SECURITY_ERROR**. The level of security attached to the requestor's credentials is inconsistent with the level of protection required; for example, simple credentials are supplied whereas strong credentials are required.

Action: Change your credentials or abandon the operation.

———— **DS_E_INAPPROP_MATCHING**

Severity: Error **Component:** Directory Services

Text: An attempt was made to use an undefined matching rule for the attribute type.

Explanation: This is an instance of an OM class **DS_C_ATTRIBUTE_PROBLEM**. An attempt was made to use a matching rule that is not defined for the attribute type.

Action: Be sure you follow the matching rules defined by the CCITT standards to determine whether two values are equal for ordering or if one value is a substring of another. In addition, some attributes have specific matching rules that apply only to that attribute. For example, for **DS_A_PHONE_NBR**, the differences caused by the presence of spaces and dashes are considered insignificant.

——— **DS_E_INSUFFICIENT_ACCESS_RIGHTS**

Severity: Error **Component:** Directory Services

Text: The requestor does not have permission to perform the operation.

Explanation: This is an instance of an OM class **DS_C_SECURITY_ERROR**. The requestor does not have permission to perform the requested operation. A **ds_read()** operation only returns this error when access rights preclude the reading of all requested attribute values.

Action: The operation cannot be performed unless you obtain the necessary access rights.

——— **DS_E_INVALID_ATTRIBUTE_SYNTAX**

Severity: Error **Component:** Directory Services

Text: The attribute value does not conform to the attribute syntax of the attribute type.

Explanation: This is an instance of an OM class **DS_C_ATTRIBUTE_PROBLEM**. A value presented as an argument does not conform to the attribute syntax for the attribute type.

Action: Correct the attribute syntax and retry the operation.

——— **DS_E_INVALID_ATTRIBUTE_VALUE**

Severity: Error **Component:** Directory Services

Text: The attribute value in the AVA does not conform to the attribute syntax.

Explanation: This is an instance of an OM class **DS_C_NAME_ERROR**. The attribute value in an Attribute Value Assertion (AVA) of an Relative Distinguished Name (RDN) contained in the name does not conform to the attribute syntax prescribed for the attribute type in the AVA. This problem is called `invalidAttributeSyntax` in the standards, but that name is used only for a **DS_C_ATTRIBUTE_PROBLEM** in this interface.

Action: Correct the syntax and retry the operation.

——— **DS_E_INVALID_CREDENTIALS**

Severity: Error **Component:** Directory Services

Text: The requestor's credentials are invalid.

Explanation: This is an instance of an OM class **DS_C_SECURITY_ERROR**. The requestor's credentials are invalid. The operation is not executed.

Action: You will not be able to complete the operation unless your credentials are validated.

——— **DS_E_INVALID_REF**

Severity: Error **Component:** Directory Services

Text: The DSA is unable to perform the request as directed.

Explanation: This is an instance of an OM class **DS_C_SERVICE_ERROR**. The Directory Service Agent (DSA) was unable to perform the request as directed; that is, by way of **DS_C_OPERATION_PROGRESS** in the **DS_C_CONTEXT**. This can be due to an invalid referral.

Action: Check that the arguments are correct and try again.

——— **DS_E_INVALID_SIGNATURE**

Severity: Error **Component:** Directory Services

Text: The signature affixed to the request is invalid.

Explanation: This is an instance of an OM class **DS_C_SECURITY_ERROR**. The signature affixed to the request was invalid.

Action: Correct the signature and try again.

——— **DS_E_LOOP_DETECTED**

Severity: Error **Component:** Directory Services

Text: A DSA detected a loop within the directory.

Explanation: This is an instance of a OM class **DS_C_SERVICE_ERROR**. A Directory Service Agent (DSA) detected a loop within the Directory.

Action: Correct the problem that is creating the loop and retry the operation.

——— **DS_E_MISCELLANEOUS**

Severity: Error **Component:** Directory Services

Text: A miscellaneous error occurred while interacting with the Directory Service.

Explanation: This is an instance of an OM class **DS_C_LIBRARY_ERROR**. A miscellaneous error occurred in interacting with the Directory Service. This error is returned if the interface cannot clear a transient system error by retrying the affected system call.

Action: This is a general purpose error message. The XDS log file may provide additional diagnostic information. Retry the operation.

——— **DS_E_MISSING_TYPE**

Severity: Error **Component:** Directory Services

Text: The attribute type is not included in the AVA.

Explanation: This is an instance of an OM class **DS_C_LIBRARY_ERROR**. The attribute type was not included in an Attribute Value Assertion (AVA) that was passed as part of a distinguished name argument.

Action: Include the attribute type in the AVA and retry the operation.

——— **DS_E_MIXED_SYNCHRONOUS**

Severity: Error **Component:** Directory Services

Text: An attempt was made to start a synchronous operation with outstanding asynchronous operations.

Explanation: This is an instance of an OM class **DS_C_LIBRARY_ERROR**. An attempt was made to start a synchronous operation when there are outstanding asynchronous operations.

Action: You cannot mix synchronous and asynchronous operations. Wait until the asynchronous operations complete and then retry the synchronous operation, or abandon the asynchronous operations.

——— **DS_E_NAMING_VIOLATION**

Severity: Error **Component:** Directory Services

Text: The modification leaves the DIT structured incorrectly.

Explanation: This is an instance of an OM class **DS_C_UPDATE_ERROR**. The attempted modification leaves the Directory Information Tree (DIT) structured incorrectly. This means that it tries to add an entry as the subordinate of an alias; or in a region of the DIT not permitted to a member of its object class; or it would define a Relative Distinguished Name (RDN) that includes a forbidden attribute type.

Action: Check the arguments and retry the operation.

——— **DS_E_NO_SUCH_ATTRIBUTE_OR_VALUE**

Severity: Error **Component:** Directory Services

Text: The specified attribute or value was not found in the directory entry.

Explanation: This is an instance of an OM class **DS_C_ATTRIBUTE_PROBLEM**. The specified attribute or value is not found in the Directory entry in question. This is only reported by a **ds_read()** or **ds_search()** operation if an explicit list of attributes is specified by the selection argument, but none of them is present in the entry.

Action: Verify that you are referencing the correct Directory entry. You could also choose to specify no attributes or all attributes rather than an explicit list, or accept the result.

——— **DS_E_NO_SUCH_OBJECT**

Severity: Error **Component:** Directory Services

Text: The specified name does not match the name of any object in the directory.

Explanation: This is an instance of an OM class **DS_C_NAME_ERROR**. The specified name does not match any name of any object in the Directory.

Action: Correct the object name and retry the operation, or accept the result.

——— **DS_E_NO_SUCH_OPERATION**

Severity: Error **Component:** Directory Services

Text: The Directory Service has no knowledge of the operation that is to be abandoned.

Explanation: This is an instance of an OM class **DS_C_ABANDON_FAILED**. The Directory Service has no knowledge of the operation that is to be abandoned. The **ds_abandon** function is not supported by DCE XDS, thus this error is not returned.

Action: None required.

——— **DS_E_NOT_ALLOWED_ON_NON_LEAF**

Severity: Error **Component:** Directory Services

Text: Modification to an interior node of the DIT is prohibited.

Explanation: This is an instance of an OM class **DS_C_UPDATE_ERROR**. An attempt was made to modify a node; however, the modification would be to an interior node of the Directory Information Tree (DIT).

Action: Such a modification is prohibited.

——— **DS_E_NOT_ALLOWED_ON_RDN**

Severity: Error **Component:** Directory Services

Text: The modification alters an object's RDN.

Explanation: This is an instance of an OM class **DS_C_UPDATE_ERROR**. An attempt was made to make a modification that would alter the Relative Distinguished Name (RDN) for an object.

Action: This operation is not permitted on an RDN.

——— **DS_E_NOT_SUPPORTED**

Severity: Error **Component:** Directory Services

Text: An attempt is made to use optional functionality, which is not available in this implementation.

Explanation: This is an instance of an OM class **DS_C_LIBRARY_ERROR**. An attempt was made to use optional functionality, which is not supported in this implementation. This error is also returned if an unrecognized value for the session attribute **DS_AUTH_MECHANISM** was supplied.

Action: None required.

——— **DS_E_OBJECT_CLASS_MOD_PROHIB**

Severity: Error **Component:** Directory Services

Text: The modification alters an entry's object class attribute.

Explanation: This is an instance of an OM class **DS_C_UPDATE_ERROR**. An attempt was made to alter the object class attribute for an entry.

Action: None required since you cannot change the object class attribute for an entry.

——— **DS_E_OBJECT_CLASS_VIOLATION**

Severity: Error **Component:** Directory Services

Text: The modification leaves a directory entry inconsistent with its object class definition.

Explanation: This is an instance of an OM class **DS_C_UPDATE_ERROR**. The attempted modification would leave a Directory entry inconsistent with its object class definition.

Action: Correct the proposed modification to ensure consistency with the entry's class definition, or accept the result.

———— **DS_E_OUT_OF_SCOPE**

Severity: Error **Component:** Directory Services

Text: The Directory cannot provide a referral or partial outcome qualifier within the required scope.

Explanation: This is an instance of an OM class **DS_C_SERVICE_ERROR**. The Directory Service could not provide a referral or partial outcome qualifier within the required scope.

Action: Increase the scope, address another Directory Service Agent.

———— **DS_E_PROTECTION_REQUIRED**

Severity: Error **Component:** Directory Services

Text: The Directory Service is unwilling to perform the operation because it is unsigned.

Explanation: This is an instance of an OM class **DS_E_SECURITY**. The Directory Service was unwilling to perform the operation because it is unsigned.

Action: Retry the operation signed.

———— **DS_E_TIME_LIMIT_EXCEEDED**

Severity: Error **Component:** Directory Services

Text: The operation could not be performed within the specified time limit.

Explanation: This is an instance of an OM class **DS_C_SERVICE_ERROR**. The operation could not be performed within the time specified by the **DS_TIME_LIMIT** service control. No partial results were available, except for **ds_list()** and **ds_search()**, which return an arbitrary selection of the accumulated results.

Action: Increase the time limit.

——— **DS_E_TOO_LATE**

Severity: Error **Component:** Directory Services

Text: The operation has already completed, either successfully or erroneously.

Explanation: This is an instance of an OM class **DS_C_ABANDON_FAILED**. The operation completed, either successfully or erroneously. The Directory Abandon operation is not supported by DCE XDS. Thus, a **ds_abandon()** XDS call always returns a **DS_E_TOO_LATE** error for the **DS_C_ABANDON_FAILED** OM class.

Action: A call to **ds_abandon()** is not useful since DCE does not support asynchronous operations.

——— **DS_E_TOO_MANY_OPERATIONS**

Severity: Error **Component:** Directory Services

Text: No more Directory Service operations can be performed.

Explanation: This is an instance of an OM class **DS_C_LIBRARY_ERROR**. No more Directory Service operations can be performed until at least one asynchronous operation is completed. This should never happen since DCE does not support asynchronous operation.

Action: None required.

——— **DS_E_TOO_MANY_SESSIONS**

Severity: Error **Component:** Directory Services

Text: No more Directory Service sessions can be started.

Explanation: This is an instance of an OM class **DS_C_LIBRARY_ERROR**. No more Directory Service sessions can be started.

Action: Wait until some sessions have stopped and try again.

——— **DS_E_UNABLE_TO_PROCEED**

Severity: Error **Component:** Directory Services

Text: The DSA does not have the administrative authority over the particular naming context.

Explanation: This is an instance of an OM class **DS_C_SERVICE_ERROR**. A Directory Service Agent (DSA) without administrative authority over a particular naming context was asked to resolve a name in that context.

Action: You need to change the **DS_DSA_NAME** to one that has administrative authority.

——— **DS_E_UNAVAILABLE**

Severity: Error **Component:** Directory Services

Text: Some part of the Directory is currently not available.

Explanation: This is an instance of an OM class **DS_C_SERVICE_ERROR**. Some part of the Directory was not available.

Action: Wait and retry the operation.

——— **DS_E_UNAVAILABLE_CRIT_EXT**

Severity: Error **Component:** Directory Services

Text: The requested critical extensions are not available.

Explanation: This is an instance of an OM class **DS_C_SERVICE_ERROR**. One or more critical extensions were requested, but are not available.

Action: Wait and retry the operation.

——— **DS_E_UNDEFINED_ATTRIBUTE_TYPE**

Severity: Error **Component:** Directory Services

Text: The attribute type is undefined.

Explanation: This is an instance of an OM class **DS_C_ATTRIBUTE_PROBLEM**. The attribute type, supplied to **ds_add_entry()** or **ds_modify_entry()**, was undefined.

Action: Be sure the attribute type supplied to **ds_add_entry()** or **ds_modify_entry()** is defined.

——— **DS_E_UNWILLING_TO_PERFORM**

Severity: Error **Component:** Directory Services

Text: Some part of the Directory Service is not willing to perform the operation.

Explanation: This is an instance of an OM class **DS_C_SERVICE_ERROR**. Some part of the Directory Service was not willing to perform the operation because it requires excessive resources, or because doing so violates administrative policy.

Action: None required since the operation cannot be performed as requested.

0x115ca076 dts_s_acl_create_default

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't create the default DTS ACL: %s

Explanation: An attempt to create the default DTS ACL failed

Action: DCE utilities error. Check utilities codes for more info

0x115ca074 dts_s_acl_dbopen_create

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't create DTS acl database (%s): %s

Explanation: An attempt to create the DTS ACL database failed

Action: DCE utilities error. Check utilities codes for more info

0x115ca072 dts_s_acl_dbopen_read

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't open DTS acl database (%s)for reading: %s

Explanation: An attempt to open the DTS acl database failed

Action: DCE utilities error. Check utilities codes for more info

0x115ca075 dts_s_acl_register_obj_types

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't register DTS object type with ACL library: %s

Explanation: An attempt to register the dtsd ACL object type failed

Action: DCE utilities error. Check utilities codes for more info

0x115ca07d dts_s_aclv0_register

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't register the Version 0 rdacl interface with the endpoint map: %s

Explanation: An attempt to register the DTS rdacl interface failed

Action: This is an RPC error. Check RPC status code for more info

0x115ca07c dts_s_aclv0_runtime_register

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't register the version 0.0 rdacl interface with the RPC runtime: %s

Explanation: An attempt to register the DTS rdacl interface failed

Action: This is an RPC runtime error. Check RPC status code for more info

0x115ca079 dts_s_aclv0_unregister

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't unregister the Version 0 rdacl interface from the endpoint map: %s

Explanation: An attempt to unregister the DTS rdacl interface failed

Action: This is an RPC error. Check RPC status code for more information

0x115ca07b dts_s_aclv1_register

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't register the Version 1 rdacl interface with the endpoint map: %s

Explanation: An attempt to register the DTS rdacl interface failed

Action: This is an RPC error. Check RPC status code for more info

0x115ca07a dts_s_aclv1_runtime_register

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't register the version 1.0 rdacl interface with the RPC runtime: %s

Explanation: An attempt to register the DTS rdacl interface failed

Action: This is an RPC error. Check RPC status code for more info

0x115ca078 dts_s_aclv1_unregister

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't unregister the version 1.0 rdacl interface from the endpoint map: %s

Explanation: An attempt to unregister the DTS rdacl interface failed

Action: This is an RPC error. Check RPC status codes for more information

0x115ca06c dts_s_add_profile

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't add Global Time Server entry to right profile: %s

Explanation: The rpc_ns_profile_elt_add() failed for the Global Time Server

Action: See RPC error codes for error code and diagnostics

0x115ca044 dts_s_adjustlocal

Severity: Error **Component:** dts/dts_s_events

Text: Local clock was not intersecting: local time = %s, computed time = %s. It will be adjusted.

Explanation: During an attempted synchronization, DTS detected that a clock's value and its inaccuracy did not intersect with those servers used for synchronization. Since the faulty time interval supplied by the clock was within the bounds of the attribute **tolerance**, DTS gradually adjusts the clock.

Action: If you wish to have the clock set abruptly in the future, increase the **tolerance** attribute. If you are satisfied with the adjustment, then no action is required.

0x115ca010 dts_s_alloc_virt

Severity: Varies **Component:** dts

Text: Memory allocation failure

Explanation: An error was encountered when attempting to allocate more memory

Action: None required.

0x115ca00f dts_s_another_time_serv

Severity: Varies **Component:** dts

Text: Time service already running on this node

Explanation: An attempt was made to create a time server or time clerk entity on a system where one is already running.

Action: None required.

0x115ca0a7 dts_s_attr_encoding

Severity: Error **Component:** dts/dts_s_error

Text: Unexpected data type value returned for dts attributes: %s

Explanation: dts expects configuration attributes as an array of printstrings

Action: Check entered configuration attributes for the dtstd

0x115ca03a dts_s_aud_open_daemon_failed

Severity: Varies **Component:** dts

Text: Cannot reach the audit daemon

Explanation: There may be no audit daemon running

Action: Start an audit daemon.

0x115ca039 dts_s_aud_open_file_failed

Severity: Varies **Component:** dts

Text: Cannot open the audit trail file

Explanation: An attempt to open the audit-trail file failed because the file does not have write permission.

Action: Check the file permissions and correct it to allow for write access.

0x115ca0aa dts_s_bad_attr

Severity: Warning **Component:** dts/dts_s_error

Text: Invalid configuration attribute %s specified\n

Explanation: An unrecognized configuration attribute was passed to dtstd

Action: Remove the entry for this attribute

0x115ca0af dts_s_bad_attr_type

Severity: Warning **Component:** dts/dts_s_error

Text: Unknown attribute type, associated config attribute not set

Explanation: An invalid type was derived for a specified configuration attribute. The specified attribute was not set

Action: Only provide permitted attributes for dtsd via dced

0x115ca022 dts_s_bad_command

Severity: Varies **Component:** dts

Text: Illegal dts command:

Explanation: An attempt was made to issue a command that is not a legal DTS command.

Action: See the dcecp man page for a list of legal dts commands.

0x115ca050 dts_s_bad_timestamp

Severity: Warning **Component:** dts/dts_s_config

Text: Server %s returned invalid timestamp.

Explanation: Invalid data received.

Action: Check configuration on the server.

0x115ca05e dts_s_binding_file_read_error

Severity: Error **Component:** dts/dts_s_error

Text: The OS call to open the file for reading failed

Explanation: The attempt to open the local dtsd bindings file for reading failed with an OS error

Action: The OS diagnostic is printed out as part of the message. Fix and restart

0x115ca05d dts_s_binding_file_write_error

Severity: Error **Component:** dts/dts_s_error

Text: OS call to open the file for writing

Explanation: The attempt to open the local binding file failed because of an OS error

Action: Check the OS error; fix, and restart

0x115ca061 dts_s_binding_import

Severity: Error **Component:** dts/dts_s_error

Text: Binding import from namespace fails: %s

Explanation: The initial call to the RPC name space API failed

Action: Check namespace based on the returned error message

0x115ca069 dts_s_binding_import_next

Severity: Error **Component:** dts/dts_s_error

Text: Failed to retrieve server binding from the namespace: %s

Explanation: The call to retrieve the server's bindings from the namespace failed

Action: Check the namespace for errors

0x115ca063 dts_s_binding_inq_name

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't get remote server entry name: %s

Explanation: The call to retrieve the server's entry name failed

Action: Check the nameservice and endpoint maps for the Time Server entry

0x115ca03b dts_s_cannot_open_audit_trail

Severity: Varies **Component:** dts

Text: Cannot open the audit trail file

Explanation: An attempt to open the audit-trail file failed because the file does not have write permission.

Action: Check the file permissions and correct it to allow for write access.

0x115ca0a1 dts_s_cell_name

Severity: Error **Component:** dts/dts_s_error

Text: Failed to retrieve cell name: %s

Explanation: The attempt to retrieve the cell name from the configuration database failed

Action: Check validity of local configuration database

0x115ca06e dts_s_cf_hostname

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't retrieve this host's name from the configuration database: %s

Explanation: Retrieving the local host's name from the configuration database failed

Action: Probably a configuration error. Fix and restart

0x115ca095 dts_s_cf_profile_name

Severity: Error **Component:** dts/dts_s_error

Text: Failure retrieving profile entry from host: %s

Explanation: An attempt to retrieve the name of the default profile failed

Action: Probably a configuration error. Fix and restart

0x115ca042 dts_s_clerk_request

Severity: Error **Component:** dts/dts_s_dtsdate

Text: RPC call ClerkRequestTime() to remote server failed: %s

Explanation: The ClerkRequestTime RPC call failed to the requested remote server

Action: Determine cause of failure and correct

0x115ca043 dts_s_clockset

Severity: Error **Component:** dts/dts_s_events

Text: Clock was set: old time = %s, new time = %s

Explanation: The server has set the clock.

Action: None required.

0x115ca017 dts_s_comm_failure

Severity: Varies **Component:** dts

Text: Communication failure with time service

Explanation: General communications failure

Action: Check that DCE is running correctly on your node.

0x115ca098 dts_s_control_ep_unregister

Severity: Warning **Component:** dts/dts_s_error

Text: Failed to unregister Control interface from the endpoint map: %s

Explanation: The RPC call to unregister the Control interface from the endpoint map failed

Action: Delete entry from endpoint map; otherwise, nothing

0x115ca099 dts_s_control_unexport

Severity: Warning **Component:** dts/dts_s_error

Text: Failed to unexport Control interface from the namespace: %s

Explanation: The RPC call to unregister the Control interface from the namespace failed

Action: Delete entry from the namespace; otherwise, nothing

0x115ca025 dts_s_cp_error

Severity: Varies **Component:** dts

Text: Error executing command:

Explanation: An error occurred executing a **dts** command.

Action: Re-issue the command

0x115ca01b dts_s_cp_init_prs

Severity: Varies **Component:** dts

Text: Cannot initialize DTS command parser - reason:

Explanation: ?

Action: None required.

0x115ca01a dts_s_cp_init_rpc

Severity: Varies **Component:** dts

Text: Control program cannot get rpc binding to DTS daemon - reason:

Explanation: ?

Action: None required.

0x115ca00a dts_s_created

Severity: Varies **Component:** dts

Text: Time service already created

Explanation: An attempt was made to create a time server or time clerk entity on a system where one already existed.

Action: None required.

0x115ca077 dts_s_db_store_uuid

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't store the dtsd ACL in the ACL file: %s

Explanation: An attempt to store the DTS ACL in the database failed

Action: DCE utilities error. Check utilities codes for more info

0x115ca058 dts_s_dce_error

Severity: Error **Component:** dts/dts_s_events

Text: DCE error %s

Explanation: DCE error occurred.

Action: Verify DCE operation and configuration.

0x115ca04e dts_s_different_epoch

Severity: Warning **Component:** dts/dts_s_general

Text: Current epoch %d, differs from epoch %d of server %s

Explanation: While attempting a synchronization, a server encountered a server whose epoch number did not match its own. The clock value from this differing server was ignored.

Action: Verify the epoch number of the server by using the **dts show** command. To change a server's epoch number issue the command **clock set -epoch integer**.

0x115ca03e dts_s_dtsdate_usage

Severity: Error **Component:** dts/dts_s_dtsdate
Text: Usage: dtsdate [-s] [-q] [-u] hostname [skew-seconds]
Explanation: This is the appropriate set of command line arguments
Action: Re-run command with appropriate arguments

0x115ca024 dts_s_dtsd_comm

Severity: Varies **Component:** dts
Text: Cannot contact dts daemon - rpc failure:
Explanation: An attempt was made to restart the DTS daemon; however, an rpc error occurred.
Action: Make sure that the dts daemon is running: if not, see the DTS Administration documentation on how to restart

0x115ca068 dts_s_entry_object_inq_begin

Severity: Error **Component:** dts/dts_s_error
Text: Couldn't retrieve UUID for server %s from the namespace: %s
Explanation: An attempt to retrieve the server's UUID failed
Action: Check the namespace for errors

0x115ca067 dts_s_entry_object_inq_next

Severity: Error **Component:** dts/dts_s_error
Text: Couldn't retrieve UUID for server %s from the namespace: %s
Explanation: An attempt to retrieve the server's UUID failed
Action: Check the namespace for server's entry

0x115ca004 dts_s_epoch_range

Severity: Varies **Component:** dts
Text: Epoch out of range or not different from current epoch

Explanation: An attempt was made to change the epoch, but the number given was out of range

Action: Re-enter the command using an integer from 0 to 255

0x115ca08a dts_s_ep_register_controlv2

Severity: Error **Component:** dts/dts_s_error

Text: Failed to register Time Control Version 2.0 interface with endpoint map: %s

Explanation: The RPC call to register the Time Control V2 interface with the endpoint map failed

Action: This is an RPC error. Check RPC status code for more info

0x115ca08b dts_s_ep_register_serviceability

Severity: Error **Component:** dts/dts_s_error

Text: Failed to register Serviceability interface with endpoint map: %s

Explanation: The RPC call to register the Serviceability interface with the endpoint map failed

Action: This is an RPC error. Check RPC status code for more info

0x115ca06a dts_s_ep_register_tp

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't register Global Time Server interface: %s

Explanation: An attempt to register the Global Time Server interface failed

Action: Check RPC status codes for the reason for the error

0x115ca041 dts_s_ep_resolve_binding

Severity: Error **Component:** dts/dts_s_dtsdate

Text: Couldn't obtain binding to remote time server %s using protocol %s: %s

Explanation: A complete binding handle couldn't be obtained from the server requested

Action: See if the remote host is running a DTS time server

0x115ca011 dts_s_error_create

Severity: Varies **Component:** dts
Text: An error occurred while creating the time service
Explanation: ?
Action: Fix and restart.

0x115ca054 dts_server_epoch_changed

Severity: Notice **Component:** dts/dts_s_events
Text: Epoch Change completed, old epoch = %d, new epoch = %d
Explanation: Time epoch modified.
Action: None required.

0x115ca053 dts_server_no_memory

Severity: Fatal **Component:** dts/dts_s_events
Text: Insufficient virtual memory
Explanation: Memory allocation failed.
Action: Try increasing swap space.

0x115ca052 dts_server_not_responding

Severity: Warning **Component:** dts/dts_s_events
Text: Server %s not responding, error return is %s
Explanation: An attempt was made to query a global server and the time-out setting elapsed the number of times specified by the **queryattempts** attribute. The server is removed from the system list of global servers.
Action: The default setting for the **globaltimeout** attribute is 15 seconds. Because of communications delays on WAN links, you may need to adjust this setting to avoid this error. Advertise the server as a global server. Increase the **global set timeout** setting. If the error persists, check for problems with the communications link.

0x115ca03c dts_s_exiting

Severity: Varies **Component:** dts

Text: Server exiting

Explanation: Server received interrupt or shut down request.

Action: None required.

0x115ca070 dts_s_export_acl_if

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't export the ACL manager interface: %s

Explanation: An attempt to export the ACL manager interface failed

Action: Utilities component error. Check utilities error codes for more information

0x115ca08c dts_s_export_control

Severity: Error **Component:** dts/dts_s_error

Text: Failed to export Time Control interface to the namespace: %s

Explanation: The RPC call to export the Time Control interface to the namespace failed

Action: This is an RPC namespace error. Refer to RPC codes for more information

0x115ca06b dts_s_export_gts

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't export Global Time Server entry to the namespace: %s

Explanation: The binding_export() call to the namespace failed

Action: Check the namespace for errors

0x115ca092 dts_s_export_tservicev1

Severity: Error **Component:** dts/dts_s_error

Text: Failed to export Time Control V1 interface to the namespace: %s

Explanation: The RPC call to export the Time Control V1 interface with the namespace failed

Action: Probably a configuration error. Fix and restart

0x115ca094 dts_s_export_tservicev2

Severity: Error **Component:** dts/dts_s_error

Text: Failed to export Time Control V2 interface to the namespace: %s

Explanation: The RPC call to export the Time Control V2 interface to the namespace failed

Action: This is an RPC namespace error. Check RPC status code for more info

0x115ca015 dts_s_failed

Severity: Varies **Component:** dts

Text: Failure

Explanation: General failure code

Action: None required.

0x115ca073 dts_s_fetch_uid

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't retrieve the ACL for the dtsd: %s

Explanation: The utilities call to fetch the dtsd ACL failed

Action: DCE utilities error. Check utilities codes for more info

0x115ca05f dts_s_get_cell_name

Severity: Error **Component:** dts/dts_s_error

Text: Retrieval of DCE cell name failed: %s

Explanation: The dce_cf_get_cell_name() function call failed.

Action: Probably a configuration error. Look in configuration file

0x115ca090 dts_s_get_expiration

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't get the expiration time of server's credentials: %s

Explanation: The RPC call to retrieve the TGT lifetime for the server's identity failed

Action: This is an RPC error. Check RPC status code for more info

0x115ca060 dts_s_get_profile_name

Severity: Error **Component:** dts/dts_s_error

Text: Can't resolve profile name: %s

Explanation: The GetProfileName() function call failed.

Action: Probably profile found but default entry does not refer to another profile

0x115ca046 dts_s_global_nointersect

Severity: Warning **Component:** dts/dts_s_events

Text: Global server %s returned time %s which does not intersect computed time %s

Explanation: During synchronization, the time-provider (TP) server detected that the time for a global server does not intersect with the TP.

Action: None required.

0x115ca005 dts_s_has_provider

Severity: Varies **Component:** dts

Text: Command illegal while a time provider is present

Explanation: An attempt was made to set the **courier role** to **courier**. The server system, however, is connect to a time provider, which means the **courier role** must be **noncourier**. This is set automatically and cannot be changed

Action: None required.

0x115ca0a3 dts_s_id_parse_name

Severity: Error **Component:** dts/dts_s_error

Text: Failed to retrieve Cell UUID: %s

Explanation: The attempt to retrieve the Cell UUID given the cell name failed

Action: This is a Security error: check security error codes for more information

0x115ca07e dts_s_init_mgmt_acl

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't initialize the dts daemon management ACL: %s

Explanation: An attempt to initialize the dts daemon management ACL failed

Action: This is a DCE utilities error. Check utilities error codes

0x115ca0a6 dts_s_inq_attr

Severity: Warning **Component:** dts/dts_s_error

Text: Failure in retrieving DTS attributes from dced: %s

Explanation: A dce_server_inq_attr() call for dtss configuration attributes failed for the stated reason

Action: Fix and restart the dtss

0x115ca089 dts_s_inq_bindings

Severity: Error **Component:** dts/dts_s_error

Text: Failed to retrieve server bindings from RPC runtime: %s

Explanation: The RPC call rpc_server_inq_bindings failed

Action: This is an RPC error. Check RPC status code for more info

0x115ca064 dts_s_inq_server_princ

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't get remote server's principal name: %s

Explanation: The call to retrieve the server's entry name failed

Action: Check the name service and endpoint maps

0x115ca03f dts_s_interface_id

Severity: Error **Component:** dts/dts_s_dtssdate

Text: Couldn't extract interface ID from time service interface: %s

Explanation: The rpc_if_inq_id() function returned a DCE status code indicating failure

Action: Determine cause of failure and re-run the command

0x115ca0ab dts_s_invalid_attr_value

Severity: Warning **Component:** dts/dts_s_error

Text: An invalid value (%s) was entered for the attribute %s\n

Explanation: An invalid or out-of-range value was entered for the specified attribute

Action: Fix and restart the dtsd

0x115ca0a9 dts_s_invalid_type

Severity: Warning **Component:** dts/dts_s_error

Text: Unknown attribute type found in internal table\n

Explanation: This is a dtsd internal error, and should never happen

Action: Report to your DCE provider

0x115ca006 dts_s_is_started

Severity: Varies **Component:** dts

Text: Time service has already been started

Explanation: An attempt was made to enable a DTS entity that is already functioning

Action: None required.

0x115ca047 dts_s_local_nointersect

Severity: Warning **Component:** dts/dts_s_events

Text: Local server %s returned time %s which does not intersect computed time %s

Explanation: During synchronization, the time-provider (TP) server detected that the time for a local server does not intersect with the TP.

Action: None required.

0x115ca086 dts_s_mgmt_srvr_listening

Severity: Error **Component:** dts/dts_s_error

Text: Error in rpc_mgmt_is_server_listing() call: %s

Explanation: The RPC call `rpc_mgmt_is_server_listening` unexpectedly failed

Action: This is an RPC error. Check RPC status code for more info

0x115ca0a5 dts_s_mgmt_srvr_listen_timeout

Severity: Error **Component:** dts/dts_s_error

Text: dtstd server still isn't accepting RPC connections after %d seconds

Explanation: The dtstd server had not issued an `rpc_server_listen()` call after the indicated number of seconds

Action: Check logs for problems in the dtstd initializing, or failures in other components, such as the directory service

0x115ca034 dts_s_mgt_no_read

Severity: Varies **Component:** dts

Text: Must have read permission for the DTS entity

Explanation: The attempted operation requires read permission, which the user does not have for this DTS entity.

Action: You cannot perform the operation unless you acquire read permission for the entity.

0x115ca035 dts_s_mgt_no_write

Severity: Varies **Component:** dts

Text: Must have write permission for the DTS entity

Explanation: An attempt was made to execute a command on a DTS entity. The operation, however, requires write permission on the ACL associated with the DTS entity.

Action: Ensure that you have write access on the ACL associated with the desired DTS entity and retry the operation. If you need to run **dtstd**, you must be the machine principal on the local host on which you are trying to run **dtstd**.

0x115ca036 dts_s_mgt_unauthn

Severity: Varies **Component:** dts

Text: The DTS control program is not authenticated:

Explanation: The DTS control program does not have the proper DCE authentication

Action: None required.

0x115ca0ac dts_s_mutexattr_create

Severity: Fatal **Component:** dts/dts_s_error

Text: Failed to create dtsd global data mutex attribute

Explanation: An unexpected failure in created a mutex attribute occurred

Action: Fix and restart the dtsd

0x115ca0ae dts_s_mutexattr_setkind

Severity: Fatal **Component:** dts/dts_s_error

Text: Failed to set mutex attributed kind

Explanation: An unexpected failure in setting the kind of a mutex ttribute occurred

Action: Fix and restart the dtsd

0x115ca0ad dts_s_mutex_init

Severity: Fatal **Component:** dts/dts_s_error

Text: Failed to initialize dtsd global data mutex attribute

Explanation: An unexpected failure in initializing a mutex occurred

Action: Fix and restart the dtsd

0x115ca051 dts_s_no_global_servers

Severity: Notice **Component:** dts/dts_s_events

Text: No global servers detected

Explanation: An attempted synchronization that required a global server failed. No global server was detected. This may occur because you have not advertised a server as a global server or because the link is down to the global server.

Action: Use the **dts catalog** command to confirm that there is a global server configured. If there is not, then use the **dts configure** command to set one. If there is, then there must be a problem with the link to the network where the global server is located. Check for network problems.

0x115ca009 dts_s_nopriv

Severity: Varies **Component:** dts

Text: Access denied for attempted operation

Explanation: An attempt was made to execute a dts command for which you do not have permission. Generally, you need write permission on the ACL associated with the DTS entity in order to execute a dts command. The **dtstd** command can only be started by the local host machine principal.

Action: Ensure that you have write access on the ACL associated with the desired DTS entity and retry the operation. If you need to run **dtstd**, you must be the machine principal on the local host on which you are trying to run **dtstd**.

0x115ca059 dts_s_no_profile

Severity: Error **Component:** dts/dts_s_events

Text: LAN profile not found

Explanation: LAN profile not found in name service

Action: Verify name service and DCE operation.

0x115ca001 dts_s_normal

Severity: Varies **Component:** dts

Text: Successful completion

Explanation: Operation performed

Action: None required.

0x115ca00b dts_s_not_created

Severity: Varies **Component:** dts

Text: Time service has not been created

Explanation: An attempt was made to issue the **dts activate** command for a DTS entity; however, the entity has not been created.

Action: Create the DTS entity and then issue the **dts activate** command.

0x115ca00c dts_s_not_enabled

Severity: Varies **Component:** dts

Text: Time service has not been enabled

Explanation: An attempt was made to issue a command for a DTS entity that is not enabled.

Action: Issue the **dts activate** command for the DTS entity and retry the desired operation

0x115ca019 dts_s_not_global_server

Severity: Varies **Component:** dts

Text: Not a global time server

Explanation: An attempt was made to issue the **dts configure** command to remove a global server. The server, however, was not a global server.

Action: To determine which global servers are known to the node, issue the **dts show** command. You can then use **dts configure** to remove those you no longer want.

0x115ca00d dts_s_no_time_updated

Severity: Varies **Component:** dts

Text: New time not contained in current time interval

Explanation: An attempt was made to adjust the system clock to a new time; however, the new time would be less accurate than the current time.

Action: Retry the operation making sure that the new time and inaccuracy you specify forms a smaller interval than the current system interval. That is, the new setting must be more accurate than the current setting. The minimum inaccuracy achievable with the **update** command is approximately 1 second. Any lower setting is not recommended.

0x115ca05a dts_s_not_in_group

Severity: Warning **Component:** dts/dts_s_events

Text: Server %s not in security group %s

Explanation: A global server from a remote cell was added to the local cell profile; however, the name of the server was not added to the security group.

Action: You must add the name of the server to the `./:/subsys/dce/dts-servers` security group using the **dcecp** security command **group add**. You must have write permission to edit the registry database.

0x115ca00e dts_s_not_server

Severity: Varies **Component:** dts

Text: Command only valid for servers

Explanation: An attempt was made to issue a command against a DTS clerk entity; the command is only valid for a DTS server entity.

Action: None required.

0x115ca013 dts_s_open_decnet

Severity: Varies **Component:** dts

Text: Cannot open decnet port

Explanation: An attempt was made to access a node through an decnet port; however, the port was unavailable.

Action: Wait and retry the operation.

0x115ca012 dts_s_open_ethernet

Severity: Varies **Component:** dts

Text: Cannot open ethernet port

Explanation: An attempt was made to access a node through an ethernet port; however, the port was unavailable

Action: Wait and retry the operation

0x115ca09f dts_s_pgo_is_member

Severity: Error **Component:** dts/dts_s_error

Text: Failed to determine if server is in security group: %s

Explanation: The attempt to determine if the server is in the server group failed

Action: This is a Security error. Check RPC status code for more info

0x115ca0a4 dts_s_pgo_name_id

Severity: Error **Component:** dts/dts_s_error

Text: Failed to convert host name to host UUID: %s

Explanation: The attempt to retrieve the host UUID using the host name failed

Action: This is a Security failure: check security error codes for more information

0x115ca0a0 dts_s_prin_host

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't retrieve machine principal name: %s

Explanation: The attempt to retrieve the machine principals name for this host from the configuration database failed

Action: Check validity of local configuration database

0x115ca096 dts_s_profile_begin

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't initialize search of node's initial profile: %s

Explanation: The RPC call to initialize an element search of a profile failed

Action: This is an RPC error. Check RPC status code for more info

0x115ca06d dts_s_profile_remove

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't delete server entry from LAN/Cell profile: %s

Explanation: The call to remove the servers entry from the LAN/WAN profile failed

Action: Check for namespace problems.

0x115ca055 dts_s_provider_failed

Severity: Warning **Component:** dts/dts_s_events

Text: Time provider failure detected

Explanation: Time provider error found.

Action: Verify time provider configuration

0x115ca056 dts_s_provider_timeout

Severity: Warning **Component:** dts/dts_s_events

Text: Time provider timeout detected

Explanation: An attempt was made to query a local server and the time-out setting elapsed the number of times specified by the **queryattempts** attribute.

Action: Increase the number specified in the **queryattempts** attribute. The default is 3.

0x115ca021 dts_s_prsact_fatal

Severity: Varies **Component:** dts

Text: Fatal error parsing command:

Explanation: A fatal error was detected while parsing the specified command

Action: None required.

0x115ca01f dts_s_prsfile_fatal

Severity: Varies **Component:** dts

Text: Fatal command parser error reading table %s

Explanation: A fatal error occurred while reading the indicated table.

Action: None required.

0x115ca020 dts_s_prsfile_format

Severity: Varies **Component:** dts

Text: Illegal format - parse table file %s

Explanation: A format error was discovered in the named parse table file

Action: None required.

0x115ca01c dts_s_prsfile_open

Severity: Varies **Component:** dts

Text: Cannot open parse table file %s

Explanation: An attempt to open a parse table file failed.

Action: None required.

0x115ca01d dts_s_prsfile_read

Severity: Varies **Component:** dts

Text: Cannot read parse table file %s

Explanation: An attempt to read a parse table file failed.

Action: None required.

0x115ca01e dts_s_prsfile_version

Severity: Varies **Component:** dts

Text: Obsolete command parse table %s

Explanation: An obsolete command parse table file was discovered.

Action: None required.

0x115ca023 dts_s_prs_unknown

Severity: Varies **Component:** dts

Text: Unknown fatal command parser error

Explanation: An unknown error occurred whilst parsing.

Action: None required.

0x115ca05c dts_s_read_bindings

Severity: Error **Component:** dts/dts_s_error

Text: Failed to read string bindings for local dts from file: %s

Explanation: An attempt to read the string bindings for the local dtsd from the bindings file failed

Action: The OS diagnostic is printed out as part of the message. Fix and restart

0x115ca008 dts_s_read_only

Severity: Varies **Component:** dts

Text: Attempt to modify a read-only attribute

Explanation: An attempt was made to issue the **dts modify** command an attribute that is read-only.

Action: Retry the command with an acceptable attribute and value. Check the **dts modify** man page to determine those attribute that are acceptable

0x115ca08f dts_s_refresh_identity

Severity: Error **Component:** dts/dts_s_error

Text: Failed to refresh the server's identity: %s

Explanation: The RPC call to refresh the DTS server's identity for its login context failed

Action: This is a security failure. Check RPC and security failure codes

0x115ca06f dts_s_register_acl_if

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't register the ACL manager interface: %s

Explanation: An attempt to register the ACL manager interface failed

Action: Utilities component error. Check utilities error codes for more information

0x115ca045 dts_s_resetlocal

Severity: Error **Component:** dts/dts_s_events

Text: Local clock was not intersecting: local time = %s, computed time = %s. It has been reset.

Explanation: During an attempted synchronization, DTS detected that the local clock's value and its inaccuracy did not intersect with those servers used for synchronization. Since the faulty time interval supplied by the clock was outside the bounds of the attribute **tolerance**, DTS immediately resets the clock.

Action: If you wish to have the clock set gradually in the future, increase the **tolerance**. attribute. If you are satisfied with the adjustment, then no action is required.

0x115ca0a2 dts_s_rgy_site_open

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't open Registry site for security info: %s

Explanation: The attempt to open a context for the Security registry failed

Action: This is a Security error; check security error codes for more information

0x115ca0b2 dts_s_routing_switch

Severity: Error **Component:** dts/dts_s_error

Text: Bad argument given to -w switch: %s

Explanation: An invalid serviceability routing value was given as an argument to the -w switch

Action: Fix and restart the daemon

0x115ca071 dts_s_rpc_sm_enable

Severity: Error **Component:** dts/dts_s_error

Text: Failed to initialize RPC memory allocation: %s

Explanation: An attempt to rpc_sm_enable_allocate() failed

Action: RPC error. Check RPC status codes for more info

0x115ca065 dts_s_sec_id_parse

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't parse the remote Time Server's principal name: %s

Explanation: The call to parse the server's principal name failed

Action: Determine cause of error for the error message

0x115ca08d dts_s_sec_key_mgmt

Severity: Error **Component:** dts/dts_s_error

Text: Failure in sec_key_mgmt_manage_key() routine: %s

Explanation: The security call to automatically change a principal's key before it expires failed

Action: This is a RPC security error. Check RPC status codes for more information

0x115ca0b1 dts_s_security_init

Severity: Error **Component:** dts/dts_s_error

Text: Error retrieving security configuration information: %s

Explanation: An error occurred when retrieving the security configuration information for the dts daemon

Action: Fix and restart the daemon

0x115ca080 dts_s_select_strbind

Severity: Warning **Component:** dts/dts_s_error

Text: Couldn't select a string binding for the Time Provide Interface: %s

Explanation: The dtsd couldn't create a string binding for a local Time Provider interface

Action: This is an RPC error. Check RPC errors for more info

0x115ca0a8 dts_s_server_only

Severity: Warning **Component:** dts/dts_s_error

Text: The attribute %s is not settable when dtsd is running as a clerk\n

Explanation: Certain variables can only be set when dtsd is running as a server.

Action: Remove this variable from the set of configuration attributes

0x115ca07f dts_s_server_reg_auth_info

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't register server authentication info: %s

Explanation: An attempt to register the server authentication info failed

Action: This is a security error. Check security errors for more information

0x115ca007 dts_s_servers_range

Severity: Varies **Component:** dts

Text: Server value out of range

Explanation: An attempt was made to set the **minservers** attribute; however, the value was not within the legal range

Action: Retry the command using a value from 1-10 for the **minservers** attribute. It is recommended that you set the value to 3 or more. The default setting is 3. A smaller value will cause the synchronized time to be a less reliable measure of the Coordinated Universal Time (UTC).

0x115ca09b dts_s_service_ep_unreister

Severity: Error **Component:** dts/dts_s_error

Text: Failed to unregister Service interface from the endpoint map: %s

Explanation: The RPC call to unregister the Service interface from the endpoint map failed

Action: This is an RPC error. Check RPC status code for more info

0x115ca09a dts_s_service_unexport

Severity: Error **Component:** dts/dts_s_error

Text: Failed to unexport Service interface from the namespace: %s

Explanation: The RPC call to unregister the Service interface from the namespace failed

Action: Delete entry from namespace; otherwise, nothing

0x115ca037 dts_s_serv_not_in_ts_group

Severity: Varies **Component:** dts

Text: Server not a member of time servers security group

Explanation: The specified time server is not a member of the time servers security group

Action: Fix and restart

0x115ca066 dts_s_set_auth_info

Severity: Error **Component:** dts/dts_s_error

Text: Couldn't set authorization info for server %s: %s

Explanation: An attempt to set security authorization for the given server failed

Action: Determine cause from error message; fix, and rerun

0x115ca014 dts_s_set_error

Severity: Varies **Component:** dts

Text: Cannot set value

Explanation: An attempt was made to modify a attribute of a DTS entity, but an error occurred (invalid value, or out of range).

Action: Ensure that the value is acceptable for the attribute and retry the operation. Check the **dts modify** man page for legal values for each attribute.

0x115ca062 dts_s_set_exp_age

Severity: Error **Component:** dts/dts_s_error

Text: Failed to set the expiration age for server binding handle: %s

Explanation: The call to set the expiration age of the binding handle for the specified server failed

Action: This is an RPC failure. Check RPC status code for more info

0x115ca018 dts_s_shut_down

Severity: Varies **Component:** dts

Text: The time service has shut down

Explanation: The time service has shut down and is not responding to requests.

Action: None required.

0x115ca04c dts_s_shutdown_complete

Severity: Notice **Component:** dts/dts_s_general

Text: Shutdown complete

Explanation: Server shutdown done.

Action: None required.

0x115ca087 dts_s_srvr_controlv2

Severity: Error **Component:** dts/dts_s_error

Text: Failed to register Time Control Version 2.0 interface with runtime: %s

Explanation: The RPC call to register the Time Control V2 interface failed

Action: This is an RPC error. Check RPC status code for more info

0x115ca088 dts_s_srvr_serviceability

Severity: Error **Component:** dts/dts_s_error

Text: Failed to register Serviceability interface with runtime: %s

Explanation: The RPC call to register the Serviceability interface failed

Action: This is an RPC error. Check RPC status code for more info

0x115ca038 dts_s_starting

Severity: Varies **Component:** dts

Text: Server started

Explanation: The server is ready to process requests.

Action: None required.

0x115ca04b dts_s_startup_done

Severity: Notice **Component:** dts/dts_s_general

Text: Startup completed

Explanation: Server initialization done.

Action: None required.

0x115ca04d dts_s_startup_done_set

Severity: Notice **Component:** dts/dts_s_general

Text: Startup completed

Explanation: Server initialization done; clock set.

Action: None required.

0x115ca03d dts_s_superuser

Severity: Error **Component:** dts/dts_s_dtsdate

Text: You must be superuser to adjust the clock

Explanation: You must have special privileges to set the system clock

Action: Obtain appropriate privileges and re-run the command

0x115ca097 dts_s_svc_ep_unregister

Severity: Warning **Component:** dts/dts_s_error

Text: Failed to unregister Serviceability interface from the endpoint map: %s

Explanation: The RPC call to unregister the Serviceability interface from the endpoint map failed

Action: Delete entry from endpoint map; otherwise, nothing

0x115ca048 dts_s_sync_complete

Severity: Notice **Component:** dts/dts_s_sync

Text: Synchronization completed, computed time = %s, adjustment = %s

Explanation: Time synchronization done.

Action: None required.

0x115ca002 dts_s_synching

Severity: Varies **Component:** dts

Text: Command illegal while synchronization in progress

Explanation: An attempt was made to issue a command that is illegal during a synchronization

Action: Wait until synchronization completes and retry the command

0x115ca057 dts_s_system_error

Severity: Error **Component:** dts/dts_s_events

Text: Local system error %s

Explanation: Local operating system error occurred.

Action: Verify system operation.

0x115ca04a dts_s_too_few_servers

Severity: Warning **Component:** dts/dts_s_config

Text: Too few servers (%ld), need %ld servers

Explanation: An attempt was made to synchronize the clocks, but fewer than three servers were available. To compute a reliable time, a minimum of three servers is required. If **minservers** is set to more than three and you receive this error, then the required number were not available for synchronization.

Action: Correct the cell configuration to include at least three servers. If **minservers** is set to more than three, then the link to a server must be down. Either wait until the link is restored, or reconfigure your network so that three will always be available. See the section on 'Configuration Planning for WANs and WAN Links' in the *OSF DCE Administration Guide—Core Components* for additional information on configuring your time servers.

0x115ca04f dts_s_toomany_servers

Severity: Warning **Component:** dts/dts_s_config

Text: Too many servers (%d), only %d supported

Explanation: Ignoring extra servers

Action: Verify cell configuration.

0x115ca085 dts_s_tp_auth_info

Severity: Warning **Component:** dts/dts_s_error

Text: Couldn't add authentication to the Time Provider binding: %s

Explanation: The attempt to add authentication to the binding handle for the Time Provider failed

Action: This is a DCE security error. Check Security codes for more information

0x115ca081 dts_s_tp_binding

Severity: Warning **Component:** dts/dts_s_error

Text: Couldn't generate a binding for the Time Provider Interface: %s

Explanation: The dtسد couldn't create a string binding for a local Time Provider interface

Action: This is an RPC error. Check RPC errors for more info

0x115ca082 dts_s_tp_ep_begin

Severity: Warning **Component:** dts/dts_s_error

Text: Couldn't initiate search for Time Provider Interface in endpoint map: %s

Explanation: The dtsd couldn't begin the search for the Time Provider interface in the endpoint map

Action: This is an RPC error. Check RPC status code for more info

0x115ca083 dts_s_tp_ep_next

Severity: Warning **Component:** dts/dts_s_error

Text: Couldn't continue search for Time Provider Interface in endpoint map: %s

Explanation: The search for the Time Provider interface in the endpoint map failed

Action: This is an RPC error. Check RPC status code for more info

0x115ca084 dts_s_tp_name_search

Severity: Warning **Component:** dts/dts_s_error

Text: Couldn't return the server principal name for the Time Provider Interface: %s

Explanation: An error occurred when trying to retrieve the server principal name for the Time Provider

Action: This is an RPC error. Check RPC status code for more info

0x115ca09c dts_s_tserver_profile_remove

Severity: Error **Component:** dts/dts_s_error

Text: Failed to remove Service interface from the profile %s: %s

Explanation: The RPC call to remove the Service name from the specified profile failed

Action: Delete entry from endpoint map; otherwise, nothing

0x115ca091 dts_s_tservicev1_ep_register

Severity: Error **Component:** dts/dts_s_error

Text: Failed to register Time Control V1 interface with endpoint map: %s

Explanation: The RPC call to register the Time Service V1 interface with the endpoint map failed

Action: This is an RPC error. Check RPC status code for more info

0x115ca093 dts_s_tservicev1_profile_add

Severity: Error **Component:** dts/dts_s_error

Text: Failed to add Time Service entry to LAN profile %s: %s

Explanation: The RPC call to add the Time Service interface to the LAN profile failed

Action: This is an RPC error. Check RPC status code for more info

0x115ca09e dts_s_unexport_acl_mgr

Severity: Error **Component:** dts/dts_s_error

Text: Failed to unexport dtsd ACL manager interface: %s

Explanation: The attempt to unexport the ACL manager interface failed

Action: Delete entry from namespace; otherwise, nothing

0x115ca09d dts_s_unregister_acl_mgr

Severity: Error **Component:** dts/dts_s_error

Text: Failed to unregister dtsd ACL manager interface: %s

Explanation: The attempt to unregister the ACL manager interface failed

Action: Delete entry from endpoint map; otherwise, nothing

0x115ca049 dts_s_update_complete

Severity: Notice **Component:** dts/dts_s_sync

Text: Update command executed, old time = %s, new time = %s

Explanation: Time update done.

Action: None required.

0x115ca003 dts_s Updating time

Severity: Varies **Component:** dts

Text: Command illegal while update time is in progress

Explanation: An attempt was made to issue a command that is illegal during an update time operation

Action: Wait until the update completes and retry the command

0x115ca0b0 dts_s Usage error

Severity: Error **Component:** dts/dts_s_error

Text: Usage: dtsd -d -c -s -g -k courier\|noncourier -o -w service

Explanation: An invalid command line switch was entered

Action: The permitted arguments are listed in the usage message

0x115ca0b3 dts_s User reset

Severity: Warning **Component:** dts/dts_s_error

Text: User reset clock using 'clock set'

Explanation: A synchronization failed because a user issued a 'clock set' command during the synchronization

Action: None necessary. DTS will synchronize automatically

0x115ca040 dts_s UUID to string

Severity: Error **Component:** dts/dts_s_dtsdate

Text: Couldn't convert time service interface UUID to string: %s

Explanation: The RPC function uuid_to_string() failed

Action: Determine cause of failure and re-run the command

0x115ca08e dts_s Validate server ID

Severity: Error **Component:** dts/dts_s_error

Text: Failed to validate the server's identity: %s

Explanation: The attempt to validate the server's identity failed

Action: This is an RPC security error. Check RPC status code for more info

0x115ca05b dts_s_write_bindings

Severity: Error **Component:** dts/dts_s_error

Text: Failed to write local string bindings for dtsd to file: %s

Explanation: The attempt by dtsd to write it's local string bindings into the .../var/adm/time directory failed

Action: The OS diagnostic is printed out as part of the message. Fix and restart

0x115ca016 dts_s_wrong_state

Severity: Varies **Component:** dts

Text: Time service in wrong state

Explanation: An attempt was made to delete an entity, but the state was **on**; or an attempt was made to disable or synchronize an entity, but the state was **off**.

Action: To delete an entity, first be sure you have disabled it. To disable or synchronize an entity, first be sure you have enabled it. Then retry the desired command.

——— **EAGAIN**

Severity: Warning **Component:** Threads

Text: Resource temporarily unavailable

Explanation: If returned by the following routines, the system lacks the necessary resources to complete the operation.

- **pthread_cond_init**
- **pthread_create**
- **pthread_mutex_init**

If returned by the **pthread_cond_timedwait** routine, the time specified by *abstime* expired before the event being waited on transpired.

Action: In most situations, this is a temporary condition, and later calls to the same routine should complete normally.

EBUSY

Severity: Warning **Component:** Threads

Text: Resource busy

Explanation: If returned by the **pthread_cond_destroy** routine, an attempt was made to delete a condition variable for a thread that was executing a **pthread_cond_timewait()** routine or a **pthread_cond_wait()** routine.

If returned by the **pthread_mutex_destroy** routine, an attempt was made to delete a mutex that is locked (has a current owner).

Action: If you still wish to delete the condition variable, wait until the **pthread_cond_timewait()** or **pthread_cond_wait()** routines complete and try again.

A locked mutex is owned by the thread that calls it using the **pthread_mutex_lock** routine. It remains locked until the same thread unlocks it. If no threads are waiting for the mutex, it can be unlocked by using the **pthread_mutex_unlock** routine. It can then be deleted.

EDEADLK

Severity: Warning **Component:** Threads

Text: Resource deadlock avoided

Explanation: The attempted operation would have resulted in one or more threads being permanently blocked from executing. This situation occurs when a thread must wait on a resource that is held by another thread. This error is returned by the following routines:

- **pthread_cond_timedwait**
- **pthread_cond_wait**
- **pthread_mutex_lock**
- **pthread_join**

Action: To avoid a deadlock situation, you can use the following technique:

1. Associate a sequence number with each mutex.
2. Lock mutexes in sequence

3. Do not attempt to lock a mutex with a sequence number lower than that of a mutex the thread already holds.

In addition, if a thread needs to lock the same mutex more than once before unlocking it, specify a recursive mutex in your call to **pthread_mutexattr_setkind_np()**.

———— **EINVAL**

Severity: Error **Component:** Threads

Text: Invalid argument

Explanation: An invalid argument was supplied to a routine. This error can be returned by a number of pthread routines. Generally, the error occurs in one of the following arguments:

- *abstime*
- *attr*
- *cond*
- *delta*
- *interval*
- *key*
- *mutex*
- *thread*
- *value*

Action: Corrective action is dependent on the routine you were calling. For example, when calling the **pthread_cond_timewait** routine and using the *abstime* argument, you could get this error if the current time equals or exceeds the expiration time. To obtain a value for *abstime*, use the **pthread_get_expiration_np** routine. If you receive this error when calling a routine that takes an argument of *thread*, be sure you have named an existing thread. For more information about arguments for specific routines, see the *Application Development Reference*.

Action: None required

———— ENOMEM

Severity: Fatal **Component:** Threads

Text: Not enough space

Explanation: An attempt was made to initialize a condition variable or a mutex, or an attempt was made to create a:

- thread attributes object
- condition variable attributes object
- thread object
- key
- mutex attributes object

There was insufficient memory to complete the operation.

Action: This is generally not a temporary condition. You could try stopping other functions, perhaps applications.

———— ENOTSUP

Severity: Error **Component:** Threads

Text: Operation is not supported

Explanation: An attempt was made to set an unsupported value.

Action: If the error is returned as the result of an invalid priority, ensure that the value is within the minimum and maximum range allowed for the scheduling policy. Specify the priority using the syntax for your programming language. The following specifies a priority midway between the minimum and maximum for the Round Robin policy:

```
pri_rr_mid= (PRI_RR_MIN + PRI_RR_MAX)/2
```

If the error is the result of an invalid policy value, correct it to be one of the following:

- **SCHED_FIFO**
- **SCHED_RR**
- **SCHED_OTEHR**
- **SCHED_FG_NP**
- **SCHED_BG_NP**

———— **EPERM**

Severity: Error **Component:** Threads

Text: Operation not permitted

Explanation: An attempt was made to set or change the priority or policy for a thread, but the caller does not have the appropriate privileges to do so.

Action: Since you do not have the necessary privileges to take make the requested change to the thread, no action is possible.

0x16c9a0d1 ept_s_cant_access

Severity: Varies **Component:** rpc

Text: Cannot access endpoint database

Explanation: The endpoint mapper could not open the existing database file that holds the endpoint map.

Action: Check the permissions on the database file.

0x16c9a0d0 ept_s_cant_create

Severity: Varies **Component:** rpc

Text: Cannot create endpoint database

Explanation: The endpoint mapper could not create the database file that holds the endpoint map.

Action: Check the permissions on the database file and the directory that contains the file.

0x16c9a0cd ept_s_cant_perform_op

Severity: Varies **Component:** rpc

Text: Cannot perform endpoint map operation

Explanation: The endpoint mapper was unable to perform an operation.

Action: None required.

0x16c9a0d2 ept_s_database_already_open

Severity: Varies **Component:** rpc

Text: Endpoint database already open by another process

Explanation: The endpoint mapper could not open the existing database file that holds the endpoint map because another process had the file locked.

Action: Make sure no other endpoint mapper is running on the same system.

0x16c9a0cf ept_s_database_invalid

Severity: Varies **Component:** rpc

Text: Invalid endpoint database

Explanation: The format of the database file that holds the endpoint map was not what the endpoint mapper expects.

Action: Delete the database file and restart the endpoint mapper.

0x16c9a0d5 ept_s_invalid_context

Severity: Varies **Component:** rpc

Text: Invalid endpoint map or lookup context

Explanation: A context handle supplied as input in a remote call to the endpoint mapper referred to invalid context. This may be an internal error.

Action: Report the error to your vendor.

0x16c9a0d3 ept_s_invalid_entry

Severity: Varies **Component:** rpc

Text: Invalid endpoint entry

Explanation: An entry supplied to the endpoint mapper as input contains invalid data, for example, an invalid tower.

Action: Correct the contents of the entry.

0x16c9a0ce ept_s_no_memory

Severity: Varies **Component:** rpc

Text: No memory for endpoint map service

Explanation: The endpoint mapper was unable to allocate heap storage.

Action: If the failure was caused by overuse of underlying system resources (for example, address space or swap space), reduce the direct use of these resources by other processes on the system if possible.

0x16c9a0d6 ept_s_not_registered

Severity: Varies **Component:** rpc

Text: Not registered in endpoint map

Explanation: An entry supplied as input to a remote call to the endpoint mapper (for example, for deletion) does not exist in the endpoint map.

Action: Supply only existing entries when deleting.

0x16c9a0d4 ept_s_update_failed

Severity: Varies **Component:** rpc

Text: Cannot update endpoint database

Explanation: The endpoint mapper was unable to write modifications to the database file that holds the endpoint map.

Action: Check the permissions on the database file.

———— ERANGE

Severity: Error **Component:** Threads

Text: Result too large

Explanation: An attempt was made to set the priority for a thread, but the value falls outside the range of minimum to maximum. This error might also occur if an attempt is made to set the *kind* parameter in the **pthread_mutexattr_setkind_np**.

Action: Priority depends on the scheduling policy, which can be one of the following:

- Other
- First in, first out
- Round Robin
- Foreground
- Background

The priority range for each of the policies is as follows:

- **RI_OTHER_MIN** \leq *priority* \leq **PRI_OTHER_MAX**
- **RI_FIFO_MIN** \leq *priority* \leq **PRI_FIFO_MAX**
- **RI_RR_MIN** \leq *priority* \leq **PRI_RR_MAX**
- **RI_FG_MIN_NP** \leq *priority* \leq **PRI_FG_MAX_NP**
- **RI_BG_MIN_NP** \leq *priority* \leq **PRI_BG_MAX_NP**

You need to specify the priority using the syntax for your programming language. The following specifies a priority midway between the minimum and maximum for the Round Robin policy:

```
pri_rr_mid= (PRI_RR_MIN + PRI_RR_MAX) / 2
```

The default value is the midpoint between **PRI_OTHER_MIN** and **PRI_OTHER_MAX**.

If the error is returned for **pthread_mutexattr_setkind_no**, then the value for *kind* must be one of the following:

- **MUTEX_FAST_NP** (default)
- **MUTEX_RECURSIVE_NP**
- **MUTEX_NONRECURSIVE**

——— ESRCH

Severity: Error **Component:** Threads

Text: No such thread

Explanation: The specified thread does not refer to a currently existing thread. This error can be returned for the following routines:

- **pthread_cancel**
- **pthread_join**
- **pthread_detach**
- **pthread_getprio**
- **pthread_getscheduler**
- **pthread_setprio**
- **pthread_setscheduler**

Action: Correct the thread parameter by naming an existing thread. If the error occurs for **pthread_join**, the thread may have been detached, which marks it for deallocation. A detached thread cannot be joined.

0x177db029 exc_s_accerr

Severity: Error **Component:** thd/thd_svc_general

Text: An invalid permissions exception has been raised

Explanation: The application has attempted to perform some operation for which the principal under which it is executing has insufficient permissions.

Action: Contact the vendor from whom the application was obtained.

0x177db02a exc_s_adraln

Severity: Error **Component:** thd/thd_svc_general

Text: An invalid address alignment exception has been raised

Explanation: The application has made a reference to an unaligned address. The exact nature of this error is generally hardware dependent.

Action: Contact the vendor from whom the application was obtained.

0x177db02b exc_s_adrerr

Severity: Error **Component:** thd/thd_svc_general

Text: A Non-existent physical address exception has been raised

Explanation: The application has referenced a physical address that does not exist. If the application is making to references to physical memory then the operating system has failed to map a virtual address properly.

Action: Contact the vendor from whom the application was obtained.

0x177db011 exc_s_aritherr

Severity: Error **Component:** thd/thd_svc_general

Text: An arithmetic trap exception has been raised

Explanation: The application attempted an illegal arithmetic operation. An example of this type of operation is divide by zero.

Action: Contact the vendor from whom the application was obtained.

0x177db024 exc_s_badstk

Severity: Error **Component:** thd/thd_svc_general

Text: A bad stack exception has been raised

Explanation: A corrupted stack has been detected. The exact nature of the problem may be system dependent.

Action: Contact the vendor from whom the application was obtained.

0x177db025 exc_s_brkpt

Severity: Error **Component:** thd/thd_svc_general

Text: A process breakpoint exception has been raised

Explanation: An unhandled breakpoint event has occurred. Such events are generally scheduled only by debuggers.

Action: Contact the vendor from whom the application was obtained.

0x177db023 exc_s_coproc

Severity: Error **Component:** thd/thd_svc_general

Text: A co-processor exception has been raised

Explanation: A co-processor raised an exception. The exact nature of the exception is hardware dependent.

Action: Contact the vendor from whom the application was obtained.

0x177db01b exc_s_decovf

Severity: Error **Component:** thd/thd_svc_general

Text: A decimal point overflow exception has been raised

Explanation: The application has attempted an operation which would result in a decimal data type being assigned a value greater than the maximum allowed for such a type. The maximum is system dependent.

Action: Contact the vendor from whom the application was obtained.

0x177db001 exc_s_exception

Severity: Error **Component:** thd/thd_svc_general

Text: An address exception has occurred

Explanation: The program referenced an address that was either not mapped or protected against write.

Action: Contact the vendor from whom the application was obtained.

0x177db014 exc_s_excpu

Severity: Error **Component:** thd/thd_svc_general

Text: A CPU-time limit exception has been raised

Explanation: The application has exceeded its allowed CPU time limit.

Action: Contact your system administrator.

0x177db015 exc_s_exflsiz

Severity: Error **Component:** thd/thd_svc_general

Text: A File size limit exception has been raised

Explanation: The application has exceeded its allowed file size limit.

Action: Contact your system administrator.

0x177db006 exc_s_exquota

Severity: Error **Component:** thd/thd_svc_general

Text: An insufficient quota exception has been raised

Explanation: The application exceeded a system defined quota.

Action: Contact your system administrator.

0x177db019 exc_s_fltdiv

Severity: Error **Component:** thd/thd_svc_general

Text: A floating point divide by zero exception has been raised

Explanation: The application has attempted a floating point divide operation whose denominator is zero. The minimum is system dependent.

Action: Contact the vendor from whom the application was obtained.

0x177db027 exc_s_fltinv

Severity: Error **Component:** thd/thd_svc_general

Text: An invalid floating point operation exception has been raised

Explanation: The application attempted to execute a floating point operation which is not valid on the processor on which it is executing.

Action: Contact the vendor from whom the application was obtained.

0x177db018 exc_s_fltovf

Severity: Error **Component:** thd/thd_svc_general

Text: A floating point overflow exception has been raised

Explanation: The application has attempted an operation which would result in an floating point data type being assigned value greater than the maximum allowed for such a type. The maximum is system dependent.

Action: Contact the vendor from whom the application was obtained.

0x177db02d exc_s_fltres

Severity: Error **Component:** thd/thd_svc_general

Text: SVR4 TBD

Explanation: explanation TBD

Action: action TBD

0x177db01a exc_s_ftund

Severity: Error **Component:** thd/thd_svc_general

Text: A floating point overflow exception has been raised

Explanation: The application has attempted an operation which would result in a floating point data type being assigned a value smaller than the minimum allowed for such a type. The minimum is system dependent.

Action: Contact the vendor from whom the application was obtained.

0x177db005 exc_s_illaddr

Severity: Error **Component:** thd/thd_svc_general

Text: An invalid address exception has been raised

Explanation: The program referenced an address that was either not mapped or protected against modification.

Action: Contact the vendor from whom the application was obtained.

0x177db01f exc_s_illadr

Severity: Error **Component:** thd/thd_svc_general

Text: An illegal operand exception has been raised

Explanation: In general this error indicates that the application attempted to execute a hardware instruction containing an addressing mode that is not valid for the processor it is executing on. Its exact nature is hardware dependent.

Action: Contact the vendor from whom the application was obtained.

0x177db00a exc_s_illinstr

Severity: Error **Component:** thd/thd_svc_general

Text: An illegal instruction exception has been raised

Explanation: In general this error indicates that the program executing a hardware instruction that is not valid for the processor on which it is executing. Its exact nature is hardware dependent.

Action: Contact the vendor from whom the application was obtained.

0x177db01d exc_s_illopc

Severity: Error **Component:** thd/thd_svc_general

Text: An illegal opcode exception has been raised

Explanation: In general this error indicates that the application executed an hardware opcode that is not valid for the processor it is executing on. Its exact nature is hardware dependent.

Action: Contact the vendor from whom the application was obtained.

0x177db01e exc_s_illopn

Severity: Error **Component:** thd/thd_svc_general

Text: An illegal operand exception has been raised

Explanation: In general this error indicates that the application executed an hardware opcode that is not valid for the processor it is executing on. Its exact nature is hardware dependent.

Action: Contact the vendor from whom the application was obtained.

0x177db020 exc_s_illtrp

Severity: Error **Component:** thd/thd_svc_general

Text: An illegal trap exception has been raised

Explanation: The application attempted to execute a trap instruction that is not valid on the processor on the processor on which it is running. This usually means the application attempted an illegal privilege transition.

Action: Contact the vendor from whom the application was obtained.

0x177db007 exc_s_insfmem

Severity: Error **Component:** thd/thd_svc_general

Text: An insufficient memory exception has been raised

Explanation: The application either exceeded its memory limnitation or the system has exhausted it virtual memory.

Action: Contact your system administrator.

0x177db017 exc_s_intdiv

Severity: Error **Component:** thd/thd_svc_general

Text: An integer divide by zero exception has been raised

Explanation: The application has attempted an interger devide operation whose denominator is zero.

Action: Contact the vendor from whom the application was obtained.

0x177db016 exc_s_intovf

Severity: Error **Component:** thd/thd_svc_general

Text: An interger overflow exception has been raised

Explanation: The application has attempted an aperation which would result in aninterger data type being assigned value greater than the maximum allowed for such a type. The maximum is system dependent.

Action: Contact the vendor from whom the application was obtained.

0x177db028 exc_s_maperr

Severity: Error **Component:** thd/thd_svc_general

Text: A address not mapped to object exception has been raised

Explanation: The application referenced an address that has not been mapped.

Action: Contact the vendor from whom the application was obtained.

0x177db008 exc_s_nopriv

Severity: Error **Component:** thd/thd_svc_general

Text: An insufficent privilege exception has been raised

Explanation: The application attempted an operation which requires permissions that have not been granted to the principal under it is executing.

Action: Contact your system administrator.

0x177db009 exc_s_normal

Severity: Error **Component:** thd/thd_svc_general

Text: Process has completed normally.

Explanation: The application has completed its execution without error

Action: None

0x177db02c exc_s_objerr

Severity: Error **Component:** thd/thd_svc_general

Text: An object specific exception has been raised

Explanation: This is a strictly platform dependent error condition.

Action: Contact the vendor from whom the application was obtained.

0x177db00c exc_s_privinst

Severity: Error **Component:** thd/thd_svc_general

Text: A privileged instruction exception has been raised

Explanation: The application attempted to execute an instruction that is reserved for operating system use. The exact nature of this error may be system dependent

Action: Contact your system administrator.

0x177db021 exc_s_prvopc

Severity: Error **Component:** thd/thd_svc_general

Text: A privileged opcode exception has been raised

Explanation: The application attempted to execute an opcode which is reserved for operating system use. Its exact nature is system dependent.

Action: Contact the vendor from whom the application was obtained.

0x177db022 exc_s_privreg

Severity: Error **Component:** thd/thd_svc_general

Text: A Privileged register exception has been raised

Explanation: The application attempted referenced a register which is reserved for operating system use.

Action: Contact the vendor from whom the application was obtained.

0x177db00b exc_s_resaddr

Severity: Error **Component:** thd/thd_svc_general

Text: A reserved addressing exception has been raised

Explanation: The application has referenced an address that is reserved for operation system use. The exact nature of this error may be system dependent.

Action: Contact your system administrator.

0x177db00d exc_s_resoper

Severity: Error **Component:** thd/thd_svc_general

Text: A reserved operand exception has been raised

Explanation: The application referenced an an operand which is reserved for operating system use. The exact nature of this error may be system dependent.

Action: Contact your system administrator.

0x177db010 exc_s_SIGEMT

Severity: Error **Component:** thd/thd_svc_general

Text: An emulation trap exception has been raised

Explanation: This is s system dependent error condition.

Action: Contact your system administrator.

0x177db00f exc_s_SIGIOT

Severity: Error **Component:** thd/thd_svc_general

Text: An IOT exception has been raised

Explanation: An unhandled input output trap has occurred.

Action: Contact the vendor from whom the application was obtained.

0x177db013 exc_s_SIGPIPE

Severity: Error **Component:** thd/thd_svc_general

Text: A broken pipe exception has been raised

Explanation: An unhandled broken pipe signal has occurred.

Action: Contact the vendor from whom the application was obtained.

0x177db012 exc_s_SIGSYS

Severity: Error **Component:** thd/thd_svc_general

Text: A bad system call exception has been raised

Explanation: The application requested a service that is not offered by the operating system.

Action: Contact the vendor from whom the application was obtained.

0x177db00e exc_s_SIGTRAP

Severity: Error **Component:** thd/thd_svc_general

Text: A trace or breakpoint exception has been raised

Explanation: An unhandled trace or breakpoint event has occurred. Such events are generally scheduled only by debuggers.

Action: Contact your system administrator.

0x177db01c exc_s_subrng

Severity: Error **Component:** thd/thd_svc_general

Text: A subscript out of range exception has been raised

Explanation: The application referenced an array data type through subscript that was larger than the maximum allowed by the memory allocated for the array.

Action: Contact the vendor from whom the application was obtained.

0x177db026 exc_s_trace

Severity: Error **Component:** thd/thd_svc_general

Text: A process trace exception has been raised

Explanation: An unhandled trace event has occurred. Such events are generally scheduled only by debuggers.

Action: Contact the vendor from whom the application was obtained.

0x177db003 exc_s_uninitexc

Severity: Error **Component:** thd/thd_svc_general

Text: An uninitialized exception has been raised

Explanation: The application raised an exception whose data was not properly initialized

Action: Contact the vendor from whom the application was obtained.

0x1260ad29 gc_i_ambiguous_operation

Severity: Warning **Component:** gds/GDS_S_CP

Text: Ambiguous operation %s.

Explanation: The short name specified for the operation could not be expanded to a unique operation name.

Action: Specify the operation name such that it expands to a unique name.

0x1260ad1f gc_i_cannot_open_dir

Severity: Warning **Component:** gds/GDS_S_CP

Text: Cannot open directory <%s>.\n

Explanation: The user-specified directory in the environment variable could not be opened.

Action: Ensure that the directory exists with the proper access permissions and try again.

0x1260ad2a gc_i_cannot_unset_var

Severity: Warning **Component:** gds/GDS_S_CP

Text: Error: Cannot unset %s.

Explanation: An attempt was made to to unset a reserved **gdscp** variable.

Action: Do not attempt to do this.

0x1260ad20 gc_i_file_does_not_exist

Severity: Warning **Component:** gds/GDS_S_CP

Text: gdscp: File %s does not exist.\n

Explanation: The file name specified as the **gdscp** argument does not exist.

Action: Ensure that the file exists with the proper access permissions and try again.

0x1260ad21 gc_i_incorrect_usage

Severity: Fatal **Component:** gds/GDS_S_CP

Text: gdscp: Incorrect usage.\n

Explanation: **gdscp** was invoked with invalid arguments.

Action: Invoke **gdscp** again with the valid arguments.

0x1260ad26 gc_i_invalid_argument

Severity: Warning **Component:** gds/GDS_S_CP

Text: Invalid argument \"%s\".

Explanation: The argument specified for the operation had an invalid value.

Action: Correct the input and try again.

0x1260ad28 gc_i_missing_operation

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing operation.

Explanation: The operation to be performed on the object was not specified.

Action: Specify a valid operation for the object and try again.

0x1260ad27 gc_i_unknown_operation

Severity: Warning **Component:** gds/GDS_S_CP

Text: Unknown operation \"%s\".

Explanation: An unknown operation was specified for the object.

Action: Specify a valid operation for the object and try again.

0x1260ad1e gc_i_warning_file_eval

Severity: Warning **Component:** gds/GDS_S_CP

Text: File <%s> not completely evaluated : %s.\n

Explanation: An error was encountered in the user-customized **.gdscprc** file or the script files in the user-specified directory.

Action: Correct the error in the script files and try again.

0x1260ad06 gc_t_admin_limit_exceeded

Severity: Warning **Component:** gds/GDS_S_CP

Text: The administrative limit has been reached.

Explanation: The administrative limit of the directory installation has been reached.

Action: Contact your system administrator.

0x1260ad02 gc_t_ambiguous_option

Severity: Warning **Component:** gds/GDS_S_CP

Text: Ambiguous option %s.

Explanation: The short name specified for the option could not be expanded to a unique option name.

Action: Specify the option name such that it expands to a unique name for that operation.

0x1260acf9 gc_t_bind_not_made

Severity: Warning **Component:** gds/GDS_S_CP

Text: Perform bind operation first.

Explanation: Before this operation can be performed, a **bind** operation to the Directory Service Agent (DSA) must be performed.

Action: Perform the **bind** operation and retry.

0x1260acf8 gc_t_cannot_initialize_workspace

Severity: Warning **Component:** gds/GDS_S_CP

Text: Unable to initialize workspace.

Explanation: At the C interface, the XOM workspace was not initialized.

Action: This is an internal XOM error. Contact your system administrator.

0x1260ace4 gc_t_conflicting_option

Severity: Warning **Component:** gds/GDS_S_CP

Text: Conflicting option \"%s\".

Explanation: The specified option conflicts with a previously specified option.

Action: Remove the undesired option and try again.

0x1260acff gc_t_entry_not_found

Severity: Warning **Component:** gds/GDS_S_CP

Text: Entry not found.

Explanation: No entry was found in the Directory Service Agent that matches the criteria specified in the **search** operation.

Action: Verify the search parameters and try again.

0x1260acfb gc_t_format_error

Severity: Warning **Component:** gds/GDS_S_CP

Text: Format error - %s.

Explanation: The user-specified value in the string does not conform to the defined syntax.

Action: If the value has been specified within quotes ('), make sure that there are no extra characters after the closing quote. If hexadecimal values are specified, make sure that the format \"%\\xnn\" is used, where \"nn\" is a valid hexadecimal value.

0x1260ad0b gc_t_incomplete_referral_returned

Severity: Warning **Component:** gds/GDS_S_CP

Text: Incomplete operation - Referral returned : %s.\n

Explanation: The Directory Service has returned the name of a referral Directory Service Agent (DSA) along with the partial result.

Action: Set the service controls **-automaticcontinuation** to *TRUE* and **chainingprohibited** to *FALSE* so that referrals are processed automatically or bind to the referral DSA and perform the operation again.

0x1260acf4 gc_t_invalid_directory_id

Severity: Warning **Component:** gds/GDS_S_CP

Text: Invalid directory identifier \"%s\".

Explanation: An invalid *directory identifier* was specified in the **bind** operation.

Action: Specify a valid *directory identifier* and try again.

0x1260acfd gc_t_invalid_parameter

Severity: Warning **Component:** gds/GDS_S_CP

Text: Invalid parameter passed as an argument.

Explanation: At the C interface, an invalid function argument was passed.

Action: This is an internal XOM error. Contact your system administrator.

0x1260acf6 gc_t_invalid_size_limit

Severity: Warning **Component:** gds/GDS_S_CP

Text: Invalid size limit \"%s\".

Explanation: An invalid *size limit* was specified.

Action: Specify a valid *size limit* indicating the number of entries to return and try again.

0x1260acf5 gc_t_invalid_time_limit

Severity: Warning **Component:** gds/GDS_S_CP

Text: Invalid time limit \"%s\".

Explanation: An invalid *time limit* was specified.

Action: Specify a valid *time limit* in seconds and try again.

0x1260ad01 gc_t_memory_insufficient

Severity: Warning **Component:** gds/GDS_S_CP

Text: Insufficient memory to perform operation.\n

Explanation: Insufficient memory to perform operation - Malloc failure.

Action: Contact your system administrator.

0x1260acfc gc_t_mismatched_quotes

Severity: Warning **Component:** gds/GDS_S_CP

Text: Mismatched quotes - %s.

Explanation: Closing quotes character not specified in the user string.

Action: Insert the closing quotes and try again.

0x1260acf3 gc_t_missing_arguments

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing arguments.

Explanation: Required arguments to the operation were not specified.

Action: Specify the arguments and try again.

0x1260ace9 gc_t_missing_attribute_info

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing attribute information.

Explanation: The *attribute information* was not specified for the operation.

Action: Specify the *attribute information* and try again.

0x1260ace7 gc_t_missing_authentication_type

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing authentication type.

Explanation: The *authentication type* has not been specified in the **bind** operation.

Action: Specify the *authentication type* and try again.

0x1260ace6 gc_t_missing_directory_id

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing directory identifier.

Explanation: The *directory identifier* has not been specified in the **bind** operation.

Action: Specify the *directory identifier* and try again.

0x1260aceb gc_t_missing_dsa_name

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing Directory Service Agent name.

Explanation: The Directory Service Agent (DSA) name was not specified in the **bind** operation.

Action: Specify the DSA name and try again.

0x1260acef gc_t_missing_filter

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing filter value.

Explanation: The *filter value* for the **search** operation was not specified after the option.

Action: Specify the *filter value* after the option and try again.

0x1260acea gc_t_missing_new_attribute_info

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing information for the new attribute values.

Explanation: The *new attribute values* in the **modify** operation was not specified.

Action: Specify the *new attribute values* and try again.

0x1260ace8 gc_t_missing_object_name

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing object name.

Explanation: The *object name* was not specified for the operation.

Action: Specify the *object name* and try again.

0x1260acec gc_t_missing_psap_address

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing Presentation Service Access Point address.

Explanation: The Presentation Service Access Point (PSAP) address of the Directory Service Agent was not specified in the **bind** operation.

Action: Specify the PSAP address and try again.

0x1260acf0 gc_t_missing_scope_of_search

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing scope of search.

Explanation: The scope of search was not specified in the **search** operation.

Action: Specify the scope of search and try again. The scope can be one of the following:

- baseobject** Scope is the base object only
- onelevel** Scope is all children of the baseobject
- subtree** Scope is the whole subtree of the base object

0x1260acf2 gc_t_missing_size_limit

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing size limit.

Explanation: The *size limit* was not specified.

Action: Specify the *size limit* and try again.

0x1260acf1 gc_t_missing_time_limit

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing time limit.

Explanation: The *time limit* was not specified.

Action: Specify the *time limit* and try again.

0x1260aced gc_t_missing_user_name

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing user name.

Explanation: The *user name* was not specified in the **bind** operation.

Action: Specify the *user name* and try again.

0x1260acee gc_t_missing_user_password

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing password.

Explanation: The *user password* was not specified in the **bind** operation.

Action: Specify the *user password* and try again.

0x1260acfa gc_t_missing_value

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing value.

Explanation: An option was specified without any accompanying value.

Action: Specify a valid value and try again.

0x1260ada1 gc_t_om_encoding_invalid

Severity: Warning **Component:** gds/GDS_S_CP

Text: Invalid encoded attribute.

Explanation: The octets that constitute the value of an encoding's object encoding attribute are invalid.

Action: This is an internal XOM error. Contact your system administrator.

0x1260ada2 gc_t_om_function_declined

Severity: Warning **Component:** gds/GDS_S_CP

Text: The function does not apply to the object to which it is addressed.

Explanation: At the C interface, a wrong function was being applied to the object.

Action: This is an internal XOM error. Contact your system administrator.

0x1260ada3 gc_t_om_function_interrupted

Severity: Warning **Component:** gds/GDS_S_CP

Text: The function was aborted by an external force.

Explanation: The function was aborted by an external force such as a user interrupt.

Action: No action required. If you wish to continue, retry the operation.

0x1260ada4 gc_t_om_memory_insufficient

Severity: Warning **Component:** gds/GDS_S_CP

Text: Insufficient memory to perform operation.

Explanation: Insufficient memory to perform operation - Malloc failure.

Action: Contact your system administrator.

0x1260ada5 gc_t_om_network_error

Severity: Warning **Component:** gds/GDS_S_CP

Text: Could not employ the services of the network.

Explanation: Could not employ the services of the network upon which the implementation depends.

Action: Contact your system administrator.

0x1260ada6 gc_t_om_no_such_class

Severity: Warning **Component:** gds/GDS_S_CP

Text: The class identifier is undefined.

Explanation: At the C interface, an invalid class identifier was used.

Action: This is an internal XOM error. Contact your system administrator.

0x1260ada7 gc_t_om_no_such_exclusion

Severity: Warning **Component:** gds/GDS_S_CP

Text: The exclusion identifier is undefined.

Explanation: At the C interface, an invalid exclusion identifier was used.

Action: This is an internal XOM error. Contact your system administrator.

0x1260ada8 gc_t_om_no_such_modification

Severity: Warning **Component:** gds/GDS_S_CP

Text: The modification identifier is undefined.

Explanation: At the C interface, an invalid modification identifier was used.

Action: This is an internal XOM error. Contact your system administrator.

0x1260ada9 gc_t_om_no_such_object

Severity: Warning **Component:** gds/GDS_S_CP

Text: The object is nonexistent or the handle is invalid.

Explanation: At the C interface, an invalid object was used.

Action: This is an internal XOM error. Contact your system administrator.

0x1260adaa gc_t_om_no_such_rules

Severity: Warning **Component:** gds/GDS_S_CP

Text: The rule identifier is undefined.

Explanation: At the C interface, an invalid rule identifier was used.

Action: This is an internal XOM error. Contact your system administrator.

0x1260adab gc_t_om_no_such_syntax

Severity: Warning **Component:** gds/GDS_S_CP

Text: The syntax identifier is undefined.

Explanation: At the C interface, an invalid syntax identifier was used.

Action: This is an internal XOM error. Contact your system administrator.

0x1260adac gc_t_om_no_such_type

Severity: Warning **Component:** gds/GDS_S_CP

Text: The type identifier is undefined.

Explanation: At the C interface, an invalid type identifier was used.

Action: This is an internal XOM error. Contact your system administrator.

0x1260adad gc_t_om_no_such_workspace

Severity: Warning **Component:** gds/GDS_S_CP

Text: The workspace is nonexistent.

Explanation: At the C interface, an invalid workspace was used.

Action: This is an internal XOM error. Contact your system administrator.

0x1260adae gc_t_om_not_an_encoding

Severity: Warning **Component:** gds/GDS_S_CP

Text: The object is not an instance of the encoding class.

Explanation: At the C interface, an invalid encoding was used.

Action: This is an internal XOM error. Contact your system administrator.

0x1260adaf gc_t_om_not_concrete

Severity: Warning **Component:** gds/GDS_S_CP

Text: The class is abstract and not a concrete class.

Explanation: At the C interface, an abstract class was used.

Action: This is an internal XOM error. Contact your system administrator.

0x1260adb0 gc_t_om_not_present

Severity: Warning **Component:** gds/GDS_S_CP

Text: An attribute value is absent.

Explanation: The attribute value was not specified.

Action: Specify the attribute value and try again.

0x1260adb1 gc_t_om_not_private

Severity: Warning **Component:** gds/GDS_S_CP

Text: The object is public and not private.

Explanation: At the C interface, a public object was used in place of a private object.

Action: This is an internal XOM error. Contact your system administrator.

0x1260adb2 gc_t_om_not_the_services

Severity: Warning **Component:** gds/GDS_S_CP

Text: The object is client-generated, rather than service-generated or private.

Explanation: At the C interface, a client-generated object was used in place of a service-generated object.

Action: This is an internal XOM error. Contact your system administrator.

0x1260adb3 gc_t_om_permanent_error

Severity: Warning **Component:** gds/GDS_S_CP

Text: Some permanent difficulty encountered.

Explanation: The service encountered a permanent difficulty other than those denoted by other return codes.

Action: This is an internal XOM error. Contact your system administrator.

0x1260adb4 gc_t_om_pointer_invalid

Severity: Warning **Component:** gds/GDS_S_CP

Text: An invalid pointer supplied as a function argument.

Explanation: At the C interface, an invalid pointer was supplied as a function argument or as the receptacle for a function result.

Action: This is an internal XOM error. Contact your system administrator.

0x1260adb5 gc_t_om_system_error

Severity: Warning **Component:** gds/GDS_S_CP

Text: Could not employ the services of the operating system.

Explanation: The service could not successfully employ the operating system upon which its implementation depends.

Action: Contact your system administrator.

0x1260adb6 gc_t_om_temporary_error

Severity: Warning **Component:** gds/GDS_S_CP

Text: Temporary difficulty encountered.

Explanation: The service encountered a temporary difficulty other than those denoted by other return codes.

Action: Contact your system administrator.

0x1260adb7 gc_t_om_too_many_values

Severity: Warning **Component:** gds/GDS_S_CP

Text: Too many attribute values.

Explanation: Too many attribute values were specified for the object.

Action: Reduce the number of values to the defined limit and try again.

0x1260adb8 gc_t_om_values_not_adjacent

Severity: Warning **Component:** gds/GDS_S_CP

Text: Value descriptors not adjacent.

Explanation: At the C interface, the object descriptors for the values of a particular attribute were not adjacent.

Action: This is an internal XOM error. Contact your system administrator.

0x1260adb9 gc_t_om_wrong_value_length

Severity: Warning **Component:** gds/GDS_S_CP

Text: The attribute value is too long.

Explanation: The length of the attribute value was too long.

Action: Correct the attribute value and try again.

0x1260adba gc_t_om_wrong_value_makeup

Severity: Warning **Component:** gds/GDS_S_CP

Text: The attribute value does not conform to the syntax.

Explanation: The specified attribute value does not conform to the syntax of the attribute.

Action: Correct the attribute value and try again.

0x1260adbb gc_t_om_wrong_value_number

Severity: Warning **Component:** gds/GDS_S_CP

Text: Too many attribute values.

Explanation: Too many attribute values were specified for the object.

Action: Reduce the number of values to the defined limit and try again.

0x1260adbc gc_t_om_wrong_value_position

Severity: Warning **Component:** gds/GDS_S_CP

Text: Invalid value position.

Explanation: At the C interface, the usage of value position identified in the argument of a function was invalid.

Action: This is an internal XOM error. Contact your system administrator.

0x1260adbd gc_t_om_wrong_value_syntax

Severity: Warning **Component:** gds/GDS_S_CP

Text: Attribute-value syntax not permitted.

Explanation: At the C interface, a wrong attribute-value was supplied.

Action: This is an internal XOM error. Contact your system administrator.

0x1260adbe gc_t_om_wrong_value_type

Severity: Warning **Component:** gds/GDS_S_CP

Text: Undefined attribute type for the object.

Explanation: At the C interface, an object had an undefined attribute type.

Action: This is an internal XOM error. Contact your system administrator.

0x1260ad7a gc_t_omx_attr_format_error

Severity: Warning **Component:** gds/GDS_S_CP

Text: Format error in the Attribute Definition Block.

Explanation: A format error was encountered in the Attribute Definition Block while reading the XOM object information schema file.

Action: Correct the error and try again.

0x1260ad6e gc_t_omx_cannot_read_schema

Severity: Warning **Component:** gds/GDS_S_CP

Text: Unable to read the XOM object information schema file \"%s\".

Explanation: The XOM convenience library was unable to read the object information schema file.

Action: Check with your system administrator to determine if the schema file has been installed. If it has not been, the system administrator should install it.

0x1260ad83 gc_t_omx_class_block_undefined

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing OM Class Definition Block.

Explanation: An OM Class Definition Block was not specified for the particular OM Class in the XOM object information schema file.

Action: Correct the error and try again.

0x1260ad80 gc_t_omx_class_format_error

Severity: Warning **Component:** gds/GDS_S_CP

Text: Format error in the OM Class Definition Block.

Explanation: A format error was encountered in the OM Class Definition Block while reading the XOM object information schema file.

Action: Correct the error and try again.

0x1260adb f gc_t_omx_class_not_found_in_schema_file

Severity: Warning **Component:** gds/GDS_S_CP

Text: Class not found in the XOM object information schema file.

Explanation: The class identifier encountered in an object was not found in the XOM object info file.

Action: This is an internal XOM error. Contact your system administrator.

0x1260ad7b gc_t_omx_duplicate_attr_abbrev

Severity: Warning **Component:** gds/GDS_S_CP

Text: Duplicate Attribute abbreviations.

Explanation: The same abbreviation was used for different Attributes in the Attribute Definition Block of the XOM object information schema file.

Action: Since the same abbreviation cannot be used for different attributes, ensure that all abbreviations for attributes are unique and try again.

0x1260ad7c gc_t_omx_duplicate_attr_obj_id

Severity: Warning **Component:** gds/GDS_S_CP

Text: Duplicate Attribute Object Identifiers.

Explanation: The same object identifier was used for different Attributes in the Attribute Definition Block of the XOM object information schema file.

Action: Since the same object identifier cannot be used for different attributes, ensure that all object identifiers for attributes are unique and try again.

0x1260ad82 gc_t_omx_duplicate_class_block

Severity: Warning **Component:** gds/GDS_S_CP

Text: Duplicate OM Class Definition Blocks.

Explanation: Duplicate OM Class Definition Blocks were encountered while reading the XOM object information schema file.

Action: Since class blocks cannot be duplicated, ensure that all class blocks are unique and try again.

0x1260ad75 gc_t_omx_duplicate_obj_abbrev

Severity: Warning **Component:** gds/GDS_S_CP

Text: Duplicate Object Class Abbreviations.

Explanation: The same abbreviation was used for different Object Classes in the Object Class Definition Block of the XOM object information schema file.

Action: Since the same abbreviation cannot be used for different Object Classes, ensure that all abbreviations for object classes are unique and try again.

0x1260ad76 gc_t_omx_duplicate_obj_obj_id

Severity: Warning **Component:** gds/GDS_S_CP

Text: Duplicate Object Class Identifiers.

Explanation: The same object identifier was used for different Object Classes in the Object Class Definition Block of the XOM object information schema file.

Action: Since the same object identifier cannot be used for different Object Classes, ensure that all object identifiers are unique and try again.

0x1260ad79 gc_t_omx_empty_attr_block

Severity: Warning **Component:** gds/GDS_S_CP

Text: Empty Attribute Definition Block.

Explanation: An empty Attribute Definition Block was encountered while reading the XOM object information schema file.

Action: Correct the error and try again.

0x1260ad7f gc_t_omx_empty_class_block

Severity: Warning **Component:** gds/GDS_S_CP

Text: Empty OM Class Definition Block.

Explanation: An empty OM Class Definition Block was encountered while reading the XOM object information schema file.

Action: Correct the error and try again.

0x1260ad73 gc_t_omx_empty_obj_block

Severity: Warning **Component:** gds/GDS_S_CP

Text: Empty Object Class Definition Block.

Explanation: An empty Object Class Definition Block was encountered while reading the XOM object information schema file.

Action: Correct the error and try again.

0x1260ad8f gc_t_omx_format_error

Severity: Warning **Component:** gds/GDS_S_CP

Text: Format error - %s.

Explanation: The user-provided string does not conform to the syntax for the string.

Action: Correct the string and try again.

0x1260ad84 gc_t_omx_invalid_abbrev

Severity: Warning **Component:** gds/GDS_S_CP

Text: Invalid Abbreviation.

Explanation: The abbreviation encountered in the XOM object information schema file was not valid.

Action: An abbreviation begins with an alphabetic character which may be followed by zero or more alphanumeric characters. Correct the abbreviation and try again.

0x1260ad86 gc_t_omx_invalid_class_name

Severity: Warning **Component:** gds/GDS_S_CP

Text: Invalid Class Name.

Explanation: The OM Class name encountered in the XOM object information schema file cannot be handled by the convenience library.

Action: Correct the error and try again.

0x1260ad85 gc_t_omx_invalid_obj_id

Severity: Warning **Component:** gds/GDS_S_CP

Text: Invalid Object Identifier.

Explanation: The object identifier encountered in the XOM object information schema file was not valid.

Action: An object identifier consists of a series of digits separated by a period (.). Correct the object identifier and try again.

0x1260ad89 gc_t_omx_invalid_parameter

Severity: Warning **Component:** gds/GDS_S_CP

Text: Invalid parameter passed as an argument.

Explanation: At the C interface, an invalid function argument was passed.

Action: This is an internal error. Contact your system administrator.

0x1260ad87 gc_t_omx_invalid_syntax

Severity: Warning **Component:** gds/GDS_S_CP

Text: Invalid OM Syntax.

Explanation: An invalid OM syntax was encountered in the XOM object information schema file.

Action: Correct the error and try again.

0x1260ad88 gc_t_omx_memory_insufficient

Severity: Warning **Component:** gds/GDS_S_CP

Text: Insufficient memory to perform operation.

Explanation: Insufficient memory to perform operation - Malloc failure.

Action: Contact your system administrator.

0x1260ad9a gc_t_omx_mismatched_brackets

Severity: Warning **Component:** gds/GDS_S_CP

Text: Mismatched brackets - %s.

Explanation: Mismatched brackets encountered in the user-provided string.

Action: Make sure that all brackets are matched and try again.

0x1260ad92 gc_t_omx_mismatched_quotes

Severity: Warning **Component:** gds/GDS_S_CP

Text: Mismatched quotes - %s.

Explanation: Closing quotes character not specified in the user string.

Action: Insert the closing quotes and try again.

0x1260ad8e gc_t_omx_missing_abbrev

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing abbreviation - %s.

Explanation: The attribute abbreviation was not specified in the user-provided string.

Action: Specify the attribute abbreviation and try again.

0x1260ad95 gc_t_omx_missing_attr_info

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing attribute information - %s.

Explanation: The attribute type and value was missing in the user-provided string.

Action: Reenter the string, using the following format: *attribute-type = attribute-value..*

0x1260ad94 gc_t_omx_missing_attr_value

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing attribute value - %s.

Explanation: The attribute value was missing in the user-provided string.

Action: Reenter the string, providing an attribute value.

0x1260ad8d gc_t_omx_missing_ava

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing Attribute Value Assertion - %s.

Explanation: The Attribute Value Assertion (AVA) was not specified in the user-provided Distinguished Name string.

Action: Specify the AVA and try again.

0x1260ad97 gc_t_omx_missing_class_end_op

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing end of class block operator - %s.

Explanation: The end of class block operator used to indicate the end of a structured class was missing in the user-provided string.

Action: Insert the operator (}) and try again.

0x1260ad96 gc_t_omx_missing_class_start_op

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing start of class block operator - %s.

Explanation: The start of class block operator used to indicate the start of a structured class was missing in the user provided string.

Action: Insert the operator ({} and try again.

0x1260ad98 gc_t_omx_missing_class_value

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing class value - %s.

Explanation: An empty class block was encountered in the user-provided string.

Action: Specify the class value and try again.

0x1260ad9f gc_t_omx_missing_compound_op

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing compound operator - %s.

Explanation: A compound operator was not specified in the user-provided string where it was expected.

Action: Specify the required compound operator (&& or ||) and try again.

0x1260ad99 gc_t_omx_missing_comp_value

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing component value - %s.

Explanation: The component value of the class was not provided in the user-provided string.

Action: Specify the component value and try again.

0x1260ad93 gc_t_omx_missing_equal_operator

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing equal operator - %s.

Explanation: The equality operator, separating the attribute type and value, was missing in the user-provided string.

Action: Insert the equality operator and try again.

0x1260ad9e gc_t_omx_missing_operator

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing operator - %s.

Explanation: The operator separating the attribute-type and the attribute-value was not specified in the user-provided string.

Action: Insert the operator ~("\\"=\", \">\" or \"<\") and try again.

0x1260ad91 gc_t_omx_missing_rdn_delimiter

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing Relative Distinguished Name delimiter - %s.

Explanation: The Relative Distinguished Name (RDN) delimiter was missing in the user-provided Distinguished Name string.

Action: Insert the RDN delimiter (/) and try again.

0x1260ad81 gc_t_omx_no_class_name

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing OM Class Name.

Explanation: The Class Name was not specified in the OM Class Definition Block of the XOM object information schema file.

Action: Correct the error and try again.

0x1260ad78 gc_t_omx_no_end_attr_block

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing end of Attribute Definition Block.

Explanation: The end of Attribute Definition Block was missing in the XOM object information schema file.

Action: Correct the error and try again.

0x1260ad7e gc_t_omx_no_end_class_block

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing end of OM Class Definition Block.

Explanation: End of OM Class Definition Block was missing in the XOM object information schema file.

Action: Correct the error and try again.

0x1260ad72 gc_t_omx_no_end_obj_block

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing end of Object Class Definition Block.

Explanation: The end of Object Class Definition Block was missing in the XOM object information schema file.

Action: Correct the error and try again.

0x1260ad77 gc_t_omx_no_start_attr_block

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing start of Attribute Definition Block.

Explanation: The start of Attribute Definition Block was missing in the XOM object information schema file.

Action: Correct the error and try again.

0x1260ad7d gc_t_omx_no_start_class_block

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing start of OM Class Definition Block.

Explanation: Start of OM Class Definition Block was missing in the XOM object information schema file.

Action: Correct the error and try again.

0x1260ad71 gc_t_omx_no_start_obj_block

Severity: Warning **Component:** gds/GDS_S_CP

Text: Missing start of Object Class Definition Block.

Explanation: The start of Object Class Definition Block was missing in the XOM object information schema file.

Action: Correct the error and try again.

0x1260ad74 gc_t_omx_obj_format_error

Severity: Warning **Component:** gds/GDS_S_CP

Text: Format error in the Object Class Definition Block.

Explanation: A format error was encountered in the Object Class Definition Block while reading the XOM object information schema file.

Action: Correct the error and try again.

0x1260ad6f gc_t_omx_schema_not_read

Severity: Warning **Component:** gds/GDS_S_CP

Text: XOM object information schema file not read.

Explanation: There maybe an error in the XOM object information schema file.

Action: Check with your system administrator.

0x1260ad9b gc_t_omx_unexpected_operator

Severity: Warning **Component:** gds/GDS_S_CP

Text: Unexpected operator - %s.

Explanation: A reserved operator character was encountered in the user-provided string where it was not expected.

Action: Correct the string and try again.

0x1260ad8a gc_t_omx_unknown_abbrev

Severity: Warning **Component:** gds/GDS_S_CP

Text: Abbreviation unknown - %s.

Explanation: The attribute abbreviation specified by the user was unknown to the XOM convenience library.

Action: Look in the XOM object information schema file for the correct abbreviation.

0x1260ad90 gc_t_omx_unknown_error

Severity: Warning **Component:** gds/GDS_S_CP

Text: Unknown error returned by the XOM convenience library.

Explanation: At the C interface to the XOM convenience library, an unknown error was encountered.

Action: This is an internal error. Contact your system administrator.

0x1260ad9d gc_t_omx_unknown_keyword

Severity: Warning **Component:** gds/GDS_S_CP

Text: Unknown keyword encountered - %s.

Explanation: An unknown keyword was encountered in the user-provided string.

Action: Correct the string and try again.

0x1260ad8b gc_t_omx_unknown_obj_id

Severity: Warning **Component:** gds/GDS_S_CP

Text: Unknown object identifier.

Explanation: The object identifier encountered at the C interface was unknown to the XOM convenience library.

Action: Contact your system administrator.

0x1260ad8c gc_t_omx_unknown_omtype

Severity: Warning **Component:** gds/GDS_S_CP

Text: Unknown OM type.

Explanation: The OM type encountered at the C interface was unknown to the XOM convenience library.

Action: Contact your system administrator.

0x1260ad9c gc_t_omx_wrong_value

Severity: Warning **Component:** gds/GDS_S_CP

Text: Invalid attribute value - %s.

Explanation: An invalid attribute value was specified in the user-provided string.

Action: Correct the string and try again.

0x1260ad0a gc_t_referral_returned

Severity: Warning **Component:** gds/GDS_S_CP

Text: Referral returned - %s.

Explanation: The Directory Service has returned the name of a referral Directory Service Agent (DSA) instead of the result.

Action: Set the service controls **-automaticcontinuation** to *TRUE* and **chainingprohibited** to *FALSE* so that referrals are processed automatically or bind to the referral DSA and perform the operation again.

0x1260ad07 gc_t_size_limit_exceeded

Severity: Warning **Component:** gds/GDS_S_CP

Text: Insufficient size limit.

Explanation: The *size limit* specified in the service controls was exceeded.

Action: Increase the *size limit* and try again.

0x1260ad00 gc_t_subordinates_not_found

Severity: Warning **Component:** gds/GDS_S_CP

Text: Subordinates not found.

Explanation: No subordinates were found for the specified **object** in the **list** operation.

Action: Verify the specified **object** and try again.

0x1260ad08 gc_t_time_limit_exceeded

Severity: Warning **Component:** gds/GDS_S_CP

Text: Insufficient time limit.

Explanation: The *time limit* specified in the service controls was exceeded.

Action: Increase the *time limit* and try again.

0x1260acfe gc_t_too_many_arguments

Severity: Warning **Component:** gds/GDS_S_CP

Text: Too many arguments.

Explanation: Too many arguments were specified for the operation.

Action: Specify the right number of arguments and try again.

0x1260ad03 gc_t_too_many_values

Severity: Warning **Component:** gds/GDS_S_CP

Text: Too many values.

Explanation: Too many attribute values were specified for the operation.

Action: Specify only one value and try again.

0x1260ad09 gc_t_unavailable_crit_ext

Severity: Warning **Component:** gds/GDS_S_CP

Text: Critical service extension cannot be provided.

Explanation: Some part of the Directory Service could not provide a requested critical service extension.

Action: Contact your system administrator.

0x1260acf7 gc_t_unknown_argument

Severity: Warning **Component:** gds/GDS_S_CP

Text: Unknown argument \"%s\".

Explanation: An unknown argument was specified for the operation.

Action: Correct the input and try again.

0x1260ada0 gc_t_unknown_conv_lib_error

Severity: Warning **Component:** gds/GDS_S_CP

Text: Unknown error returned by the XOM convenience library.

Explanation: At the C interface to the XOM convenience library, an unknown error was encountered.

Action: This is an internal error. Contact your system administrator.

0x1260ad04 gc_t_unknown_gcp_error

Severity: Warning **Component:** gds/GDS_S_CP

Text: Unknown gdscp error.

Explanation: At the C interface for gdscp, an unknown error was encountered.

Action: This is an internal error. Contact your system administrator.

0x1260ace5 gc_t_unknown_option

Severity: Warning **Component:** gds/GDS_S_CP

Text: Unknown option \"%s\".

Explanation: An unknown option passed to the operation.

Action: Use a valid option defined for the operation and try again.

0x1260adc0 gc_t_unknown_xom_error

Severity: Warning **Component:** gds/GDS_S_CP

Text: Unknown error returned by XOM.

Explanation: At the C interface to the XOM library, an unknown error was encountered.

Action: This is an internal XOM error. Contact your system administrator.

0x1260a57b GDS_S_ACONTEXT_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: An unknown application context was detected (invalid context-ID = %d)

Explanation: Stub process could not detect a valid application context identifier (DAP, DSP)

Action: Evaluate the invalid context identifier. Report the problem to the responsible software engineer.

0x1260a8a1 GDS_S_ACQU_CRED_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Acquire credentials failed for auth. mech. %d, \nmessage from security interface: %s.\n

Explanation: The Directory Service Agent (DSA) could not acquire its own credentials for the specified authentication method. So the DSA cannot continue to work because the credentials are needed for performing bind and unbind operations. The following authentication mechanisms can appear:

- 2 = Simple Unprotected Authentication
- 5 = DCE Authentication

Action: Check whether the message which was supplied by the security interface can help. If DCE Authentication was used:

- Check whether there is an entry for this Directory Service Agent (DSA) in the DCE Registry and if, whether this entry is sufficient.
- Check whether the principal name of this DSA is the right one.
- Use the tool **rgy_edit** to correct the contents of the DCE Registry.
- Check whether the DCE security daemon is active.

0x1260aa96 GDS_S_ATSyntax_UNKNOWN

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Unknown attribute syntax %d.\n

Explanation: The Attribute Table (AT) of the administrated schema is in an illegal state. It contains an entry having an unknown attribute syntax.

Action: This problem may occur due to a change to the schema object by an application program, that did not use the schema administration of GDS. The error is fatal for **gdsgendb** but not for **gdsdsa**, which continues with the unchanged schema. No action required. The problem may also occur, when a corrupted database is restored. In this case it is fatal for the **gdsdsa**. A consistent database has to be restored in this case.

0x1260a58c GDS_S_ATTRFILE_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Can't read attribute description file

Explanation: Stub process was not able to read the attribute description file into memory

Action: Report the problem to the responsible software engineer.

0x1260aa9c GDS_S_BADAT_ENTRY

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The Attribute Table contains an incorrectly formatted entry: %s.\n

Explanation: The specified Attribute Table entry is formatted incorrectly.

Action: This problem may occur due to a change to the schema object by an application program, that did not use the schema administration of GDS. The error is fatal for **gdsgendb** but not for **gdsdsa**, which continues with the unchanged schema. No action required. The problem may also occur, when a corrupted database is restored. In this case it is fatal for the **gdsdsa**. A consistent database has to be restored in this case.

0x1260a8a0 GDS_S_BAD_DSACONF

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Bad specification %s in DSA configuration file.\n

Explanation: The Directory Service Agent (DSA) configuration file contains a bad specification.

Action: Either repair the DSA configuration file and restart the DSA, or accept the DSA using the default values for the configuration parameters.

0x1260aa9b GDS_S_BADOCT_ENTRY

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The Object Class Table contains an incorrectly formatted entry: %s.\n

Explanation: The specified Object Class Table entry is formatted incorrectly.

Action: This problem may occur due to a change to the schema object by an application program, that did not use the schema administration of GDS. The error is fatal for **gdsgendb** but not for **gdsdsa**, which continues with the unchanged schema. No action required. The problem may also occur, when a corrupted database is restored. In this case it is fatal for the **gdsdsa**. A consistent database has to be restored in this case.

0x1260a0ed GDS_S_BAD_ROUTE_SPEC

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: An illegal routing specification character %c was encountered.

Explanation: An attempt was made, to specify the routing with an illegal initialization character of the routing specification. Permitted characters are:

- **v** for debug routing.
- **w** for routing.

Action: Use a correct initialization character for the specification.

0x1260a89f GDS_S_BAD_SOUNDEX

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Active soundex algorithm: %s, Data are generated with soundex algorithm: %s.\n

Explanation: The Directory Service Agent (DSA) uses a soundex algorithm, that was not used to generate the data.

Action: Go offline and run gdschdb to regenerate the phonetical representations of the data.

0x1260aa9a GDS_S_BADSRT_ENTRY

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The Structure Rule Table contains an incorrectly formatted entry: %s.\n

Explanation: The specified Structure Rule Table entry is formatted incorrectly.

Action: This problem may occur due to a change to the schema object by an application program, that did not use the schema administration of GDS. The error is fatal for **gdsgendb** but not for **gdsdsa**, which continues with the unchanged schema. No action required. The problem may also occur, when a corrupted database is restored. In this case it is fatal for the **gdsdsa**. A consistent database has to be restored in this case.

0x1260a3f2 GDS_S_CACHE_BUFSZ_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: IPC-communication buffer too small

Explanation: The program was not able to write a message into an IPC-communication buffer. Normally, messages are fragmented if the message size exceeds the size of a communication buffer. But sometimes this fragmentation is done on a logical level and not on a byte level. Thus, this error occurs always, if the size of a logical unit exceeds the communication buffer size.

Action: The size of the IPC-communication buffer must be increased by means of the -l configuration parameter (see IPC configuration file).

0x1260a3eb GDS_S_CACHE_DESCR_SZ_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Wrong size of description file (size = %d, should be %d)

Explanation: The program has detected a wrong size of the description file. This could indicate a data inconsistency

Action: To determine the reason report the problem to the responsible software engineer. In the case of a data inconsistency, restore the database to regain a consistent state.

0x1260a3ec GDS_S_CACHE_HASH_SZ_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Wrong size of hash table file (size = %d, should be %d)

Explanation: The program has detected a wrong size of the hash table file. This could indicate a data inconsistency

Action: To determine the reason report the problem to the responsible software engineer. In the case of a data inconsistency, restore the database to regain a consistent state.

0x1260a402 GDS_S_CACHE_HSHFULL_ERR

Severity: Notice **Component:** gds/GDS_S_GENERAL

Text: Hash table is full for objects of storage class %d

Explanation: The program has detected a full hash table for objects of the specified storage class.

Action: Normally there is no action necessary, but if required, the DUA-cache can be reconfigured and the number of objects can be increased.

0x1260a3ef GDS_S_CACHE_INCONS_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Inconsistent cache data base

Explanation: The program has detected an inconsistent DUA-cache data base.

Action: To determine the reason report the problem to the responsible software engineer. Restore the database to regain a consistent state.

0x1260a3fa GDS_S_CACHE_INCONMSG_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Inconsistent IPC-message

Explanation: The program has detected an inconsistent IPC-request message.

Action: To determine the reason report the problem to the responsible software engineer.

0x1260a3ed GDS_S_CACHE_INFO_SZ_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Wrong size of object data (size = %d, should be %d)

Explanation: The program has detected a wrong size of the data block of an object. This could indicate a data inconsistency

Action: To determine the reason report the problem to the responsible software engineer. In the case of a data inconsistency, restore the database to regain a consistent state.

0x1260a3f4 GDS_S_CACHE_INFSZ_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: The size of a DUA-cache object entry exceeds the upper limit\n (entry size = %d, upper limit = %d)

Explanation: The program has detected a DUA-cache object of a size exceeding the upper (implementation) limit.

Action: No action possible.

0x1260a400 GDS_S_CACHE_INVATTRS_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Invalid attribute specification parameter in IPC-message.

Explanation: The program has detected an invalid attribute specification parameter in the IPC-request message.

Action: To determine the reason report the problem to the responsible software engineer.

0x1260a3fe GDS_S_CACHE_INVAVLEN_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Invalid size of an attribute value (length = %d, maximum = %d)

Explanation: The program has detected an invalid size of an attribute value.

Action: To determine the reason report the problem to the responsible software engineer.

0x1260a3f7 GDS_S_CACHE_INVDIRID_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Invalid directory identifier (directory-ID = %d)

Explanation: The program has detected an invalid directory identifier.

Action: To determine the reason report the problem to the responsible software engineer.

0x1260a401 GDS_S_CACHE_INVDNS_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Invalid distinguished name (DN) specification parameter in IPC-message.

Explanation: The program has detected an invalid DN specification parameter in the IPC-request message.

Action: To determine the reason report the problem to the responsible software engineer.

0x1260a3fc GDS_S_CACHE_INVFILT_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Invalid filter syntax (syntax = %d)

Explanation: The program has detected an invalid filter syntax.

Action: To determine the reason report the problem to the responsible software engineer.

0x1260a3fb GDS_S_CACHE_INVMATCH_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Invalid attribute matching rule (rule = %d)

Explanation: The program has detected an invalid attribute matching rule.

Action: To determine the reason report the problem to the responsible software engineer.

0x1260a3f9 GDS_S_CACHE_INVMSGTAG_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Invalid IPC-message tag (tag = %#x, should be %#x)

Explanation: The program has detected an invalid IPC-request message part.

Action: To determine the reason report the problem to the responsible software engineer.

0x1260a3fd GDS_S_CACHE_INVOIDLEN_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Invalid size of object identifier (length = %d, maximum = %d)

Explanation: The program has detected an invalid size of an object identifier.

Action: To determine the reason report the problem to the responsible software engineer.

0x1260a3f5 GDS_S_CACHE_INVRQ_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Invalid service request (operation-ID = %d)

Explanation: The program has detected an invalid service request.

Action: To determine the reason report the problem to the responsible software engineer.

0x1260a3ff GDS_S_CACHE_INVSLIM_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Invalid size limit parameter in IPC-message (limit = %d , should be %d or greater then %d)

Explanation: The program has detected an invalid size limit parameter in the IPC-request message.

Action: To determine the reason report the problem to the responsible software engineer.

0x1260a3f8 GDS_S_CACHE_INVSTC_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Invalid storage class parameter (storage class = %d)

Explanation: The program has detected an invalid storage class parameter.

Action: To determine the reason report the problem to the responsible software engineer.

0x1260a3f6 GDS_S_CACHE_INVVERS_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Invalid version number (version no. = %d)

Explanation: The program has detected an invalid version number.

Action: To determine the reason report the problem to the responsible software engineer.

0x1260a3ea GDS_S_CACHE_REORG_SZ_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Wrong size of reorganization file (size = %d, should be %d)

Explanation: The program has detected a wrong size of the reorganization file. This could indicate a data inconsistency

Action: To determine the reason report the problem to the responsible software engineer. In the case of a data inconsistency, restore the database to regain a consistent state.

0x1260a3f3 GDS_S_CACHE_REQSZ_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: The complete IPC-request message exceeds the upper limit\n (message size = %d, upper limit = %d)

Explanation: The program has detected an IPC-message size which exceeds the upper (implementation) limit.

Action: No action possible.

0x1260a3f0 GDS_S_CACHE_RESULT_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Can't send IPC-result message

Explanation: The program was not able to send an IPC-result message.

Action: To determine the reason report the IPC-problem to the responsible software engineer.

0x1260a3ee GDS_S_CACHE_VERSION_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Wrong version no. of cache data base (version = %s, should be %s)

Explanation: The program has detected a wrong version no. of the DUA- cache data base. This could indicate a data inconsistency

Action: To determine the reason report the problem to the responsible software engineer. In the case of a data inconsistency, restore the database to regain a consistent state.

0x1260a3f1 GDS_S_CACHE_WAITIN_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Can't receive IPC-request message

Explanation: The program was not able to receive an IPC-request message.

Action: To determine the reason report the IPC-problem to the responsible software engineer.

0x1260aa8e GDS_S_CBL_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Error while calculating the country bitlist.\n

Explanation: The database generation program **gdsgendb** could not generate the country bitlist.

Action: Check that the list of countries in the **conf** file meets the following requirements:

- The list must be enclosed in pound signs (#).
- A country name must have exactly two characters.
- A country name can contain only letters.

0x1260a0e7 GDS_S_CHILD_EXIT

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Normal child exit, status = %d.

Explanation: A child process has exited with the specified state.

Action: No action required.

0x1260a0e8 GDS_S_CHILD_SIGNAL

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Child process killed, signal = %d.

Explanation: A child process has been killed by the specified signal.

Action: No action required.

0x1260a0d4 GDS_S_CLOSE_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: File could not be closed, errno = %d.

Explanation: The program could not close a file. The severity level may vary depending on the context of the error.

Action: This problem should not occur and cannot be corrected by a user or system administrator. Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a579 GDS_S_CREAD_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Reading PSAP-address from DUA-cache failed (code = %d, class = %d, value = %d)

Explanation: Stub process could not read PSAP-address from DUA-cache

Action: Evaluate error values (code, class, value). Report the problem to the responsible software engineer.

0x1260a57a GDS_S_CREADMSG_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Reading PSAP-address from DUA-cache failed because of an inconsistent result message (invalid tag = 0x%x)

Explanation: Stub process could not read PSAP-address from DUA-cache

Action: Evaluate the invalid tag. Report the problem to the responsible software engineer.

0x1260a58d GDS_S_CUPJOB_QUEUE_FULL

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Too much cache update requests in the queue.

Explanation: The stub was not able to enter a cache update request in the queue. The cache update request is discarded therefore.

Action: Repeat the request at another time.

0x1260a89c GDS_S_DATAVERSION_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Wrong data version number for directory ID %d. Supported: From %d to %d. Found: %d.\n

Explanation: The Directory Service Agent for the specified Directory ID has found an unsupported data version number in the **dversion** file.

Action: Either restore the database with the expected data version number or run a migration program.

0x1260a0eb GDS_S_DBG_ROUTING_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: A call to `dce_svc_debug_routing` has failed, error status = %lx, routing specification = %s.

Explanation: The program could not set the serviceability debug routing according to the specification. The function has set the specified status.

Action: Look up the error status in `dcesvcmsg.h`. If it indicates a shortage of memory, you could try stopping other functions, perhaps applications. If this doesn't work, you will need to acquire more memory. If error status indicates a bad routing specification string, use a correct specification for the routing. A correct specification for debug routing must have the form *component:flags:how:where[:private]*. The *component* is the component name. The *flags* field is a comma-separated list of subcomponents and levels separated by a dot (.). It can also be an asterisk (*), indicating all subcomponents for that component. The *how* field must be **BINFILE** for the GDS. The *where* field is a filename, that may contain a **%ld** string, that is replaced by the process ID of the currently running process. The *private* field is optional. It is of the form *[dir_id,]gds_components..* *dir_id* is optional and specifies the directory ID for which the routing specification string is designated. *gds_components* is a comma separated list of components of the Global directory service. It must be one of the following:

- **monitor**
- **cache**
- **cstub**
- **sstub**
- **dsa**

0x1260a8d6 GDS_S_DB_INCONSISTENT

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: A database inconsistency was detected.

Explanation: An expected C-ISAM record was not found.

Action: To determine the reason report the problem to the responsible software engineer. Restore the database to regain a consistent state.

0x1260a3e8 GDS_S_ENTRYCACHE

Severity: Notice **Component:** gds/GDS_S_GENERAL

Text: Entry DUA-cache process

Explanation: DUA-cache process has been started

Action: No action !

0x1260a960 GDS_S_ENTRY_DAEMON

Severity: Notice **Component:** gds/GDS_S_GENERAL

Text: The gdsdaemon program for Directory ID %d has started.\n

Explanation: The shadow update program **gdsdaemon** for the specified Directory ID has started.

Action: No action required.

0x1260a898 GDS_S_ENTRYDSA

Severity: Notice **Component:** gds/GDS_S_GENERAL

Text: Entry DSA of Directory ID: %d.\n

Explanation: The Directory Service Agent for the specified Directory ID has been started.

Action: No action required.

0x1260aa8c GDS_S_ENTRY_GENDB

Severity: Notice **Component:** gds/GDS_S_GENERAL

Text: The gdsgendb program started.\n

Explanation: The database generation program **gdsgendb** started.

Action: No action required.

0x1260aa28 GDS_S_ENTRY_MKISS

Severity: Notice **Component:** gds/GDS_S_GENERAL

Text: The gdsmkiss program started.\n

Explanation: The schema object creation program **gdsmkiss** started.

Action: No action required.

0x1260ab54 GDS_S_ENTRY_MKUPD

Severity: Notice **Component:** gds/GDS_S_GENERAL

Text: The gdsmkupd program started.\n

Explanation: The master knowledge update program **gdsmkupd** started.

Action: No action required.

0x1260a44c GDS_S_ENTRYMONITOR

Severity: Notice **Component:** gds/GDS_S_IPC

Text: Entry monitor process

Explanation: Monitor process has been started

Action: No action !

0x1260a44e GDS_S_ENTRY_RPCSERVER

Severity: Notice **Component:** gds/GDS_S_IPC

Text: Entry monitor process (RPC-server for serviceability)

Explanation: RPC-server for serviceability has been started

Action: No action !

0x1260a578 GDS_S_ENTRYSTUB

Severity: Notice **Component:** gds/GDS_S_GENERAL

Text: Entry Stub of Directory ID: %d

Explanation: Stub process for the specified Directory ID has been started

Action: No action !

0x1260aaf0 GDS_S_ENTRY_TRANSFER

Severity: Notice **Component:** gds/GDS_S_GENERAL

Text: The gdstransfer started.\n

Explanation: The database transfer program **gdstransfer** started.

Action: No action required.

0x1260a191 GDS_S_ENVVAR_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: An environment variable %s is missing.

Explanation: The program could not read the specified environment variable.

Action: Set the specified environment variable.

0x1260a0e9 GDS_S_EXEVCV_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: A call to execv has failed, errno = %d.

Explanation: The program could not call 'execv'. The severity level may vary depending on the context of the error.

Action: Evaluate **errno** for the reason. Depending on the reason, possible actions are:

- Deactivate the Directory System.
- Change the access mode of the program to be executed.
- Restore the program to be executed.
- Activate the Directory System.
- Report the problem to the responsible software engineer.

0x1260a3e9 GDS_S_EXITCACHE

Severity: Notice **Component:** gds/GDS_S_GENERAL

Text: Exit DUA-cache process

Explanation: DUA-cache process has been terminated

Action: No action !

0x1260a961 GDS_S_EXIT_DAEMON

Severity: Notice **Component:** gds/GDS_S_GENERAL

Text: The gdsdaemon program for Directory ID %d has finished.\n

Explanation: The shadow update program **gdsdaemon** for the specified Directory ID has finished.

Action: No action required.

0x1260a899 GDS_S_EXITDSA

Severity: Notice **Component:** gds/GDS_S_GENERAL

Text: Exit DSA of Directory ID: %d.\n

Explanation: The Directory Service Agent for the specified Directory ID has shut down.

Action: No action required.

0x1260aa8d GDS_S_EXIT_GENDB

Severity: Notice **Component:** gds/GDS_S_GENERAL

Text: Exit database generation program gdsgendb.\n

Explanation: The database generation program **gdsgendb** has terminated.

Action: No action required.

0x1260aa29 GDS_S_EXIT_MKISS

Severity: Notice **Component:** gds/GDS_S_GENERAL

Text: The gdsmkiss program exited.\n

Explanation: The schema object creation program **gdsmkiss** has terminated.

Action: No action required.

0x1260ab55 GDS_S_EXIT_MKUPD

Severity: Notice **Component:** gds/GDS_S_GENERAL

Text: The gdsmkupd program exited.\n

Explanation: The master knowledge update program **gdsmkupd** terminated.

Action: No action required.

0x1260a44d GDS_S_EXITMONITOR

Severity: Notice **Component:** gds/GDS_S_IPC

Text: Exit monitor process

Explanation: Monitor process has been terminated

Action: No action !

0x1260aaf1 GDS_S_EXIT_TRANSFER

Severity: Notice **Component:** gds/GDS_S_GENERAL

Text: The gdstransfer exited.\n

Explanation: The database transfer program **gdstransfer** terminated.

Action: No action required.

0x1260a0ca GDS_S_FCLOSE_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: File could not be closed, errno = %d.

Explanation: The program could not close a file. The severity level may vary depending on the context of the error.

Action: This problem should not occur and cannot be corrected by a user or system administrator. Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a0cc GDS_S_FCNTL_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: fcntl call failed for command %d, errno = %d.

Explanation: The program could not call **fcntl** for a file. The severity level may vary depending on the context of the error.

Action: This problem should not occur and cannot be corrected by a user or system administrator. Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a0cf GDS_S_FEOF

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: End of file detected.

Explanation: The program has detected the end of a file. The severity level may vary depending on the context of the error.

Action: No action required.

0x1260a0cb GDS_S_FFLUSH_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: File could not be flushed, errno = %d.

Explanation: The program could not flush a file. The severity level may vary depending on the context of the error.

Action: This problem should not occur and cannot be corrected by a user or system administrator. Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a0c9 GDS_S_FOPEN_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: File %s could not be opened in mode '%s', errno = %d.

Explanation: The program could not open the specified file in the specified mode. The severity level may vary depending on the context of the error.

Action: Evaluate **errno** for the reason. Depending on the reason, possible actions are:

- Deactivate the Directory System.
- Change the access mode of the file.
- Create the file.
- Restore the database.

- Activate the Directory System.
- Report the problem to the responsible software engineer.

0x1260a0e3 GDS_S_FORK_ERR

Severity: Unknown **Component:** gds/GDS_S_GENERAL

Text: A call to fork has failed, errno = %d.

Explanation: The program could not fork.

Action: Evaluate **errno** for the reason. Depending on the reason, possible actions are:

- Increment the limit for the count of processes in the system.
- Reduce the count of actually running processes.
- Report the problem to the responsible software engineer.

0x1260a0cd GDS_S_FREAD_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: File could not be read, errno = %d.

Explanation: The program could not read a file. This could indicate a data inconsistency. The severity level may vary depending on the context of the error.

Action: Evaluate **errno** for the reason. To determine the reason report the problem to the responsible software engineer. In the case of a data inconsistency, restore the database to regain a consistent state.

0x1260a0d9 GDS_S_FTOK_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: A ftok system call has failed (path =%s, key = %c, errno = %d).

Explanation: The program could not perform a ftok operation successfully.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a0ce GDS_S_FWRITE_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: File could not be written, errno = %d.

Explanation: The program could not write a file. The severity level may vary depending on the context of the error.

Action: Evaluate **errno** for the reason. To determine the reason report the problem to the responsible software engineer. In the case of a data inconsistency, restore the database to regain a consistent state.

0x1260a8d4 GDS_S_ILL_ACC_CLASS

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Invalid access class %d detected.

Explanation: An invalid access class was encountered in the Directory schema.

Action: To determine the reason report the problem to the responsible software engineer. In the case of a data inconsistency, restore the database to regain a consistent state.

0x1260a8d3 GDS_S_ILL_ACC_RIGHT

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Invalid access right %d detected.

Explanation: An invalid access right was encountered in the Directory schema.

Action: To determine the reason report the problem to the responsible software engineer. In the case of a data inconsistency, restore the database to regain a consistent state.

0x1260a193 GDS_S_ILL_ASN1_ATTR_ENTRY_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: An entry in the `asn1_attr` file with illegal format was detected.

Explanation: The program could not read an entry in the **asn1_attr** file. Each entry should have the format *ob_id rep*, where *ob_id* specifies an attribute type and *rep* specifies the ASN.1 representation of the attribute.

Action: If the Error occurred in the C-Stub, check the *asn1_attr* file for incorrect entries and repair the file. If the error occurred in the Directory Service Agent, restore the database.

0x1260a8cf GDS_S_ILL_AT_SYNTAX

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Unknown attribute syntax %d detected.

Explanation: The attribute table contains an attribute syntax, that is not known by the DSA.

Action: To determine the reason report the problem to the responsible software engineer. In the case of a data inconsistency, restore the database to regain a consistent state.

0x1260a8d2 GDS_S_ILL_DN_INDEX

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Invalid reference %d to Distinguished Name list detected.

Explanation: A record contains an invalid reference to the DN-list.

Action: This problem should not occur. To determine the reason report the problem to the responsible software engineer. In the case of a data inconsistency, restore the database to regain a consistent state.

0x1260a8d5 GDS_S_ILL_DN_INTRPRTN

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Illegal interpretation %d of a Distinguished Name %b detected.

Explanation: An invalid interpretation of a Distinguished Name was encountered in the distinguished name list.

Action: To determine the reason report the problem to the responsible software engineer. In the case of a data inconsistency, restore the database to regain a consistent state.

0x1260a89d GDS_S_ILL_SCHEMA_NAME

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The distinguished name %s of the schema is illegal.\n

Explanation: The schema has been changed illegally. As a result the distinguished name of the schema is illegal.

Action: Restore the database.

0x1260a58a GDS_S_ILLSTATE_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Illegal process state detected

Explanation: Stub process has detected a state not described by the state/event table

Action: Evaluate state value. Report the problem to the responsible software engineer.

0x1260a58b GDS_S_ILLSTATE_EVENT_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Illegal state/event combination detected (state = %d, event = %d)

Explanation: Stub process has detected a state/event combination not described by the state/event table

Action: Evaluate state resp. event value. Report the problem to the responsible software engineer.

0x1260a196 GDS_S_INCONS_INSTREAM

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: An input file contains insufficient information.

Explanation: The program has tried to read some input, but didn't find it in the input stream.

Action: Provide the expected input stream.

0x1260a89a GDS_S_INITDSA

Severity: Notice **Component:** gds/GDS_S_GENERAL

Text: DSA of Directory ID: %d has initialized.\n

Explanation: The Directory Service Agent for the specified Directory ID has read the schema information and has attached to IPC.

Action: No action required.

0x1260a8a2 GDS_S_INIT_SEC_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Initializing credentials failed for auth. mech. %d, name of the target DSA: %s, \nmessage from security interface: %s.\n

Explanation: The Directory Service Agent (DSA) could not initialize the credentials for the specified authentication method. This means the DSA can not chain a request to the target DSA via Directory System Protocol (DSP). So the result of an operation may not be the expected one. The following authentication mechanisms can appear:

- 2 = Simple Unprotected Authentication
- 5 = DCE Authentication

Action: Check whether the message which was supplied by the security interface can help. If DCE Authentication was used:

- Check whether the attributes **Principal-Name** and **Authentication-Mechanism** of the target Directory Service Agent (DSA) are entered correctly in the Directory Database.
- Check whether the DCE security daemon is active.

0x1260a195 GDS_S_INSUFF_INFO

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Insufficient information. Variables expected: %d, read: %d.

Explanation: The program has tried to read in the specified number of variables, but found less.

Action: Check the input stream. If necessary, restore the database.

0x1260a57f GDS_S_INVABSID_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: An unexpected abstract syntax identifier was detected (abstract syntax-ID = %d)

Explanation: Stub process could not detect a valid abstract syntax identifier

Action: Evaluate the invalid abstract syntax-ID. Report the problem to the responsible software engineer.

0x1260a584 GDS_S_INVDATA_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Invalid data description length parameter in TP-routine call (data description length = %d)

Explanation: Stub process has detected an invalid data description length parameter in a TP-routine call.

Action: Evaluate the invalid data description length. Report the problem to the responsible software engineer.

0x1260a586 GDS_S_INVOPENID_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Invalid open-ID parameter in TP-routine call (open-ID = %d)

Explanation: Stub process has detected an invalid open-ID parameter in a TP-routine call.

Action: Evaluate the invalid open-ID. Report the problem to the responsible software engineer.

0x1260a57e GDS_S_INVRCVBUFFER_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: An unexpected receive buffer type or length was detected (type = %d, length = %d)

Explanation: Stub process could not detect a valid receive buffer type or receive buffer length

Action: Evaluate the invalid buffer type/length. Report the problem to the responsible software engineer.

0x1260a583 GDS_S_INVTRANS_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Invalid transfer type parameter in TP-routine call (transfer type = %d)

Explanation: Stub process has detected an invalid transfer type parameter in a TP-routine call.

Action: Evaluate the invalid transfer type. Report the problem to the responsible software engineer.

0x1260a582 GDS_S_INVVERSNO_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Invalid version no. in TP-routine call (version = %d)

Explanation: Stub process has detected an invalid version no. parameter in a TP-routine call.

Action: Evaluate the invalid version number. Report the problem to the responsible software engineer.

0x1260a57c GDS_S_IOVERFLOW_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: An IPC-association table overflow was detected (max. no. of entries = %d)

Explanation: Stub process could not find an empty IPC-association table entry

Action: If required, the no. of IPC-association table entries can be increased by starting the Stub process with the -I switch.

0x1260a45b GDS_S_IPCASIDIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal IPC-association-ID parameter (association-ID = %d)

Explanation: An IPC-function has detected an illegal association-ID parameter.

Action: Evaluate association-ID parameter. Report the problem to the responsible software engineer.

0x1260a467 GDS_S_IPCDIRIDIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal directory-ID type parameter (directory-ID = %d)

Explanation: An IPC-function has detected an illegal directory-ID parameter.

Action: Evaluate directory-ID parameter. Report the problem to the responsible software engineer.

0x1260a588 GDS_S_IPCEV_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Can't get IPC-event description (file descriptor information)

Explanation: Stub process was not able to register at IPC.

Action: Evaluate error occurring at IPC-level. Report the problem to the responsible software engineer.

0x1260a462 GDS_S_IPCEVMOIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal IPC-event mode parameter (event mode = %d)

Explanation: An IPC-function has detected an illegal event mode parameter.

Action: Evaluate event mode parameter. Report the problem to the responsible software engineer.

0x1260a486 GDS_S_IPCEXTSPEC_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Invalid specification of an shared memory extension area

Explanation: An illegal extension area specification for the -e switch was detected by the gdsipcinit program.

Action: Use an valid extension area specification consisting of: -e <extension area identifier>, <extension area size>, <# of extension area entries (optional)>, <extension area initialization value (optional)>.

0x1260a473 GDS_S_IPCGETRES_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Allocation of IPC-resources failed

Explanation: The IPC-resources could not be allocated successfully because of a system problem.

Action: Evaluate system problem which is also logged. Report the problem to the responsible software engineer.

0x1260a474 GDS_S_IPCHEAPREL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Releasing heap memory failed (offset = %#x)

Explanation: A heap memory block could not be successfully released from IPC-shared memory.

Action: Evaluate offset value. Report the problem to the responsible software engineer.

0x1260a45f GDS_S_IPCILNIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal IPC-invoke-PDU length parameter (PDU-length = %d)

Explanation: An IPC-function has detected an illegal invoke-PDU length parameter.

Action: Evaluate invoke-PDU length parameter. Report the problem to the responsible software engineer.

0x1260a488 GDS_S_IPCINUSE_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: IPC-resources already in use

Explanation: The gdsipcinit program was called even though the directory system is already running.

Action: The directory system should be deactivated first.

0x1260a464 GDS_S_IPCINVIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal IPC-invoke information parameter (invoke-ID = %d, user-ID = %d, context-Id = %d)

Explanation: An IPC-function has detected an illegal invoke information parameter.

Action: Evaluate invoke information parameter. Report the problem to the responsible software engineer.

0x1260a476 GDS_S_IPCLIMASS_ERR

Severity: Notice **Component:** gds/GDS_S_IPC

Text: IPC-association limit exceeded (limit = %d)

Explanation: An IPC-association cannot be established to an IPC-server because of a resource limitation.

Action: Deactivate Directory System. Increase the number of clients (for any directory-ID configured) being able to access the Directory System at a time. Activate Directory System.

0x1260a47b GDS_S_IPCLIMCRED_ERR

Severity: Notice **Component:** gds/GDS_S_IPC

Text: IPC-user credential entry limit exceeded (limit = %d)

Explanation: An IPC-process cannot add user credentials to shared memory because of a resource limitation.

Action: Deactivate Directory System. Increase the number of clients (for any directory-ID configured) being able to access the Directory System at a time. Activate Directory System.

0x1260a479 GDS_S_IPCLIMDIST_ERR

Severity: Notice **Component:** gds/GDS_S_IPC

Text: IPC-distributed command entry limit exceeded (limit = %d)

Explanation: An IPC-process cannot send a distributed command because of a resource limitation.

Action: Deactivate Directory System. Increase the number of clients (for any directory-ID configured) being able to access the Directory System at a time. Activate Directory System.

0x1260a47a GDS_S_IPCLIMHEAP_ERR

Severity: Notice **Component:** gds/GDS_S_IPC

Text: IPC-heap memory limit exceeded (memory size requested = %d)

Explanation: An IPC-process cannot write data to shared memory heap because of a resource limitation.

Action: Deactivate Directory System. Increase the number of clients (for any directory-ID configured) being able to access the Directory System at a time. Activate Directory System.

0x1260a478 GDS_S_IPCLIMREG_ERR

Severity: Notice **Component:** gds/GDS_S_IPC

Text: IPC-registration limit exceeded (limit = %d)

Explanation: An IPC-process cannot be registered at IPC level because of a resource limitation.

Action: Deactivate Directory System. Increase the number of clients (for any directory-ID configured) being able to access the Directory System at a time. Activate Directory System.

0x1260a45e GDS_S_IPCMREFIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal IPC-buffer reference parameter (buffer reference = %#x)

Explanation: An IPC-function has detected an illegal buffer reference parameter.

Action: Evaluate buffer reference parameter. Report the problem to the responsible software engineer.

0x1260a47c GDS_S_IPCMMSGSZ_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: IPC-message of invalid size received (size = %d)

Explanation: An IPC-message of an invalid size was received.

Action: Evaluate the size. Report the problem to the responsible software engineer.

0x1260a45d GDS_S_IPCMTYPIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal IPC-data fragment parameter (data fragment = %d)

Explanation: An IPC-function has detected an illegal data fragment parameter.

Action: Evaluate data fragment parameter. Report the problem to the responsible software engineer.

0x1260a481 GDS_S_IPCMXBUFS_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal 'max. IPC-communication buffer size' switch value (value = %d ; 0 < value <= %d)

Explanation: An illegal parameter value for the -l switch (max. communication buffer size) was detected by the gdsipcinit program.

Action: Specify a valid parameter value.

0x1260a483 GDS_S_IPCMXCLT_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal 'max. # of IPC-client entries' switch value (value = %d ; 0 < value <= %d)

Explanation: An illegal parameter value for the -c switch (max. # of client entries) was detected by the gdsipcinit program.

Action: Specify a valid parameter value.

0x1260a484 GDS_S_IPCMXCRD_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal 'max. # of IPC-user credential entries' switch value (value = %d ; 0 < value <= %d)

Explanation: An illegal parameter value for the -u switch (max. # of user credential entries) was detected by the gdsipcinit program.

Action: Specify a valid parameter value.

0x1260a47f GDS_S_IPCMXDIST_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal 'max. # of distributed command entries' switch value (value = %d ; 0 < value <= %d)

Explanation: An illegal parameter value for the -d switch (max. # of distributed command entries) was detected by the gdsipcinit program.

Action: Specify a valid parameter value.

0x1260a485 GDS_S_IPCMXHP_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal 'max. # of IPC-heap buffer entries' switch value (value = %d ; 0 < value <= %d)

Explanation: An illegal parameter value for the -h switch (max. # of heap buffer entries) was detected by the gdsipcinit program.

Action: Specify a valid parameter value.

0x1260a480 GDS_S_IPCMXREG_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal 'max. # of IPC-registration entries' switch value (value = %d ; 0 < value <= %d)

Explanation: An illegal parameter value for the -r switch (max. # of registration entries) was detected by the gdsipcinit program.

Action: Specify a valid parameter value.

0x1260a482 GDS_S_IPCMXSRV_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal 'max. # of IPC-server entries' switch value (value = %d ; 0 < value <= %d)

Explanation: An illegal parameter value for the -s switch (max. # of server entries) was detected by the gdsipcinit program.

Action: Specify a valid parameter value.

0x1260a47e GDS_S_IPCNOREG_ERR

Severity: Notice **Component:** gds/GDS_S_IPC

Text: Can't find registration entry (process type = %d, directory-ID = %d)

Explanation: It was impossible to find a registration entry associated to the specified parameters.

Action: Evaluate 'process type'- and 'directory-ID'-parameter. Report the problem to the responsible software engineer.

0x1260a46d GDS_S_IPCNOSERV_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Requested IPC-server not available (server-ID = %d)

Explanation: A request was made to an IPC-server which is not (yet) available.

Action: Evaluate requested server-ID. Report the problem to the responsible software engineer.

0x1260a465 GDS_S_IPCOPIDIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal IPC-operation-ID parameter (operation-ID = %d)

Explanation: An IPC-function has detected an illegal operation-ID parameter.

Action: Evaluate operation-ID parameter. Report the problem to the responsible software engineer.

0x1260a469 GDS_S_IPCPARSZIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal 'distributed command parameter size' parameter (parameter size = %d)

Explanation: An IPC-function has detected an illegal 'distributed command parameter size' parameter.

Action: Evaluate 'parameter size' value. Report the problem to the responsible software engineer.

0x1260a466 GDS_S_IPCPTYPEIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal IPC-process type parameter (process type = %d)

Explanation: An IPC-function has detected an illegal process type parameter.

Action: Evaluate process type parameter. Report the problem to the responsible software engineer.

0x1260a460 GDS_S_IPCRLNIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal IPC-result-PDU length parameter (PDU-length = %d)

Explanation: An IPC-function has detected an illegal result-PDU length parameter.

Action: Evaluate result-PDU length parameter. Report the problem to the responsible software engineer.

0x1260a470 GDS_S_IPCRMSG_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Receiving of an IPC-message failed

Explanation: Receiving of an IPC-message through message queue was not successfully because of a system problem.

Action: Evaluate system problem which is also logged. Report the problem to the responsible software engineer.

0x1260a461 GDS_S_IPCRSTYIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal IPC-result type parameter (result type = %d)

Explanation: An IPC-function has detected an illegal result type parameter.

Action: Evaluate result type parameter. Report the problem to the responsible software engineer.

0x1260a477 GDS_S_IPCSLIMSVR_ERR

Severity: Notice **Component:** gds/GDS_S_IPC

Text: IPC-server limit exceeded (limit = %d)

Explanation: An IPC-server cannot become established to IPC because of a resource limitation.

Action: Deactivate Directory System. Increase the number of servers (for any directory-ID configured). Activate Directory System.

0x1260a46f GDS_S_IPCSMSG_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Sending of an IPC-message failed

Explanation: Sending of an IPC-message through message queue was not successfully because of a system problem.

Action: Evaluate system problem which is also logged. Report the problem to the responsible software engineer.

0x1260a472 GDS_S_IPCSRATT_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Receiving of an attention message failed (fd = %d, errno = %d)

Explanation: Receiving of an attention message through named FIFO was not successfully because of a system problem.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a471 GDS_S_IPCSSATT_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Sending of an attention message failed

Explanation: Sending of an attention message through named FIFO was not successfully because of a system problem.

Action: Evaluate system problem which is also logged. Report the problem to the responsible software engineer.

0x1260a46c GDS_S_IPCSTATE_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: IPC-function call not allowed in this state (state = %d)

Explanation: An IPC-function was called in a state where this isn't allowed.

Action: Evaluate state information. Report the problem to the responsible software engineer.

0x1260a46a GDS_S_IPCSTATEIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal process state parameter (process state = '%s')

Explanation: An IPC-function has detected an illegal process state parameter.

Action: Evaluate process state parameter. Report the problem to the responsible software engineer.

0x1260a45a GDS_S_IPCSVIDIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal IPC-server-ID parameter (server-ID = %d)

Explanation: An IPC-function has detected an illegal server-ID parameter.

Action: Evaluate server-ID parameter. Report the problem to the responsible software engineer.

0x1260a463 GDS_S_IPCSVMOIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal IPC-server mode parameter (server mode = %d)

Explanation: An IPC-function has detected an illegal server mode parameter.

Action: Evaluate server mode parameter. Report the problem to the responsible software engineer.

0x1260a46e GDS_S_IPCSYNC_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Synchronisation of IPC-shared memory access failed

Explanation: An access to IPC-shared memory could not be synchronized successfully because of a system problem.

Action: Evaluate system problem which is also logged. Report the problem to the responsible software engineer.

0x1260a475 GDS_S_IPCTMEX_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Sending distributed command failed because of time out\n\t\t\t(command = %d, server/process-ID = %d, timeout = %d)

Explanation: The IPC-resources could not be allocated successfully because of a system problem.

Action: Evaluate system problem which is also logged. Report the problem to the responsible software engineer.

0x1260a468 GDS_S_IPCTMOUTIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal timeout parameter (timeout = %d sec)

Explanation: An IPC-function has detected an illegal timeout parameter.

Action: Evaluate timeout parameter. Report the problem to the responsible software engineer.

0x1260a487 GDS_S_IPCUNKNOWN_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal switch (switch = -%c)\nvalid switches are:\n\t[-d<# of dist. command entries>]\n\t[-r<# of registration entries>]\n\t[-s<# of server entries>]\n\t[-c<# of client entries>]\n\t[-u<# of user credential entries>]\n\t[-l<com. buffer size (in kB)>]\n\t[-h<# of heap entries>]\n\t[-R (= remove IPC-resources)]\n

Explanation: An illegal switch was detected by the gdsipcinit program.

Action: Specify valid switches only.

0x1260a46b GDS_S_IPCUNLDIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal process unload factor parameter (unload factor = %d)

Explanation: An IPC-function has detected an illegal process unload factor parameter.

Action: Evaluate process unload factor parameter. Report the problem to the responsible software engineer.

0x1260a459 GDS_S_IPCVERS_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Invalid IPC-version number (version = %d)

Explanation: The program has detected an invalid version number.

Action: The program must be relinked by using the proper IPC- library. The actual IPC-version number in use can be obtained by means of the tool 'gdsipcstat'.

0x1260a458 GDS_S_IPCVERSIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal IPC-version number parameter (version = %d)

Explanation: An IPC-function has detected an illegal version parameter.

Action: Evaluate version number parameter. Report the problem to the responsible software engineer.

0x1260a47d GDS_S_IPCVPID_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Can't find a new virtual process-ID

Explanation: It was impossible to associate a new virtual process-ID to a real process.

Action: Report the problem to the responsible software engineer.

0x1260a45c GDS_S_IPCWTPIL_ERR

Severity: Fatal **Component:** gds/GDS_S_IPC

Text: Illegal IPC-wait time parameter (wait time type = %d)

Explanation: An IPC-function has detected an illegal wait time parameter.

Action: Evaluate wait time parameter. Report the problem to the responsible software engineer.

0x1260a8c3 GDS_S_ISADDINDEX_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: A C-ISAM-index could not be added, iserrno = %d.

Explanation: The program could not add an index to a C-ISAM file.

Action: Evaluate **iserrno** for the reason. Depending on the reason, possible actions are:

- Deactivate the Directory System.

- Free up disk space.
- Grant access right to the C-ISAM file.
- Activate the Directory System.
- Report the problem to the responsible software engineer.

0x1260a8c2 GDS_S_ISBUILD_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: C-ISAM-FILE %s with record length %d could not be built in mode %d, iserrno = %d.

Explanation: The program could not build the specified C-ISAM file in the specified mode.

Action: Evaluate **iserrno** for the reason. Depending on the reason, possible actions are:

- Deactivate the Directory System.
- Free up disk space.
- Grant access right to the directory.
- Activate the Directory System.
- Report the problem to the responsible software engineer.

0x1260a8c5 GDS_S_ISCLOSE_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: C-ISAM File could not be closed, iserrno = %d.

Explanation: The program could not close a C-ISAM file.

Action: This problem should not occur and cannot be corrected by a user or system administrator. Evaluate **iserrno** for the reason. Report the problem to the responsible software engineer.

0x1260a8cb GDS_S_ISDELETE_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: The record of a C-ISAM File could not be deleted, iserrno = %d.

Explanation: The program could not delete the record of a C-ISAM file.

Action: Evaluate **iserrno** for the reason. Depending on the reason, possible actions are:

- Deactivate the Directory System.
- Change the access mode of the C-ISAM file.
- Restore the database.
- Activate the Directory System.
- Report the problem to the responsible software engineer.

0x1260a8cc GDS_S_ISLOCK_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: A C-ISAM File could not be locked, iserrno = %d.

Explanation: The program could not lock a C-ISAM file.

Action: This problem should not occur and cannot be corrected by a user or system administrator. Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a8c4 GDS_S_ISOPEN_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: C-ISAM-FILE %s could not be opened in mode %d, iserrno = %d.

Explanation: The program could not open the specified C-ISAM file in the specified mode. The severity level may vary depending on the context of the error.

Action: Evaluate **iserrno** for the reason. Depending on the reason, possible actions are:

- Deactivate the Directory System.
- Change the access mode of the C-ISAM file.
- Restore the database.
- Activate the Directory System.
- Report the problem to the responsible software engineer.

0x1260a8c9 GDS_S_ISREAD_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: C-ISAM-File could not be read with mode %d, iserrno = %d.

Explanation: The program could not read a C-ISAM file. The severity level may vary depending on the context of the error.

Action: Evaluate **iserrno** for the reason. Depending on the reason, possible actions are:

- Deactivate the Directory System.
- Change the access mode of the C-ISAM file.
- Restore the database.
- Activate the Directory System.
- Report the problem to the responsible software engineer.

0x1260a8cd GDS_S_ISRELEASE_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: A locked C-ISAM File could not be released or unlocked, iserrno = %d.

Explanation: The program could not release a locked C-ISAM record or unlock the file.

Action: This problem should not occur and cannot be corrected by a user or system administrator. Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a8c8 GDS_S_ISSTART_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: C-ISAM-record pointer could not be set, iserrno = %d.

Explanation: The program could not set the C-ISAM record pointer.

Action: Evaluate **iserrno** for the reason. Depending on the reason, possible actions are:

- Deactivate the Directory System.
- Change the access mode of the C-ISAM file.

- Restore the database.
- Activate the Directory System.
- Report the problem to the responsible software engineer.

0x1260a8c6 GDS_S_ISUNIQUEID_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: A unique ID could not be generated for a C-ISAM-File, iserrno = %d.

Explanation: The program could not generate a unique ID for a C-ISAM file. The severity level may vary depending on the context of the error.

Action: Evaluate **iserrno** for the reason. To determine the reason report the problem to the responsible software engineer. In the case of a data inconsistency, restore the database to regain a consistent state.

0x1260a8ca GDS_S_ISWRITE_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: C-ISAM File could not be written, iserrno = %d.

Explanation: The program could not write a C-ISAM file. The severity level may vary depending on the context of the error.

Action: Evaluate **iserrno** for the reason. Depending on the reason, possible actions are:

- Deactivate the Directory System.
- Change the access mode of the C-ISAM file.
- Restore the database.
- Activate the Directory System.
- Report the problem to the responsible software engineer.

0x1260a58e GDS_S_LARGE_CUPMSG_ELEMENT

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: An element of the cache update message is longer than 4096 byte. Actual length: %d.

Explanation: A cache update message could not be generated, as it contained an element of more than 4096 byte. The cache update is suppressed therefore.

Action: No action required.

0x1260a0d5 GDS_S_LINK_ERR

Severity: Unknown **Component:** gds/GDS_S_GENERAL

Text: The program could not create a link to the file %s, errno = %d.

Explanation: The program could not create a link to the specified file.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a8d0 GDS_S_MAX_DN_INDEX

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Maximum Distinguished name list index is exceeded.

Explanation: The maximum index (32767) of the Distinguished Name (DN) list is reached. No more DN-list entries can be added.

Action: DN-List entries may be released by deleting attribute values of the Distinguished name syntax or of the ACL syntax. A DN-List entry is not released unless all such attribute values that are represented by the entry are released.

0x1260a8d1 GDS_S_MAX_DN_MEMORY

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Maximum memory for Distinguished name list exceeded.

Explanation: The memory maximum (160 K) of the Distinguished Name List is reached. No more DN-list entries can be added.

Action: DN-List entries may be released by deleting attribute values of the Distinguished name syntax or of the ACL syntax. A DN-List entry is not released unless all such attribute values that are represented by the entry are released.

0x1260a0d7 GDS_S_MKNOD_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Named FIFO %s could not be created in mode \"%d\", errno = %d.

Explanation: The program could not create the specified named FIFO.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a0e0 GDS_S_MSGCTL_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: A msgctl system call has failed (command = %d, errno = %d).

Explanation: The program could not perform a msgctl operation successfully.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a0df GDS_S_MSGGET_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: A msgget system call has failed (key = %d , access mode = %o, errno = %d).

Explanation: The program could not perform a msgget operation successfully.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a0e2 GDS_S_MSGRCV_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: A msgrcv system call has failed (errno = %d).

Explanation: The program could not perform a msgrcv operation successfully.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a0e1 GDS_S_MSGSND_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: A msgsnd system call has failed (errno = %d).

Explanation: The program could not perform a msgsnd operation successfully.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260aa97 GDS_S_NAMAT_RECUR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Acronym %s cannot have unlimited recurrence.\n

Explanation: The Attribute table of the administrated schema is in an illegal state. The number of recurring values is 0, but the indicated acronym cannot have unlimited recurrence, as it is used as a naming acronym in an SRT entry.

Action: This problem may occur due to a change to the schema object by an application program, that did not use the schema administration of GDS. The error is fatal for **gdsgendb** but not for **gdsdsa**, which continues with the unchanged schema. No action required. The problem may also occur, when a corrupted database is restored. In this case it is fatal for the **gdsdsa**. A consistent database has to be restored in this case.

0x1260a7d6 GDS_S_NDS_BUF_ERR

Severity: Warning **Component:** gds/GDS_S_CMV

Text: Invalid TSAP-address buffer size (size = %d, must be > %d)

Explanation: The program has detected an inconsistent NSAP-address

Action: Evaluate buffer size. Report the problem to the responsible software engineer.

0x1260a80f GDS_S_NDS_CNSAP_ERR

Severity: Fatal **Component:** gds/GDS_S_CMV

Text: Parser: compiling NSAP-address regular expression failed %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a80c GDS_S_NDS_DEVNM_ERR

Severity: Fatal **Component:** gds/GDS_S_CMV

Text: Parser: Syntax error (profile device missing) %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a7d4 GDS_S_NDS_DNSAP_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Can't decode NSAP-address (error code = %d)

Explanation: The program was not able to decode a NSAP-address

Action: No action !

0x1260a7f1 GDS_S_NDS_E163AC_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Area code of E.163-address missing

Explanation: The program was not able to detect an area code associated to a E.163-address.

Action: Provide a correct NSAP-address resp. NDS-configuration file.

0x1260a7f0 GDS_S_NDS_E163CC_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Country code (CC) of E.163-address missing

Explanation: The program was not able to detect a country code associated to a E.163-address.

Action: Provide a correct NSAP-address resp. NDS-configuration file.

0x1260a7f2 GDS_S_NDS_E163_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: E.163-address missing

Explanation: The program was not able to detect an E.163-address associated to a NSAP-address.

Action: Provide a correct NSAP-address resp. NDS-configuration file.

0x1260a7ee GDS_S_NDS_E163IP_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: International prefix of E.163-address missing

Explanation: The program was not able to detect an international prefix associated to a E.163-address.

Action: Provide a correct NDS-configuration file.

0x1260a7ef GDS_S_NDS_E163NP_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: National prefix of E.163-address missing

Explanation: The program was not able to detect an national prefix associated to a E.163-address.

Action: Provide a correct NDS-configuration file.

0x1260a7f3 GDS_S_NDS_E163V_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Invalid E.163-address (size = %d, %d <= size <= %d)

Explanation: The program has detected an invalid E.163-address.

Action: Provide a correct E.163-address.

0x1260a7f5 GDS_S_NDS_E164CC_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Country code (CC) of E.164-address missing

Explanation: The program was not able to detect a country code associated to a E.164-address.

Action: Provide a correct NSAP-address resp. NDS-configuration file.

0x1260a7f7 GDS_S_NDS_E164_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: E.164-address missing

Explanation: The program was not able to detect an E.164-address associated to a NSAP-address.

Action: Provide a correct NSAP-address resp. NDS-configuration file.

0x1260a7f4 GDS_S_NDS_E164IP_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: International prefix of E.164-address missing

Explanation: The program was not able to detect an international prefix associated to a E.164-address.

Action: Provide a correct NDS-configuration file.

0x1260a7f6 GDS_S_NDS_E164NDC_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: National destination code (NDC) of E.164-address missing

Explanation: The program was not able to detect a national destination code associated to a E.164-address.

Action: Provide a correct NSAP-address resp. NDS-configuration file.

0x1260a7f8 GDS_S_NDS_E164V_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Invalid E.164-address (size = %d, %d <= size <= %d)

Explanation: The program has detected an invalid E.164-address.

Action: Provide a correct E.164-address.

0x1260a811 GDS_S_NDS_ENSAP_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Parser: Can't encode NSAP-address (error = %d) %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a806 GDS_S_NDS_IFDESC_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Parser: No interface description found %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a807 GDS_S_NDS_IFMXDESC_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Parser: Maximal number of interface descriptions exceeded (maximum = %d) %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a808 GDS_S_NDS_IFNM_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Parser: Inconsistent use of interface names (%s != %s) %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a81a GDS_S_NDS_LEX_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Lexical analyser: syntax error %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a81b GDS_S_NDS_LEX_ERR1

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Lexical analyser: same DSP-part number specified twice %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a81c GDS_S_NDS_LEX_ERR2

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Lexical analyser: port number range exceeded (port = %d, maximum = %d) %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a81d GDS_S_NDS_LEX_ERR3

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Lexical analyser: multiple use of same CC (communication controller)-number

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a81e GDS_S_NDS_LEX_ERR4

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Lexical analyser: multiple use of same CC (communication controller)-line number

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a7e7 GDS_S_NDS_MAC_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: MAC-address (ethernet address) missing

Explanation: The program was not able to detect a MAC-address associated to a NSAP-address.

Action: Provide a correct NSAP-address.

0x1260a7e8 GDS_S_NDS_MACV_ERR

Severity: Warning **Component:** gds/GDS_S_CMV

Text: Invalid MAC-address (ethernet address) (size = %d, should be %d)

Explanation: The program has detected an invalid MAC-address associated to a NSAP-address.

Action: Provide a correct NSAP-address resp. NDS-configuration file.

0x1260a7da GDS_S_NDS_MAP_ERR

Severity: Warning **Component:** gds/GDS_S_CMV

Text: Invalid mapping rule parameter (mapping rule = %d)

Explanation: The program has detected an invalid mapping rule parameter.

Action: Evaluate mapping rule parameter. Report the problem to the responsible software engineer.

0x1260a7d5 GDS_S_NDS_MAPNSAP_ERR

Severity: Warning **Component:** gds/GDS_S_CMV

Text: Can't map NSAP-address information

Explanation: The program was not able to map NSAP-address information

Action: No action !

0x1260a817 GDS_S_NDS_MISE163_ERR

Severity: Fatal **Component:** gds/GDS_S_CMV

Text: Parser: E.163-information missing (e.g. CC/NP) %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a816 GDS_S_NDS_MISE164_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Parser: E.164-information missing (e.g. CC/NDC) %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a818 GDS_S_NDS_MISPROF_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Parser: (Sub-)profile information missing %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a815 GDS_S_NDS_MISX121_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Parser: X.121-information missing (e.g. DCC/DNIC) %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a80e GDS_S_NDS_MXNET_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Parser: Maximum number of net-address descriptions exceeded (maximum = %d) %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a812 GDS_S_NDS_MXOPT_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Parser: Maximum number of NSAP-address address map ping options exceeded (maximum = %d) %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a809 GDS_S_NDS_MXPROF_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Parser: Maximum number of profile descriptions exceeded (maximum = %d) %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a7de GDS_S_NDS_NBGUID_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Unique/group-ID for NETBIOS-address missing

Explanation: The program was not able to detect an unique/group identifier which must be associated to a NETBIOS-address.

Action: Provide a correct NSAP-address.

0x1260a7df GDS_S_NDS_NBGUIDV_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Invalid unique/group-ID for NETBIOS-address (id = %d, should be %d or %d)

Explanation: The program has detect an invalid unique/group identifier associated to the NETBIOS-address.

Action: Provide a correct NSAP-address resp. NDS-configuration file.

0x1260a7e0 GDS_S_NDS_NBNAME_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: NETBIOS-name missing

Explanation: The program was not able to detect a NETBIOS-name which must be associated to a NETBIOS-address.

Action: Provide a correct NSAP-address.

0x1260a7e1 GDS_S_NDS_NBNAMEV_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Invalid NETBIOS-name (size = %d, maximum = %d)

Explanation: The program has detect an invalid NETBIOS-name associated to a NETBIOS-address.

Action: Provide a correct NSAP-address resp. NDS-configuration file.

0x1260a7fe GDS_S_NDS_NETADDR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: NOTICE: NSAP-address description entries decreased to %d (default value = %d)

Explanation: The program has decreased the number of NSAP-address description entries to a value smaller than the default value.

Action: No action !

0x1260a805 GDS_S_NDS_NETSPACE_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Parser: Can't allocate memory for net-address descriptions (%d bytes) %s

Explanation: The program was not able to allocate memory for net-address descriptions.

Action: If possible, specify a smaller number of net-addresses by means of the -n switch.

0x1260a80a GDS_S_NDS_NONSAP_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Parser: No NSAP-address found %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a7d2 GDS_S_NDS_NSAP_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Inconsistent NSAP-address information (length = %d)

Explanation: The program has detected an inconsistent NSAP-address

Action: No action !

0x1260a7d3 GDS_S_NDS_NSAP_ERR1

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Invalid number of NSAP-addresses (no. = %d, maximum = %d)

Explanation: The program has detected an invalid number of NSAP-addresses

Action: No action !

0x1260a800 GDS_S_NDS_OCONF_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Reopening of NDS-configuration source file '%s' failed (errno = %d)

Explanation: The program was not able to reopen the NDS-configuration source file.

Action: Evaluate the **iserrno** error variable for the reason.

0x1260a801 GDS_S_NDS_OCONFO_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Opening of NDS-configuration data base file '%s' failed (errno = %d)

Explanation: The program was not able to open the NDS-configuration data base file.

Action: Evaluate the **iserrno** error variable for the reason.

0x1260a7d9 GDS_S_NDS_OPMODE_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Invalid operation mode parameter (operation mode = %d)

Explanation: The program has detected an invalid operation mode parameter.

Action: Evaluate operation mode parameter. Report the problem to the responsible software engineer.

0x1260a813 GDS_S_NDS_OPTMEM_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Parser: Allocating memory for option value failed (size = %d) %s

Explanation: The program was not able to allocate memory for a NSAP-address option value.

Action: No action !

0x1260a80d GDS_S_NDS_PRIO_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Parser: Profile priority already exists (priority = %d) %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a7e5 GDS_S_NDS_PROC_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: TRANSDATA processor number missing

Explanation: The program was not able to detect a processor number which must be associated to a TRANSDATA-address.

Action: Provide a correct NSAP-address.

0x1260a7e6 GDS_S_NDS_PROCV_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Invalid TRANSDATA processor number (processor = %d, %d <= processor < %d)

Explanation: The program has detect an invalid region number associated to a TRANSDATA-address.

Action: Provide a correct NSAP-address resp. NDS-configuration file.

0x1260a80b GDS_S_NDS_PROFID_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Parser: Inconsistent use of profile-ID (%d != %d) %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a7d7 GDS_S_NDS_PROV_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Invalid XTI-provider name or index (name = '%s', index = %d)

Explanation: The program has detected an invalid XTI-provider name or index parameter

Action: Evaluate XTI-provider name/index parameter. Report the problem to the responsible software engineer.

0x1260a7fb GDS_S_NDS_PVC_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Permanent virtual call (PVC)-number missing

Explanation: The program was not able to detect a permanent virtual call number associated to a NSAP-address.

Action: Provide a correct NSAP-address resp. NDS-configuration file.

0x1260a7fc GDS_S_NDS_PVCV_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Invalid permanent virtual call number (number = %d, %d <= number <= %d)

Explanation: The program has detected an invalid permanent virtual call number.

Action: Provide a correct PVC-number.

0x1260a803 GDS_S_NDS_REDIR_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Redirection of 'stdout' failed (errno = %d)

Explanation: The program was not able to reopen the NDS-configuration source file.

Action: Evaluate the **iserrno** error variable for the reason

0x1260a810 GDS_S_NDS_REGCOMP_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Regular expression compilation error (reason = %s (%d)) %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a7e3 GDS_S_NDS_REGION_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: TRANSDATA region number missing

Explanation: The program was not able to detect a region number which must be associated to a TRANSDATA-address.

Action: Provide a correct NSAP-address.

0x1260a7e4 GDS_S_NDS_REGIONV_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Invalid TRANSDATA region number (region = %d, %d <= region < %d)

Explanation: The program has detect an invalid region number associated to a TRANSDATA-address.

Action: Provide a correct NSAP-address resp. NDS-configuration file.

0x1260a7d8 GDS_S_NDS_RULES_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: No NSAP-address matching rules found

Explanation: The program has found no matching rules in the data base corresponding to the requested transport provider type.

Action: If a valid NSAP-address was specified, then a transport provider specification associated to this address must be entered into the NDS-configuration data base.

0x1260a7db GDS_S_NDS_SEL_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: No NSAP-address selection possible

Explanation: The program was not able to associate NSAP-address information to a specific transport provider.

Action: If a valid NSAP-address was specified, then a NSAP-address (group) specification must be entered into the NDS-configuration data base.

0x1260a7e9 GDS_S_NDS_SUBID_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Subnetwork-ID missing

Explanation: The program was not able to detect a subnetwork identifier associated to a NSAP-address.

Action: Provide a correct NSAP-address.

0x1260a7e2 GDS_S_NDS_TPID_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Transport protocol-ID missing

Explanation: The program was not able to detect a Transport protocol identifier associated to a NSAP-address.

Action: Provide a correct NSAP-address.

0x1260a7d0 GDS_S_NDS_TSAP_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Inconsistent TSAP-address information (length = %d)

Explanation: The program has detected an inconsistent TSAP-address

Action: No action !

0x1260a7d1 GDS_S_NDS_TSEL_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Inconsistent T-selector information (length = %d)

Explanation: The program has detected an inconsistent T-selector

Action: No action !

0x1260a81f GDS_S_NDS_UNKNOWNREP_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Parser: Unknown representation for option detected (option type = %d, representation = %d)

Explanation: The program has detected an unknown representation value associated to an option.

Action: Evaluate option type and representation. Report the problem to the responsible software engineer.

0x1260a7ff GDS_S_NDS_USAGE_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Invalid switch detected\n \tUSAGE: ndscomp\n \t[-h<workspace size>]\n \t[-n<# of net-address description entries>]\n \t[-o<NDS-configuration data base file>]\n \t[-V<1|2>] = verbose mode (1), extended verbose mode (2)\n \t[-P, -w] = serviceability switches\n \t<NDS-configuration source file>

Explanation: The program ndscomp was called with an incorrect syntax.

Action: No action !

0x1260a814 GDS_S_NDS_UWSPACE_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Parser: Unsufficient work space memory %s

Explanation: The program has detected an unsufficient work space.

Action: The work space may be increased be means of the -h switch.

0x1260a7dd GDS_S_NDS_VERS_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Invalid version of NDS-configuration data base (version = %d , should be %d)

Explanation: The program has detected an invalid version number in the NDS-configuration data base.

Action: Evaluate version number. Report the problem to the responsible software engineer.

0x1260a802 GDS_S_NDS_WCONFO_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: A write operation to NDS-configuration data base file '%s' failed (errno = %d)

Explanation: The program was not able to write to the NDS-configuration data base file.

Action: Evaluate the **iserrno** error variable for the reason.

0x1260a7fd GDS_S_NDS_WORKSPACE

Severity: Warning **Component:** gds/GDS_S_CMX

Text: NOTICE: Work space decreased to %d byte(s) (default value = %d)

Explanation: The program has decreased the workspace to a value smaller than the default value.

Action: No action !

0x1260a804 GDS_S_NDS_WSPACE_ERR

Severity: Fatal **Component:** gds/GDS_S_CMX

Text: Parser: Can't allocate work space memory (%d bytes) %s

Explanation: The program was not able to allocate work space memory.

Action: If possible, specify a smaller work space by means of the -h switch.

0x1260a7eb GDS_S_NDS_X121DCC_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Data country code (DCC)/Data network ID code (DNIC) missing

Explanation: The program was not able to detect a data country code/ data network ID code associated to a X.121-address.

Action: Provide a correct NSAP-address resp. NDS-configuration file.

0x1260a7ec GDS_S_NDS_X121_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: X.121-address missing

Explanation: The program was not able to detect a X.121-address associated to a NSAP-address.

Action: Provide a correct NSAP-address resp. NDS-configuration file.

0x1260a7ea GDS_S_NDS_X121IP_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: International prefix of X.121-address missing

Explanation: The program was not able to detect an international prefix associated to a X.121-address.

Action: Provide a correct NDS-configuration file.

0x1260a7ed GDS_S_NDS_X121V_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: Invalid X.121-address (size = %d, %d <= size <= %d)

Explanation: The program has detected an invalid X.121-address.

Action: Provide a correct X.121-address.

0x1260a7f9 GDS_S_NDS_X21_ERR

Severity: Warning **Component:** gds/GDS_S_CMX

Text: X.21-address missing

Explanation: The program was not able to detect an X.21-address associated to a NSAP-address.

Action: Provide a correct NSAP-address resp. NDS-configuration file.

0x1260a7fa GDS_S_NDS_X21V_ERR

Severity: Warning **Component:** gds/GDS_S_CMV

Text: Invalid X.21-address (size = %d, %d <= size <= %d)

Explanation: The program has detected an invalid X.21-address.

Action: Provide a correct X.21-address.

0x1260a7dc GDS_S_NDS_XTI_ERR

Severity: Warning **Component:** gds/GDS_S_CMV

Text: No XTI-interface support available

Explanation: The program has detected NSAP-addresses associated to an unsupported XTI transport provider.

Action: Remove the specification of the XTI-interface from your NDS-configuration source file because there is no support available on your system.

0x1260a819 GDS_S_NDS_YACC_ERR

Severity: Fatal **Component:** gds/GDS_S_CMV

Text: Parser: %s %s

Explanation: The program has detected a syntactically error in the NDS-configuration source file.

Action: Provide a correct configuration file.

0x1260a89b GDS_S_NO_DATAVERSION

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Data version number not found for directory ID %d.\n

Explanation: The Directory Service Agent for the specified Directory ID could not find the data version number in the **dversion** file.

Action: Check the **dversion** file. If corrupted, restore it.

0x1260a0c8 GDS_S_NOMEMORY

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Allocation of %d byte failed.

Explanation: The program could not get the specified amount of memory from the system. The severity level may vary depending on the context of the error.

Action: You could try stopping other functions, perhaps applications. If this doesn't work, you will need to acquire more memory.

0x1260a585 GDS_S_NOTPBUF_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Invalid data description length parameter in TP-routine call (data description length = %d)

Explanation: Stub process has detected an invalid data description length parameter in a TP-routine call.

Action: Evaluate the invalid data description length. Report the problem to the responsible software engineer.

0x1260a581 GDS_S_NOTRSYNTAX_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Can't determine transfer syntax associated to abstract syntax %d

Explanation: Stub process could not successfully determine a transfer syntax associated with the requested abstract syntax.

Action: Report the problem to the responsible software engineer.

0x1260a192 GDS_S_NUM_ASN1_ATTR_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Number of entries missing in asn1_attr file.

Explanation: The program could not read the number of entries from the **asn1_attr** file.

Action: If the Error occurred in the C-Stub, insert the number of entries into the first line of the **asn1_attr** file. If the error occurred in the Directory Service Agent, restore the database.

0x1260a194 GDS_S_OBID_ASN1_ATTR_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: %s in asn1_attr file cannot be converted.

Explanation: The program could not convert the specified object identifier from **asn1_attr** file.

Action: If the Error occurred in the C-Stub, change the object identifier in the **asn1_attr** file. If the error occurred in the Directory Service Agent, restore the database.

0x1260aa95 GDS_S_OCT_AT_INVALID

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Unknown mandatory or optional acronym %s.\n

Explanation: The Object Class Table (OCT) of the administrated schema is in an illegal state. It contains an entry having an acronym for the mandatory or optional attribute, which was not found in the attribute table (AT).

Action: This problem may occur due to a change to the schema object by an application program, that did not use the schema administration of GDS. The error is fatal for **gdsgendb** but not for **gdsdsa**, which continues with the unchanged schema. No action required. The problem may also occur, when a corrupted database is restored. In this case it is fatal for the **gdsdsa**. A consistent database has to be restored in this case.

0x1260aa94 GDS_S_OCT_NAUX_OC_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Unknown or invalid auxiliary acronym %s.\n

Explanation: The Object Class Table (OCT) of the administrated schema is in an illegal state. It contains an entry having an acronym for the auxiliary object classes, which is unknown or invalid.

Action: This problem may occur due to a change to the schema object by an application program, that did not use the schema administration of GDS. The error is fatal for **gdsgendb** but not for **gdsdsa**, which continues with the unchanged schema. No action required. The problem may also occur, when a corrupted database is restored. In this case it is fatal for the **gdsdsa**. A consistent database has to be restored in this case.

0x1260aa93 GDS_S_OCT_SUP_MISSING

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Unknown superclass acronym %s.\n

Explanation: The Object Class Table (OCT) of the administrated schema is in an illegal state. It contains an entry having an acronym for the superclass, which is unknown.

Action: This problem may occur due to a change to the schema object by an application program, that did not use the schema administration of GDS. The error is fatal for **gdsgendb** but not for **gdsdsa**, which continues with the unchanged schema. No action required. The problem may also occur, when a corrupted database is restored. In this case it is fatal for the **gdsdsa**. A consistent database has to be restored in this case.

0x1260a89e GDS_S_OPAT_MISSING

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Operational attribute or object class missing.\n

Explanation: The schema has been changed illegally. As a result an operational attribute or object class is missing.

Action: Restore the database

0x1260a0d0 GDS_S_OPEN_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: File %s could not be opened in mode \"%o\", errno = %d.

Explanation: The program could not open the specified file in the specified mode. The severity level may vary depending on the context of the error.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a8ce GDS_S_POOL_OPEN_OVFLW

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: Pool of open C-ISAM files is too small.

Explanation: An attempt was made by the DSA, to open more than 5 C-ISAM files simultaneously.

Action: This problem should not occur and cannot be corrected by a user or system administrator. Report the problem to the responsible software engineer.

0x1260a0d1 GDS_S_READ_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: File could not be read, errno = %d.

Explanation: The program could not read a file. This could indicate a data inconsistency. The severity level may vary depending on the context of the error.

Action: Evaluate **errno** for the reason. To determine the reason report the problem to the responsible software engineer. In the case of a data inconsistency, restore the database to regain a consistent state.

0x1260a587 GDS_S_REG_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Can't register Stub at IPC-level

Explanation: Stub process was not able to register at IPC.

Action: In most cases the reason may be an (temporary) IPC-resource bottleneck.

0x1260a580 GDS_S_ROSFUFAILED_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: A ROS-function failed (code = %d, class = %d, value = %d)

Explanation: Stub process could not successfully execute a remote operation service (ROS) function

Action: Evaluate error values (code, class, value). Report the problem to the responsible software engineer.

0x1260a0ea GDS_S_ROUTING_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: A call to dce_svc_routing has failed, error status = %lx, routing specification = %s.

Explanation: The program could not set the serviceability routing according to the specification. The function has set the specified status.

Action: Look up the error status in `dcesvcmsg.h`. If it indicates a shortage of memory, you could try stopping other functions, perhaps applications. If this doesn't work, you will need to acquire more memory. If error status indicates a bad routing specification string, use a correct specification for the routing. A correct specification for routing must have the form *severity:how:where[:private]*. The *severity* must be one of the following:

- **FATAL**
- **ERROR**
- **WARNING**
- **NOTICE**
- **NOTICE_VERBOSE**

The *how* field must be one of the following:

- **BINFILE**
- **TEXTFILE**
- **FILE**
- **DISCARD**
- **STDOUT**
- **STDERR**

The *where* field is a filename, that may contain a **%ld** string, that is replaced by the process ID of the currently running process. The *private* field is optional. It is of the form *[dir_id],[gds_components]*. *dir_id* is optional and specifies the directory ID for which the routing specification string is designated. *gds_components* is a comma separated list of components of the Global directory service. It must be one of the following:

- **monitor**
- **cache**
- **cstub**
- **sstub**

- dsa

0x1260a0ec GDS_S_ROUTINGS_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: A call to dce_svc_routings has failed, error status = %lx.

Explanation: The program could not determine the actual setting of the serviceability routing specification. The function has set the specified status.

Action: Look up the error status in dcesvcmsg.h. Currently there are no error states defined.

0x1260a57d GDS_S_ROVERFLOW_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: An ROS-association table overflow was detected (max. no. of entries = %d)

Explanation: Stub process could not find an empty ROS-association table entry

Action: If required, the no. of ROS-association table entries can be increased by starting the Stub process with the -R switch.

0x1260a44f GDS_S_RPC_BINDINFO

Severity: Notice **Component:** gds/GDS_S_IPC

Text: RPC-server binding info: %s

Explanation: If no global name is provided for the RPC-server then the binding information is logged allowing any RPC-client to contact this server.

Action: No action !

0x1260a457 GDS_S_RPC_DISTCMD_ERR

Severity: Warning **Component:** gds/GDS_S_IPC

Text: Distributed command failed (cmd = %d, destination = %d, reason = %d)

Explanation: A distributed command executed by the RPC-server failed.

Action: Evaluate the reason value. Report the problem to the responsible software engineer.

0x1260a454 GDS_S_RPC_GDSINFO_DIR_ERR

Severity: Warning **Component:** gds/GDS_S_IPC

Text: Invalid or missing directory-ID in GDS-component specification (dirid = %d, %d <= dirid <= %d)

Explanation: The RPC-server has detected an invalid resp. missing directory-identifier in the GDS-component specification.

Action: Provide a correct GDS-component information

0x1260a453 GDS_S_RPC_GDSINFO_ERR

Severity: Warning **Component:** gds/GDS_S_IPC

Text: Invalid or missing GDS-component specification (spec = %s)

Explanation: The RPC-server has detected an invalid resp. no GDS-component information within a serviceability routing parameter.

Action: Provide a correct GDS-component information

0x1260a450 GDS_S_RPC_RUNTIME_ERR

Severity: Warning **Component:** gds/GDS_S_IPC

Text: The RPC-server could not be established because of a RPC- runtime failure (status = %#x)

Explanation: RPC-problem during activation of the RPC-server for serviceability detected.

Action: Evaluate status and line number information. Report the problem to the responsible software engineer.

0x1260a456 GDS_S_RPC_SVC_FAILED

Severity: Warning **Component:** gds/GDS_S_IPC

Text: serviceability function call failed (status = %#x)

Explanation: A call to a serviceability function failed.

Action: Evaluate the status information. Report the problem to the responsible software engineer.

0x1260a455 GDS_S_RPC_SVCINFO

Severity: Warning **Component:** gds/GDS_S_IPC

Text: Invalid size of serviceability information (size = %d,\n %d < size < %d)

Explanation: The RPC-server has detected an invalid size of serviceability routing information.

Action: Provide a correct serviceability routing information

0x1260a451 GDS_S_RPC_THREADS_ERR

Severity: Warning **Component:** gds/GDS_S_IPC

Text: The RPC-server could not be established because of a threads failure (errno = %d)

Explanation: Threads problem during activation of the RPC-server for serviceability detected.

Action: Evaluate errno and line number information. Report the problem to the responsible software engineer.

0x1260a452 GDS_S_RPC_UNSUPPORTED

Severity: Warning **Component:** gds/GDS_S_IPC

Text: The RPC-server has received an unsupported remote procedure call

Explanation: The RPC-server for serviceability has detected an unsupported RPC.

Action: No action!

0x1260aa99 GDS_S_SCH_INCONSISTENT

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: An inconsistent schema object was detected.\n

Explanation: A record number was detected in one of the attribute files of the schema object, that does not correspond to the record number of the schema object record.

Action: This problem should not occur. To determine the reason report the problem to the responsible software engineer. Restore the database to regain a consistent state.

0x1260aa98 GDS_S_SCH_INSUFFICIENT

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: An insufficient schema object record was detected.\n

Explanation: The schema object record does not contain all the required information. One of the following is missing:

- The time stamp
- The number of SRT entries
- The number of OCT entries
- The number of AT entries.

Action: This problem may occur due to a change to the schema object by an application program, that did not use the schema administration of GDS. The error is fatal for **gdsgendb** but not for **gdsdsa**, which continues with the unchanged schema. No action required. The problem may also occur, when a corrupted database is restored. In this case it is fatal for the **gdsdsa**. A consistent database has to be restored in this case.

0x1260a0d3 GDS_S_SEEK_ERR

Severity: **Component:** gds/GDS_S_GENERAL
Unknown

Text: Seek operation on file failed, errno = %d.

Explanation: The program could not seek on a file.

Action: Evaluate **errno** for the reason. To determine the reason report the problem to the responsible software engineer. In the case of a data inconsistency, restore the database to regain a consistent state.

0x1260a589 GDS_S_SELECT_ERR

Severity: **Component:** gds/GDS_S_GENERAL
Unknown

Text: A call to select has failed, errno = %d

Explanation: The program could not successfully call 'select'

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a0de GDS_S_SEMCTL_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: A semctl system call has failed (command = %d, errno = %d).

Explanation: The program could not perform a semctl operation successfully.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a0dd GDS_S_SEMGET_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: A semget system call has failed (key = %d , access mode = %o, errno = %d).

Explanation: The program could not perform a semget operation successfully.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a0d8 GDS_S_SEMOP_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Semaphore operation failed (operation = %d, errno = %d).

Explanation: The program could not perform a semaphore operation successfully.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a0db GDS_S_SHMAT_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: A shmat system call has failed (errno = %d).

Explanation: The program could not perform a shmat operation successfully.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a0dc GDS_S_SHMCTL_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: A shmctl system call has failed (command = %d, errno = %d).

Explanation: The program could not perform a shmctl operation successfully.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a0da GDS_S_SHMGET_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: A shmget system call has failed (key = %d , access mode = %o, errno = %d).

Explanation: The program could not perform a shmget operation successfully.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a0e5 GDS_S_SIGHDL_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: A call to sigaction/signal has failed, signal = %d, errno = %d

Explanation: The program could not establish a signal handler.

Action: This problem should not occur and cannot be corrected by a user or system administrator. Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a190 GDS_S_SIGNAL_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Signal %d terminates process.

Explanation: The program has received the specified signal.

Action: The signal is either sent to the process by the system (e. g. segmentation violation) or by a user. Report the problem to the responsible software engineer. in the first case. Forbid the user to send signals in the second case. Reactivate the system.

0x1260aa90 GDS_S_SRT_NNAM_AT_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Invalid acronym %s for structure rule table.\n

Explanation: The Structure Rule Table (SRT) of the administrated schema is in an illegal state. It contains an entry having an acronym for the naming attribute, which is not found in the attribute table (AT).

Action: This problem may occur due to a change to the schema object by an application program, that did not use the schema administration of GDS. The error is fatal for **gdsgendb** but not for **gdsdsa**, which continues with the unchanged schema. No action required. The problem may also occur, when a corrupted database is restored. In this case it is fatal for the **gdsdsa**. A consistent database has to be restored in this case.

0x1260aa92 GDS_S_SRT_NSTR_OC_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Invalid acronym %s for object class.\n

Explanation: The Structure Rule Table (SRT) of the administrated schema is in an illegal state. It contains an entry having an acronym for an object class, which is not a structural object class.

Action: This problem may occur due to a change to the schema object by an application program, that did not use the schema administration of GDS. The error is fatal for **gdsgendb** but not for **gdsdsa**, which continues with the unchanged schema. No action required. The problem may also occur, when a corrupted database is restored. In this case it is fatal for the **gdsdsa**. A consistent database has to be restored in this case.

0x1260aa91 GDS_S_SRT_OC_INVALID

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Unknown acronym %s for object class.\n

Explanation: The Structure Rule Table (SRT) of the administrated schema is in an illegal state. It contains an entry having an acronym for an object class, which is not found in the object class (OCT).

Action: This problem may occur due to a change to the schema object by an application program, that did not use the schema administration of GDS. The error is fatal for **gdsgendb** but not for **gdsdsa**, which continues with the unchanged schema. No action required. The problem may also occur, when a corrupted database is restored. In this case it is fatal for the **gdsdsa**. A consistent database has to be restored in this case.

0x1260aa8f GDS_S_SRT_SUP_MISSING

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: Invalid number %d for superior structure rule.\n

Explanation: The Structure Rule Table (SRT) of the administrated schema is in an illegal state. It contains an entry having an illegal superior structure rule number. It is illegal, as it is not the rule number of another structure rule.

Action: This problem may occur due to a change to the schema object by an application program, that did not use the schema administration of GDS. The error is fatal for **gdsgendb** but not for **gdsdsa**, which continues with the unchanged schema. No action required. The problem may also occur, when a corrupted database is restored. In this case it is fatal for the **gdsdsa**. A consistent database has to be restored in this case.

0x1260a0ee GDS_S_STAT_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: The program could not get the status of the file %s, errno = %d.

Explanation: The program could not get the status of the specified file.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a966 GDS_S_SUP_ATTACH_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not attach to IPC.\n

Explanation: The program **gdsdaemon** could not attach to Inter Process Communication (IPC).

Action: See the fatal error logging of the GDS component ipc for the reason.

0x1260a977 GDS_S_SUP_CHANGE_ERRLOG_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program not could change an entry in an error logfile.\n

Explanation: The program **gdsdaemon** could not change an entry in it's internal error logfile **SHDERR**.

Action: Report the problem to the responsible software engineer.

0x1260a978 GDS_S_SUP_DELENTN_ERRLOG_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not delete an entry from an error logfile.\n

Explanation: The program **gdsdaemon** could not delete an entry from it's internal error logfile **SHDERR**.

Action: Report the problem to the responsible software engineer.

0x1260a972 GDS_S_SUP_DNLIST_REMDSA_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not retrieve the DSA name for the index %d from the database.\n

Explanation: The program **gdsdaemon** could not find the name of a Directory Service Agent (DSA) for the specified index in an internal name list of the DSA.

Action: Report the problem to the responsible software engineer.

0x1260a969 GDS_S_SUP_FOPEN_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: File %s could not be opened, errno = %d.\n

Explanation: The program **gdsdaemon** could not open the specified file.

Action: Evaluate **errno** for the reason. Depending on the reason, possible actions are:

- Change the access mode of the file.
- Create the file.
- Activate the Directory System.
- Report the problem to the responsible software engineer.

0x1260a96d GDS_S_SUP_HEADER_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not read the header information of the file %s.\n

Explanation: The program **gdsdaemon** could not read the header information of the file where the shadowing jobs are stored.

Action: Try to create the shadowing job again via the tool **gdsditadm** or report the problem to the responsible software engineer.

0x1260a964 GDS_S_SUP_ILL_DIRID

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The gdsdaemon program was started with an illegal directory identifier %d.\n

Explanation: The program **gdsdaemon** was started with an illegal directory identifier.

Action: Start the program again with a valid directory identifier.

0x1260a96f GDS_S_SUP_INSUFF_MEM

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program has not allocated enough memory for the update information.\n

Explanation: The program **gdsdaemon** has not allocated enough memory for the shadow update information.

Action: Report the problem to the responsible software engineer.

0x1260a96c GDS_S_SUP_LOCDSA_DNLIST_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not find the DSA name %s in the database.\n

Explanation: The program **gdsdaemon** could not find the specified name of the local Directory Service Agent (DSA) in an internal name list of the local DSA.

Action: Report the problem to the responsible software engineer.

0x1260a96b GDS_S_SUP_LOCDSA_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not read the name of the local DSA, errno = %d.\n

Explanation: The program **gdsdaemon** could not read the name of the local DSA from the **dsaname** file.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a965 GDS_S_SUP_LOCK_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not lock the file %s, errno = %d.\n

Explanation: The program **gdsdaemon** could not lock the specified file.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a96a GDS_S_SUP_NO_FILE_INFO

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not get file information about %s, errno = %d.\n

Explanation: The program **gdsdaemon** could not get file information with **fstat** about the specified file.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a971 GDS_S_SUP_OPENDIR_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not open the directory %s, errno = %d.\n

Explanation: The program **gdsdaemon** could not open the specified directory using the library function **opendir**.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a97a GDS_S_SUP_READ_COMPL_LOG_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not read the complete logmessage.\n

Explanation: The program **gdsdaemon** could not read the complete logmessage containing the delta update information.

Action: Report the problem to the responsible software engineer.

0x1260a979 GDS_S_SUP_READ_LOG_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not read a logmessage, errno = %d.\n

Explanation: The program **gdsdaemon** could not read the logmessage containing the delta update information.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a96e GDS_S_SUP_REMDSA_DNLIST_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not find the remote DSA name %s in the database.\n

Explanation: The program **gdsdaemon** could not find the specified name of a remote Directory Service Agent (DSA) in an internal name list of the local DSA.

Action: Check whether this remote DSA is stored in the local DSA or report the problem to the responsible software engineer.

0x1260a973 GDS_S_SUP_REM_UNUSED_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not remove the unused entries from the file %s.\n

Explanation: The program **gdsdaemon** could not remove the unused entries from the specified error file.

Action: Report the problem to the responsible software engineer.

0x1260a968 GDS_S_SUP_RESYNC_DSA_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not resynchronize DSA processes.\n

Explanation: The program **gdsdaemon** could not send a distributed command to the Directory Service Agent (DSA) to open a new shadowlogfile.

Action: See the fatal error logging of the GDS component ipc for the reason.

0x1260a974 GDS_S_SUP_SEARCH_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not execute a command to search an entry in the file %s.\n

Explanation: The program **gdsdaemon** could not execute a command to search an entry in the specified error file

Action: Report the problem to the responsible software engineer.

0x1260a975 GDS_S_SUP_SEARCH_STATE_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not get the state of a found entry.\n

Explanation: The program **gdsdaemon** could read the output of a **popen**-call to evaluate a status variable.

Action: Report the problem to the responsible software engineer.

0x1260a967 GDS_S_SUP_SYNC_DSA_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not synchronize DSA processes.\n

Explanation: The program **gdsdaemon** could not send a distributed command to the Directory Service Agent (DSA) to close the shadowlogfile.

Action: See the fatal error logging of the GDS component ipc for the reason.

0x1260a976 GDS_S_SUP_UPD_OP_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not perform the update operation.\n

Explanation: The program **gdsdaemon** could not perform the update operation.

Action: To find out the reason:

- Check the logfiles of the **gdsdaemon**.
- Check the logfiles of the local Directory Service Agent (DSA).
- Check the logfiles of the remote DSA.
- Report the problem to the responsible software engineer.

0x1260a962 GDS_S_SUP_USAGE

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The gdsdaemon program was called with wrong syntax.\n

Explanation: The program **gdsdaemon** was started with illegal parameters.

Action: Start the program again with the correct syntax: **gdsdaemon -ddir-id -mop-mode [-njob-entry] [-vSVC-logging] [-wSVC]**

0x1260a970 GDS_S_SUP_WR_HEADER_INFO

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not write the header information to file %s, errno = %d.\n

Explanation: The program **gdsdaemon** could not write header information to a temporary file.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a97b GDS_S_SUP_WRITE_LOG_ERR

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The program could not write the logmessage, errno = %d.\n

Explanation: The program **gdsdaemon** could not write the logmessage into the shadowlogfile.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a963 GDS_S_SUP_WRONG_OPMODE

Severity: Fatal **Component:** gds/GDS_S_GENERAL

Text: The gdsdaemon program was started with an illegal operation mode %d.\n

Explanation: The program **gdsdaemon** was started with an illegal operation mode. Only mode 1 or 2 are supported.

Action: Start the program again with a valid operation mode. .VL 5m .LImode 1 do distribution of \SHDLOG file only .LImode 2 do distribution of \SHDLOG file and all required delta update operations .LE

0x1260a0e6 GDS_S_SYSTEM_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: A call to system has failed, errno = %d.

Explanation: The program could not call 'system'.

Action: Evaluate **errno** for the reason. Depending on the reason, possible actions are:

- Deactivate the Directory System.
- Change the access mode of the program to be executed.
- Restore the program to be executed.
- Activate the Directory System.
- Report the problem to the responsible software engineer.

0x1260a0d6 GDS_S_UNLINK_ERR

Severity: Unknown **Component:** gds/GDS_S_GENERAL

Text: The program could not unlink the file %s, errno = %d.

Explanation: The program could not unlink the specified file.

Action: Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a0e4 GDS_S_WAIT_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: A call to wait has failed, errno = %d.

Explanation: The program could not wait for child processes.

Action: This problem should not occur and cannot be corrected by a user or system administrator. Evaluate **errno** for the reason. Report the problem to the responsible software engineer.

0x1260a0d2 GDS_S_WRITE_ERR

Severity: Warning **Component:** gds/GDS_S_GENERAL

Text: File could not be written, errno = %d.

Explanation: The program could not write a file. The severity level may vary depending on the context of the error.

Action: Evaluate **errno** for the reason. To determine the reason report the problem to the responsible software engineer. In the case of a data inconsistency, restore the database to regain a consistent state.

0x12862030 gssdce_s_authentication_error

Severity: Varies **Component:** gss

Text: Error decoding token. The token is corrupt.

Explanation: The token is invalid

Action: Retry the authentication sequence.

0x1286201d gssdce_s_bad_name

Severity: Varies **Component:** gss

Text: The supplied principal name is invalid.

Explanation: An attempt to access the name failed.

Action: Supply a valid name.

0x12862048 gssdce_s_bad_plaintext_padding

Severity: Varies **Component:** gss

Text: The token is invalid. It contains invalid padded plaintext.

Explanation: The token is invalid. It contains invalid padded plaintext.

Action: Application specific.

0x12862039 gssdce_s_bad_signature

Severity: Varies **Component:** gss

Text: The token signature was incorrect.

Explanation: The token's signature was incorrect. Either this was caused by a network error or it indicates the presence of an attacker.

Action: Retry the authentication sequence.

0x1286203a gssdce_s_bad_sig_seq

Severity: Varies **Component:** gss

Text: The token sequence number field in the token was invalid.

Explanation: The GSSAPI could not determine the token's sequence number. The token has been corrupted. Either this was caused by a network error or it indicates the presence of an attacker.

Action: Application specific.

0x1286204a gssdce_s_bad_status_type

Severity: Varies **Component:** gss

Text: The status type parameter is invalid.

Explanation: The status type parameter is invalid.

Action: Specify either **GSS_C_GSSCODE** or **GSS_C_MECHCODE** in the status_type parameter.

0x1286204b gssdce_s_bad_status_value

Severity: Varies **Component:** gss

Text: The status code is invalid.

Explanation: The GSSAPI could not translate the error code to a message.

Action: Supply a valid status code.

0x1286201b gssdce_s_bad_usage

Severity: Varies **Component:** gss

Text: The credential usage parameter is invalid.

Explanation: You specified an invalid credential type.

Action: Specify a credential type of either **GSS_C_ACCEPT**, **GSS_C_INITIATE** or **GSS_C_BOTH**.

0x1286202f gssdce_s_ber_decoding_error

Severity: Varies **Component:** gss

Text: Error decoding BER token header. The token is corrupt.

Explanation: An error was detected while decoding binary token header. The token is corrupt.

Action: Submit a problem report.

0x12862034 gssdce_s_bindings_length_error

Severity: Varies **Component:** gss

Text: Error extracting channel bindings from token - Invalid length

Explanation: There is a problem with the token's channel bindings. The token is corrupt.

Action: Retry the authentication sequence.

0x12862035 gssdce_s_bindings_value_error

Severity: Varies **Component:** gss

Text: The channel bindings in the token were incorrect

Explanation: The channel bindings in the token were incorrect

Action: Retry the authentication sequence.

0x12862047 gssdce_s_couldnt_decrypt_token

Severity: Varies **Component:** gss

Text: The token is invalid. The routine failed trying to decrypt data.

Explanation: The token is invalid. The routine failed trying to decrypt data.

Action: Application specific.

0x12862027 gssdce_s_couldnt_get_mech_cred

Severity: Varies **Component:** gss

Text: A credential cache entry could not be established.

Explanation: An internal error occurred while trying to open a credential cache.

Action: Retry the operation.

0x12862022 gssdce_s_couldnt_translate_name

Severity: Varies **Component:** gss

Text: The registry could not translate the specified name.

Explanation: The name or Universal Unique Identifier (UUID) was not found in the registry.

Action: Supply a valid name.

0x12862020 gssdce_s_couldnt_validate_context

Severity: Varies **Component:** gss

Text: The login context could not be validated from a keytable.

Explanation: No valid key for the specified server was found in the keytable.

Action: Check that the server's principal name has been registered and the key table specified, or check that the routine is checking the correct key table for the principal name.

0x12862019 gssdce_s_credential_corrupt

Severity: Varies **Component:** gss

Text: Internal error. The credential is corrupt.

Explanation: Credential consistency checks failed, indicating that the credential is corrupt.

Action: Examine the application for code that can corrupt memory.

0x12862050 gssdce_s_delegation_error

Severity: Varies **Component:** gss

Text: An error occurred while delegating access rights

Explanation: An attempt to delegate access rights failed

Action: Check that appropriate credentials were presented

0x12862049 gssdce_s_incorrect_server_principal

Severity: Varies **Component:** gss

Text: The token server principal name does not match the credential principal name.

Explanation: The token server principal name does not match the credential principal name. No security context was established.

Action: Use either a credential for the correct principal, or the default credential.

0x1286202a gssdce_s_invalid_context_state

Severity: Varies **Component:** gss

Text: The context is not available for the attempted operation

Explanation: An open context cannot be reused until it is deleted. A context must be open before per-message services are available

Action: Release the context before attempting to reuse it or open it before attempting to use per-message services.

0x12862016 gssdce_s_invalid_handle

Severity: Varies **Component:** gss

Text: The handle did not refer to a valid object.

Explanation: A security-context or credential could not be located from the given handle.

Action: Supply a valid handle.

0x128621ec gssdce_s_invalid_ownership

Severity: Varies **Component:** gss

Text: The supplied ownership must either be APPLICATION or GSSAPI.

Explanation: Neither **GSSDCE_C_OWNERSHIP_APPLICATION** nor **GSSDCE_C_OWNERSHIP_GSSAPI** was given for the ownership parameter.

Action: Supply a valid parameter value.

0x1286203e gssdce_s_message_already_seen

Severity: Varies **Component:** gss

Text: The token was valid, but is a duplicate of one that has already been received

Explanation: The token was a duplicate of an earlier token. Either this was caused by a network error or indicates the presence of an attacker.

Action: Application specific.

0x1286203f gssdce_s_message_late

Severity: Varies **Component:** gss

Text: The token was valid, but a later token has already been received.

Explanation: The token was valid, but a later token has already been received.

Action: Application specific.

0x1286203d gssdce_s_message_omitted

Severity: Varies **Component:** gss

Text: The token was valid, but an earlier token has not yet been received

Explanation: The token is valid, but an earlier token has not yet been received.

Action: Application specific.

0x12862040 gssdce_s_message_out_of_order

Severity: Varies **Component:** gss

Text: The token was valid, but is severely out of sequence.

Explanation: The token was valid, but is severely out of sequence.

Action: Application specific.

0x1286201c gssdce_s_name_required

Severity: Varies **Component:** gss

Text: A principal name must be given.

Explanation: **GSS_C_NO_NAME** was specified when a name is required.

Action: Specify a valid principal name.

0x1286204c gssdce_s_need_acceptor_context

Severity: Varies **Component:** gss

Text: The operation requires an acceptor context.

Explanation: An initiator context was supplied, but the operation requires an acceptor context.

Action: Supply a valid acceptor context.

0x12862036 gssdce_s_no_buffer

Severity: Varies **Component:** gss

Text: A required gss_buffer_t parameter was not supplied.

Explanation: A required gss_buffer_t parameter was not supplied.

Action: Supply a gss_buffer_t.

0x1286204e gssdce_s_no_conf

Severity: Varies **Component:** gss

Text: The context does not support confidentiality protection

Explanation: A request was made encrypt data, but privacy service is not available.

Action: Request only integrity protection.

0x12862017 gssdce_s_no_login_context

Severity: Varies **Component:** gss

Text: The caller has no default login context.

Explanation: An attempt was made to use a default login context when none had been established.

Action: Establish a login context before calling this routine.

0x1286204d gssdce_s_no_pac_available

Severity: Varies **Component:** gss

Text: The context did not contain a PAC.

Explanation: A request was made to extract a Privilege Attribute Certificate (PAC) from a login context that did not contain one.

Action: Use a login context that contains a PAC.

0x12862021 gssdce_s_no_rgy_available

Severity: Varies **Component:** gss

Text: The DCE registry could not be contacted.

Explanation: An attempt to translate between a Universal Unique Identifier (UUID) and a name failed.

Action: Check that the registry system is running.

0x1286204f gssdce_s_no_such_key

Severity: Varies **Component:** gss

Text: Internal error - A key usage other than PRIVACY or INTEGRITY was specified

Explanation: Internal error.

Action: Submit a problem report

0x12862024 gssdce_s_out_of_memory

Severity: Varies **Component:** gss

Text: Insufficient virtual memory for allocation attempt.

Explanation: An attempt to allocate dynamic memory failed due to one of the following conditions: .ML .LI A GSSAPI error occurred. .LI An application error occurred. .LI There is a system configuration problem. .LE

Action: Check your GSSAPI routine, application code, or system configuration.

0x12862025 gssdce_s_param_required

Severity: Varies **Component:** gss

Text: A required parameter was missing.

Explanation: An attempt to access a required parameter failed.

Action: Supply valid parameters in all required positions.

0x1286203c gssdce_s_reflected_packet

Severity: Varies **Component:** gss

Text: The token was not created by the remote peer.

Explanation: The token was not created by the remote peer. It was created locally. Either this was caused by a network error or it indicates the presence of an attacker.

Action: Application specific.

0x12862043 gssdce_s_seal_algorithm_not_allowed

Severity: Varies **Component:** gss

Text: The token is invalid. It specifies an encryption algorithm but claims not to provide privacy protection.

Explanation: The token is invalid. This could be caused by any of the following:
.ML .LI Network error .LI The presence of an attacker .LI An internal GSSAPI error
.LE

Action: Retry the operation. If the error occurs, submit a problem report.

0x12862045 gssdce_s_short_token

Severity: Varies **Component:** gss

Text: The token is invalid - It is too short

Explanation: The token is invalid. It is too short.

Action: Application specific.

0x12862046 gssdce_s_unexpected_token_type

Severity: Varies **Component:** gss

Text: The token is not the right type for the attempted use.

Explanation: You are using the wrong decoding operation for this type of token.

Action: Try one of the following: .ML .LI If the token was created using the gss_sign routine, use the gss_verify routine to read it. .LI If the token was created using the gss_seal routine, use the gss_unseal routine to read it. .LE

0x1286201a gssdce_s_unimplemented_feature

Severity: Varies **Component:** gss

Text: The requested feature is not implemented.

Explanation: The requested feature has not been implemented.

Action: None required.

0x1286201e gssdce_s_unknown_principal_name

Severity: Varies **Component:** gss

Text: The supplied principal name has not been registered.

Explanation: The principal name was not found in the registry.

Action: Register the principal name or supply another, registered name.

0x12862042 gssdce_s_unrecognized_token_type

Severity: Varies **Component:** gss

Text: The token is invalid. It is of an unrecognized type.

Explanation: The token is invalid. This could be caused by any of the following:
.ML .LI Network error .LI The presence of an attacker .LI An internal GSSAPI error
.LE

Action: Retry the operation. If the error recurs, submit a problem report.

0x12862044 gssdce_s_unsupported_encryption_algorithm

Severity: Varies **Component:** gss

Text: The token is invalid. It specifies an unsupported encryption algorithm.

Explanation: The token is invalid.

Action: Application specific.

0x12862026 gssdce_s_unsupported_mechanism

Severity: Varies **Component:** gss

Text: The specified security mechanism is not supported.

Explanation: The specified security mechanism is not supported.

Action: Specify a supported mechanism.

0x12862032 gssdce_s_unsupported_name_type

Severity: Varies **Component:** gss

Text: The specified name type is not recognized.

Explanation: An invalid or unsupported name-type was specified.

Action: Specify a supported name-type, or use the default name-type

0x12862041 gssdce_s_unsupported_signature_algorithm

Severity: Varies **Component:** gss

Text: The token is invalid. It specifies an unsupported integrity algorithm

Explanation: The token is invalid. It specifies an unsupported integrity algorithm

Action: Application specific.

0x12862134 gss_s_ac_bad_cred

Severity: Error **Component:** gss/gss_s_auth

Text: Couldn't resolve credential in gss_accept_sec_ctx

Explanation:

Action:

0x12862131 gss_s_ac_bad_ctx

Severity: Error **Component:** gss/gss_s_auth

Text: Couldn't resolve context in gss_accept_sec_ctx

Explanation:

Action:

0x12862132 gss_s_ac_bad_ctx_state

Severity: Error **Component:** gss/gss_s_auth

Text: Context state is invalid in gss_accept_sec_ctx

Explanation:

Action:

0x12862137 gss_s_ac_bad_token_wrapper

Severity: Error **Component:** gss/gss_s_auth

Text: Token wrapper was invalid in gss_accept_sec_ctx

Explanation:

Action:

0x1286213b gss_s_ac_bad_tok_type

Severity: Error **Component:** gss/gss_s_auth

Text: Bad token type (%2.2x %2.2x) in gss_accept_sec_ctx

Explanation:

Action:

0x128620e1 gss_s_ac_bad_usage

Severity: Error **Component:** gss/gss_s_general

Text: Acquire_cred - Bad usage parameter

Explanation: Invalid value for usage parameter

Action:

0x1286214a gss_s_ac_bindings_mismatch

Severity: Error **Component:** gss/gss_s_auth

Text: Channel-bindings mismatch

Explanation:

Action:

0x12862143 gss_s_ac_cei_failed

Severity: Error **Component:** gss/gss_s_auth

Text: Cred_expand_id failed in gss_accept_sec_ctx (%x)

Explanation:

Action:

0x12862157 gss_s_ac_cli_name_noconv

Severity: Error **Component:** gss/gss_s_auth

Text: Couldn't convert client name (%x)

Explanation:

Action:

0x128620e4 gss_s_ac_cred_nomem1

Severity: Error **Component:** gss/gss_s_general

Text: Acquire_cred - Out of memory creating cred (pt1)

Explanation: Out of heap memory

Action:

0x128620e5 gss_s_ac_cred_nomem2

Severity: Error **Component:** gss/gss_s_general

Text: Acquire_cred - Out of memory creating cred (pt2)

Explanation: Out of heap memory

Action:

0x12862135 gss_s_ac_ctx_nomem

Severity: Error **Component:** gss/gss_s_auth

Text: Couldn't create context in gss_accept_sec_ctx

Explanation:

Action:

0x12862149 gss_s_ac_hash_bad_length

Severity: Error **Component:** gss/gss_s_auth

Text: Bindings length wrong (should be %d, was %d)

Explanation:

Action:

0x128620e3 gss_s_ac_ini_failed

Severity: Error **Component:** gss/gss_s_general

Text: Acquire_cred - Inquire_net_info failed (%x)

Explanation: The error code shown was returned by inquire_net_info

Action:

0x12862161 gss_s_ac_inv_deleg

Severity: Error **Component:** gss/gss_s_auth

Text: Delegation inconsistency

Explanation:

Action:

0x1286213a gss_s_ac_inv_mech

Severity: Error **Component:** gss/gss_s_auth

Text: Invalid mechanism in token in gss_accept_sec_ctx

Explanation:

Action:

0x128621da gss_s_ac_lcc_failed

Severity: Error **Component:** gss/gss_s_general

Text: login_context_to_cred failed (%x) in gss_accept_sec_context

Explanation:

Action:

0x128620e0 gss_s_ac_named_init

Severity: Error **Component:** gss/gss_s_general

Text: Attempt to acquire INIT cred by name

Explanation: This is unsupported

Action:

0x12862144 gss_s_ac_names_differ

Severity: Warning **Component:** gss/gss_s_auth

Text: Ticketed server name differs from explicit credential

Explanation:

Action:

0x1286215e gss_s_ac_no_deleg1

Severity: Error **Component:** gss/gss_s_auth

Text: Can't become delegate (%x)

Explanation:

Action:

0x12862160 gss_s_ac_no_deleg2

Severity: Error **Component:** gss/gss_s_auth

Text: Can't become impersonator (%x)

Explanation:

Action:

0x1286215d gss_s_ac_no_lc

Severity: Error **Component:** gss/gss_s_auth

Text: Can't get login=context for delegation (%x)

Explanation:

Action:

0x12862136 gss_s_ac_nomem1

Severity: Error **Component:** gss/gss_s_auth

Text: No memory for mech-OID copy in gss_accept_sec_ctx

Explanation:

Action:

0x12862146 gss_s_ac_nomem2

Severity: Error **Component:** gss/gss_s_auth

Text: No memory to copy client name

Explanation:

Action:

0x128620e2 gss_s_ac_noname_default

Severity: Error **Component:** gss/gss_s_general

Text: Couldn't find name in default context (%x)

Explanation: The default context has no name

Action:

0x1286214c gss_s_ac_no_pac_name

Severity: Error **Component:** gss/gss_s_auth

Text: Can't get name from PAC (%x)

Explanation:

Action:

0x12862130 gss_s_ac_null_ctx

Severity: Error **Component:** gss/gss_s_auth

Text: Error - NULL context handle in gss_accept_sec_ctx

Explanation:

Action:

0x128620e7 gss_s_ac_reg_failed

Severity: Error **Component:** gss/gss_s_general

Text: Acquire_cred - Server_register_auth_info failed (%x)

Explanation: Couldn't register a principal

Action:

0x12862153 gss_s_ac_skbr_failed

Text: Invalid context state in gss_extract_PAC_from_sec_context

Explanation:

Action:

0x128621a7 gss_s_xps_no_pac

Severity: Warning **Component:** gss/gss_s_general

Text: Attempt to extract PAC from non-PAC-based context

Explanation:

Action:

0x1260afa6 GST_CONVCHAR_MISSING

Severity: Warning **Component:** gds/GDS_S_STEP

Text: An invalid conversion character is found in message 0x%lx.

Explanation: The message with the specified index contains a format element with an invalid conversion character.

Action: This problem should not occur and cannot be corrected by a user or system administrator. Report the problem to the responsible software engineer.

0x1260afa5 GST_ERR_OVERFLOW

Severity: Fatal **Component:** gds/GDS_S_STEP

Text: Error overflow.

Explanation: The evaluation tool **gstep** has detected more than 100 errors in log entries.

Action: This problem should not occur and cannot be corrected by a user or system administrator. Report the problem to the responsible software engineer.

0x1260afa0 GST_INV_DEBUG_LEVEL

Severity: Fatal **Component:** gds/GDS_S_STEP

Text: Invalid debug level %ld.

Explanation: The evaluation tool **gstep** was called with an invalid debug level.

Action: Call **gstep** with a correct debug level in the range from 0 to 9.

0x1260afa3 GST_LOGCLOSE_ERR

Severity: Fatal **Component:** gds/GDS_S_STEP

Text: The specified logfile cannot be closed, error status: 0x%lx.

Explanation: The evaluation tool **gstep** could not close the specified logfile.

Action: This problem should not occur and cannot be corrected by a user or system administrator. Evaluate **error status** for the reason. Report the problem to the responsible software engineer.

0x1260afa2 GST_LOGOPEN_ERR

Severity: Fatal **Component:** gds/GDS_S_STEP

Text: The specified logfile cannot be opened, error status: 0x%lx.

Explanation: The evaluation tool **gstep** could not open the specified logfile.

Action: Evaluate **error status** for the reason. Values are found in **dce_svc.h**. Depending on the reason, possible actions are:

- Change the access mode of the file.
- Create the file.
- Report the problem to the responsible software engineer.

0x1260afa7 GST_LOGREAD_ERR

Severity: Warning **Component:** gds/GDS_S_STEP

Text: A logged data element could not be read from the logfile. Error Status: 0x%lx.

Explanation: The logfile contains inconsistent data.

Action: This problem should not occur and cannot be corrected by a user or system administrator. Report the problem to the responsible software engineer.

0x1260afa1 GST_NO_LOGFILE

Severity: Fatal **Component:** gds/GDS_S_STEP

Text: Logfile name is missing.

Explanation: The evaluation tool **gstep** was called without a logfile name parameter.

Action: Specify the name of the logfile when calling the evaluation tool.

0x1260afa4 GST_OFFSET_ERR

Severity: Fatal **Component:** gds/GDS_S_STEP

Text: An entry with the specified offset could not be found. Error_status: 0x%lx.

Explanation: The evaluation tool **gstep** could not find the log entry with the specified offset.

Action: Call **gstep** with a valid offset.

0x1260ae32 gsu_access_right_failed

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: Cannot access file %s.\n

Explanation: Access to the specified file was not granted because of insufficient rights.

Action: Change the access rights of the file and try again.

0x1260ae2e gsu_config_type_failed

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: Invalid configuration type.\n

Explanation: The configuration type is C for client system and S for client/server system.

Action: Specify the correct configuration type and try again

0x1260ae28 gsu_default_schema_failed

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: Invalid value for \"Use default schema\".\n

Explanation: An invalid value was specified for the \"use default schema\" prompt. The valid values are:

- For a client system is not allowed.
- For a initial client/server system is Y.
- For a client/server system with non-GDS DSAs, or DSAs that do not constitute an administrative domain is Y.
- For a client/servar system, local DSA and initial DSA constitute an administration domain and use the default schema is Y.
- For a client/server system, local DSA and initial DSA constitute an administration domain and do not use the default schema is N.

Action: specify it and try again

0x1260ae43 gsu_dirid_client_no_overwrite

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: Directory id %d already configured as a client system and overwrite switch was not set.\n

Explanation: The specified directory id was already configured as a client system and overwrite switch was not specified by the user.

Action: Specify the overwrite switch and try again.

0x1260ae44 gsu_dirid_server_no_overwrite

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: Dir id %d already configured as a client/server system and overwrite switch was not set.\n

Explanation: The specified directory id was already configured as a client/server system and overwrite switch was not specified by the user.

Action: Specify the overwrite and try again.

0x1260ae11 gsu_existing_error

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: File %s does not exist\n

Explanation: The specified file does not exist.

Action: Check if the specified file exists. If it exists, check the access rights of the file.

0x1260ae13 gsu_fclose_error

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: File %s could not be closed.\n

Explanation: The program could not close the specified file.

Action: Contact your system administrator.

0x1260ae12 gsu_fopen_error

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: File %s could not be opened.\n

Explanation: The program could not open the specified file.

Action: Check if the specified file exists. If it exists, check the access rights of the file.

0x1260ae38 gsu_input_file_poss

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: Too many files specified.\n

Explanation: Too many input files were specified by the user.

Action: Invoke gdssetup again with only one input file name.

0x1260ae14 gsu_inter_write_error

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: Could not write into file %s.\n

Explanation: The program could not write into the specified file.

Action: Check the access rights of the file.

0x1260ae2c gsu_local_schema_error

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: Invalid value for \"Local schema is master\".\n

Explanation: An invalid value was specified for the \"Local schema is master\" prompt. The valid values are:

- For a client server system it is not allowed.
- For an initial client/server system it is Y.
- For a client/server system with non-GDS DSAs, or DSAs that do not constitute an administrative domain is it Y.
- For a client/server system, local DSA, and initial DSA constitute an administration domain and use the default schema is it N.
- For a client/server system, local DSA and initial DSA constitute an administration domain and do not use the default schema is it N.

Action: Specify a valid value and try again

0x1260ae2f gsu_max_clients

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: Maximal number of clients is %d.\n

Explanation: Number of clients exceeds the maximum.

Action: Change the number of clients in the file and try again.

0x1260ae31 gsu_max_dir_id

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: Maximal directory ID number is %d.\n

Explanation: Directory ID exceeds the maximum.

Action: Change the directory ID in the file and try again.

0x1260ae30 gsu_max_servers

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: Maximal number of servers is %d.\n

Explanation: Number of servers exceeds the maximum.

Action: Change the number of servers in the file and try again.

0x1260ae29 gsu_missing_local_dsa_name

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: Missing local DSA name.\n

Explanation: The DSA name has not been specified in the file.

Action: Specify the DSA name in file and try again.

0x1260ae2a gsu_missing_principal_name

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: Missing principal name.\n

Explanation: The principal name has not been specified in the file.

Action: Specify the principal name and try again.

0x1260ae2b gsu_missing_psap_name

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: Missing the PSAP address for %s.\n

Explanation: The PSAP address was not specified for the DSA.

Action: Specify the PSAP address and try again.

0x1260ae3a gsu_psap_must_same

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: The PSAP address of DSA %s differs from that of the local DSA.\n

Explanation: The PSAP address of the specified DSA was not the same as that of the local DSA.

Action: Correct the PSAP address and try again.

0x1260ae27 gsu_readline_dsas_found

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: PSAP string \"%s\" not found in %s.\n

Explanation: The prompt string for PSAP address was not found in the parameter file.

Action: Specify it and try again.

0x1260ae39 gsu_secur_false

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: Invalid security method.\n

Explanation: An invalid security method was specified. The valid values are:

- DCE
- simple
- simple,DCE

Action: Specify a valid security method and try again.

0x1260ae15 gsu_unknown_switch

Severity: Fatal **Component:** gds/GDS_S_SETUP

Text: Unknown option %s\n

Explanation: The user supplied option was unknown.

Action: Specify a valid option and try again.

————- **KDDS01104-E**

Severity: Notice **Component:** dfa/dfa_s_agent

Text: Agent is being terminated. No command accepted.

Explanation: Agent does not accept commands because 'dfaagt -s' was entered to terminate AGENT.

Action: Not required. If an immediate termination is required, enter dfaagt -a (termination with 'emergency exit' option).

——— **KDDS01105-E**

Severity: Notice **Component:** dfa/dfa_s_agent

Text: Agent is taking emergency exit. No command accepted.

Explanation: Agent does not accept commands because 'dfaagt -a' was entered to take an emergency exit.

Action: Not required.

——— **KDDS01106-E**

Severity: Fatal **Component:** dfa/dfa_s_agent

Text: Unexpected command error (xxx).

Explanation: An unexpected error occurred while a command was being executed. (xxx: error information.)

Action: Report to DCE administrator or File-Access administrator.

——— **KDDS01107-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Failed to set locale: C locale is assumed (xxx).

Explanation: Failed to localize commands due to the cause described by 'xxx.' The default (C) is assumed and the process is continuing.

Action: Check the localization environment.

——— **KDDS01300-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Failed to open master key file. File has no access right.

Explanation: Failed to open master key file because master key file was not granted access right.

Action: Set proper access right to master key file.

——— **KDDS01301-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Gateway xxx is not registered with master key file.

Explanation: Gateway xxx is not registered with master key file (/etc/dfakey).

Action: Check if the gateway name is registered.

——— **KDDS01302-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Agent administrator is not registered with master key file.

Explanation: Agent administrator (or, administrator who can execute 'setdfakey' command) is not registered with master key file (/etc/dfakey).

Action: Set the agent administrator name, then try again.

——— **KDDS01303-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Cannot execute setdfakey command.

Explanation: An unauthorized user (or, a user not registered with master key file as agent administrator) attempted 'setdfakey' command.

Action: Ask agent administrator to run the command.

——— **KDDS01304-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Cannot execute setdfakey command due to unmatched master keys.

Explanation: The first master key does not match the second master key.

Action: Retry setdfakey.

——— **KDDS01305-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Failed to write to master key file: xxx.

Explanation: Failed to write to master key file due to the shown cause. (xxx: cause).

Action: Check the cause, and see if the environment for setdfakey is appropriate.

——— **KDDS01306-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Selected gateway xxx does not exist in /etc/hosts file.

Explanation: The selected gateway server name (xxx) is not registered in /etc/hosts file.

Action: Register the server name with /etc/hosts file, then try setdfakey command again.

——— **KDDS01307-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Agent is running. Cannot execute setdfakey command.

Explanation: Setdfakey command was entered while agent is running. To reserve the consistency of master key file, setdfakey command is rejected when agent is running.

Action: Stop agent, then retry setdfakey.

——— **KDDS01308-E**

Severity: Fatal **Component:** dfa/dfa_s_agent

Text: Unexpected error (xxx) occurred to setdfakey command.

Explanation: An unexpected error occurred while setdfakey command is being executed. xxx shows error information.

Action: Report to DCE administrator or File-Access administrator.

——— **KDDS01309-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Setlocale failed, continuing with C locale: xxx

Explanation: Failed to localize commands due to the cause described by 'xxx.' The default ('C') is assumed and the process is continuing.

Action: Check the localization environment.

————- **KDDS01310-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Invalid option

Explanation: Invalid option or invalid option value is detected.

Action: Check the selected option or option value.

————- **KDDS02000-I**

Severity: Notice **Component:** dfa/dfa_s_agent

Text: Started agent initialization.

Explanation: The initialization of agent has started.

Action: Not required.

————- **KDDS02001-I**

Severity: Notice **Component:** dfa/dfa_s_agent

Text: Agent successfully initialized.

Explanation: The initialization of agent is successfully completed. Now agent takes communication requests from gateway.

Action: Not required.

————- **KDDS02002-I**

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: Agent will be terminated in n sec.

Explanation: Agent started the termination process, and will stop in n seconds. Agent does not accept any connection requests from gateway.

Action: Not required.

————- **KDDS02003-I**

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: Agent will take an emergency exit.

Explanation: Agent started to take an emergency exit.

Action: Not required.

———— **KDDS02004-I**

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: Agent successfully terminated.

Explanation: Agent has terminated.

Action: Not required.

———— **KDDS02005-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Agent is already up and running.

Explanation: Agent is already up and running, but dfaagt command was entered to start agent.

Action: No need to start agent. If restarting of agent is required, terminate the ongoing agent, then start again.

———— **KDDS02006-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to start agent.

Explanation: Cannot start agent due to an error in initializing agent.

Action: Refer to the messages on the DFS client console and syslog, and check if the environment of agent is normal.

———— **KDDS02007-E**

Severity: Fatal **Component:** dfa/dfa_s_agent

Text: Agent terminated due to an unexpected error. (xxx)

Explanation: Agent was terminated because agent detected a fatal error. Core dump may be output. The additional information (described by xxx) is for analytical purposes: may not always be displayed.

Action: Report to DCE administrator or File-Access administrator. To find the cause of the error, DCE administrator is recommended to analyze the messages on the DFS client console and syslog. Report to maintenance service if necessary.

——— **KDDS02008-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Start dfaagt with Supervisor mode. (xxx)

Explanation: dfaagt was started by a user who is not in the Supervisor mode. (xxx: additional information)

Action: Get into Supervisor mode, and start dfaagt again.

——— **KDDS02030-E**

Severity: Fatal **Component:** dfa/dfa_s_agent

Text: Trace process terminated due to an unexpected error. (xxx)

Explanation: Trace is terminated because agent detected a fatal error. Core dump may be output. The additional information (described by xxx) is for analytical purposes: may not always be displayed.

Action: Report to DCE administrator or File-Access administrator. To find the cause of the error, DCE administrator is recommended to analyze the messages on the DFS client console and syslog. Report to maintenance service if necessary.

——— **KDDS02031-E**

Severity: Fatal **Component:** dfa/dfa_s_agent

Text: System communication process terminated due to an unexpected error. (xxx)

Explanation: System communication process is terminated because agent detected a fatal error. Core dump may be output. The additional information (described by xxx) is for analytical purposes: may not always be displayed.

Action: Report to DCE administrator or File-Access administrator. To find the cause of the error, DCE administrator is recommended to analyze the messages on the DFS client console and syslog. Report to maintenance service if necessary.

——— **KDDS02032-E**

Severity: Fatal **Component:** dfa/dfa_s_agent

Text: Administration process terminated due to an unexpected error. (xxx)

Explanation: Administration process is terminated because agent detected a fatal error. This message is also displayed when gateway is terminated before agent is terminated. Core dump may be output. The additional information (described by xxx) is for analytical purposes: may not always be displayed.

Action: Check if gateway is stopped. If gateway is running, report to DCE administrator or File-Access administrator. To find the cause of the error, DCE administrator is recommended to analyze the messages on the DFS client console and syslog. Report to maintenance service if necessary.

———— **KDDS02033-E**

Severity: Fatal **Component:** dfa/dfa_s_agent

Text: Watchdog process terminated due to an unexpected error. (xxx)

Explanation: Watchdog process is terminated because agent detected a fatal error. Core dump may be output. The additional information (described by xxx) is for analytical purposes: may not always be displayed.

Action: Report to DCE administrator or File-Access administrator. To find the cause of the error, DCE administrator is recommended to analyze the messages on the DFS client console and syslog. Report to maintenance service if necessary.

———— **KDDS02034-E**

Severity: Fatal **Component:** dfa/dfa_s_agent

Text: User communication process terminated due to an unexpected error. (xxx)

Explanation: User communication process is terminated because agent detected a fatal error. This message is also displayed when gateway is terminated before agent is terminated. Core dump may be output. The additional information (described by xxx) is for analytical purposes: may not always be displayed.

Action: Check if gateway is stopped. If gateway is running, report to DCE administrator or File-Access administrator. To find the cause of the error, DCE administrator is recommended to analyze the messages on the DFS client console and syslog. Report to maintenance service if necessary.

———— **KDDS02100-I**

Severity: Notice **Component:** dfa/dfa_s_agent

Text: Stopped outputting trace information to file

Explanation: Outputting trace information to trace file is stopped.

Action: Not required.

————- **KDDS02101-I**

Severity: Notice **Component:** dfa/dfa_s_agent

Text: Stopped outputting trace information of process xxx.

Explanation: Outputting trace information of process xxx is stopped.

Action: Not required.

————- **KDDS02102-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Failed to open trace file. (xxx)

Explanation: Failed to open trace file due to the cause (described by xxx) shown.

Action: Analyze the cause of the failure, and check the environment of agent.

————- **KDDS02103-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Failed to access trace file. xxx:yyy (zzz)

Explanation: Access to trace file failed due to the cause shown:

- xxx: attempted operation
- yyy: cause of failure
- zzz: additional information

The additional information is for analytical purposes: may not always be displayed.

Action: Analyze the cause of the failure, and check the environment of agent.

————- **KDDS02130-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Cannot fork: Agent cannot take connection requests from gateway. xxx:yyy (zzz)

Explanation: Agent failed to generate child processes due to the cause shown: Agent has rejected the connection requests from gateway.

- xxx: attempted operation
- yyy: cause of failure
- zzz: additional information

The additional information is for analytical purposes: may not always be displayed.

Action: Analyze the cause of the failure, and check the environment of agent.

———— **KDDS02131-I**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Number of connections exceeds the limit: Agent cannot take connection requests from gateway xxx.

Explanation: The number of connections exceeds the limit: Agent has rejected the connection requests from gateway xxx.

Action: Check the system configuration and environment of agent.

———— **KDDS02132-I**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Termination of agent is in progress: Agent cannot take connection requests from gateway xxx.

Explanation: The termination process of agent is in progress: Agent rejects the connection requests from gateway xxx.

Action: Not required.

———— **KDDS02133-I**

Severity: Warning **Component:** dfa/dfa_s_agent

Text: Connect request refused: unknown gateway. xxx

Explanation: None.

Action: ?

————- **KDDS02134-I**

Severity: Fatal **Component:** dfa/dfa_s_agent

Text: Fatal error occurred in gateway xxx.

Explanation: The gateway xxx reported a fatal error. Agent will inspect the status of the connection with gateway xxx, and reset the connection if necessary. This message is also displayed when gateway is terminated before agent is terminated.

Action: Check if gateway is stopped. If gateway is running, report to DCE administrator and File-Access administrator. To find the cause of the error, DCE administrator is recommended to analyze the messages on the DFS client console and syslog. Report to maintenance service if necessary.

————- **KDDS02135-I**

Severity: Fatal **Component:** dfa/dfa_s_agent

Text: Re-connection occurred in gateway xxx.

Explanation: Re-connection was reported from gateway xxx. Agent will inspect the status of the connection with gateway xxx, and reset the connection if necessary.

Action: Report to DCE administrator and File-Access administrator. To find the cause of the error, DCE administrator is recommended to analyze the messages on the DFS client console and syslog. Report to maintenance service if necessary.

————- **KDDS02160-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Failed to open status logging file. xxx

Explanation: Failed to open status logging file due to the cause (described by xxx) shown.

Action: Analyze the cause of the failure, and check the environment of agent.

————- **KDDS02161-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Failed to access status logging file. xxx:yyy (zzz)

Explanation: Access to status logging file failed due to the cause shown:

- xxx: attempted operation
- yyy: cause of failure
- zzz: additional information

The additional information is for analytical purposes: may not always be displayed.

Action: Analyze the cause of the failure, and check the environment of agent.

———— KDDS02220-E

Severity: Fatal **Component:** dfa/dfa_s_agent

Text: No sanity check response returned from gateway xxx.

Explanation: The gateway xxx does not return a sanity check response. agent assumes gateway xxx has a fatal error, and invokes appropriate processes.

Action: Check the behavior and network statuses of the target gateway, as well as the environment of agent.

———— KDDS02250-E

Severity: Error **Component:** dfa/dfa_s_agent

Text: Failed to change DCE effective login period. aaa:xxx yyy:zzz

Explanation: Failed to change DCE effective login period of the shown DCE user due to the cause shown:

- aaa: DCE user name
- xxx: DCE effective login period
- yyy: attempted operation
- zzz: cause of failure

DCE effective login period is the time and date when the DCE user is automatically logged out from DCE.

Action: Analyze the cause of the failure, and check the environment of DCE and agent.

————- **KDDS02251-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Effective period of DCE password expired. xxx

Explanation: The effective period of the DCE password has expired. (xxx is the DCE user name.)

Action: Ask the DCE user shown by 'DCE user name' to change the password.

————- **KDDS02252-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Failed to access master key file. xxx:yyy (zzz)

Explanation: The master key file access (shown by yyy) failed due to the cause shown by xxx.

Action: Analyze the cause of the failure, and check the environment of agent.

————- **KDDS02280-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Failed to generate trace process. xxx

Explanation: Failed to fork trace process due to the displayed (by xxx) cause. The output of the trace information will be thinned.

Action: Analyze the cause of the failure, and check the environment of agent.

————- **KDDS02281-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Failed to generate system communication process. xxx

Explanation: Failed to fork system communication process due to the displayed (by xxx) cause. Agent will be stopped.

Action: Analyze the cause of the failure, and check the environment of agent.

————- **KDDS02282-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: DFS client is not ready to run.

Explanation: The DFS client daemon process is not running. Agent was terminated due to the DFS client's incomplete environment.

Action: Restart agent after the DFS client environment is completed.

———— **KDDS02283-I**

Severity: Error **Component:** dfa/dfa_s_agent

Text: TCP/IP Port Number xxx is equal or smaller than 5000.

Explanation: The number 5000 or less is assigned to the TCP/IP port number that is used by agent. The initialization continues though system has a priority to employ such a number.

Action: Assign a number greater than 5000 to /etc/services file.

———— **KDDS02300-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Trace process terminated: xxx

Explanation: Trace process has been terminated. The termination information (described by xxx) shows the information for error analysis.

Action: Not required.

———— **KDDS02301-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: System communication process terminated: xxx

Explanation: System communication process has been terminated. The termination information (described by xxx) is for error analysis.

Action: Not required.

———— **KDDS02330-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Failed to send a message: xxx yyy

Explanation: Failed to send a message to gateway shown by the gateway name (described by xxx). yyy shows the beginning of the attempted message. Cannot

use the message-send connection with agent. A possible cause is 'initialization of gateway communication is in progress' or 'an error occurred to network.'

Action: Check the connection with gateway.

——— **KDDS02500-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Agent failed to get memory. xxx (yyy)

Explanation: Agent could not get memory due to the reason shown:

- xxx: cause of failure
- yyy: additional information

The additional information is for analytical purposes: may not always be displayed.

Action: Analyze the cause of the failure, and check the environment of agent.

——— **KDDS02520-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Agent failed to get shared memory. xxx:yyy (zzz)

Explanation: Agent could not get shared memory due to the reason shown:

- xxx: attempted operation
- yyy: cause of failure
- zzz: additional information

The additional information is for analytical purposes: may not always be displayed.

Action: Analyze the cause of the failure, and check the environment of agent.

——— **KDDS02521-I**

Severity: Notice **Component:** dfa/dfa_s_agent

Text: Shared memory already allocated: will be re-allocated. (xxx)

Explanation: The shared memory with the key of agent has already been assigned. The shared memory will be re-allocated, and agent will be initialized. The additional

information (described by xxx) is for analytical purposes: may not always be displayed.

Action: Not required.

———— **KDDS02540-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Failed to access semaphore. xxx:yyy (zzz)

Explanation: Agent could not access a semaphore due to the reason shown:

- xxx: attempted operation
- yyy: cause of failure
- zzz: additional information

The additional information is for analytical purposes: may not always be displayed.

Action: Analyze the cause of the failure, and check the environment of agent.

———— **KDDS02560-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Failed to open socket. xxx (yyy)

Explanation: Agent could not open a socket due to the reason shown:

- xxx: cause of failure
- yyy: additional information

The additional information is for analytical purposes: may not always be displayed.

Action: Analyze the cause of the failure, and check the environment of agent.

———— **KDDS02561-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Failed to bind an address to the socket. xxx:yyy (zzz)

Explanation: Due to the reason shown, agent could not tie the socket with the address shown by 'address.'

- xxx: address

- yyy: cause of failure
- zzz: additional information

The additional information is for analytical purposes: may not always be displayed.

Action: Analyze the cause of the failure, and check the environment of agent.

————- **KDDS02562-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Network error. xxx:yyy (zzz)

Explanation: During the communication with the gateway xxx, a network error occurred due to the reason shown:

- xxx: gateway name
- yyy: cause of failure
- zzz: additional information

The erroneous connection has been disconnected. The additional information is for analytical purposes: may not always be displayed.

Action: Analyze the cause of the failure, and check the network status, and the environment of agent and gateway.

————- **KDDS02563-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Timeout occurred receiving data from gateway xxx.

Explanation: During the data receiving from gateway xxx, a timeout occurred; The erroneous connection has been disconnected.

Action: Analyze the cause of the failure, and check the network status and the environment of agent and gateway.

————- **KDDS02564-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Communication error: aaa xxx:yyy (zzz)

Explanation: During the communication with the gateway shown by 'gateway name,' a network error occurred when the operation shown by 'attempted operation' was attempted, due to the reason shown:

- aaa: gateway name
- xxx: attempted operation
- yyy: cause of failure
- zzz: additional information

The erroneous connection has been disconnected. The additional information is for analytical purposes: may not always be displayed.

Action: Analyze the cause of the failure, and check the network status, and the environment of agent and gateway.

———— **KDDS02580-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: File system full. xxx:yyy (zzz)

Explanation: The operation shown failed due to the reason shown:

- xxx: attempted operation
- yyy: cause of failure
- zzz: additional information

The additional information is for analytical purposes: may not always be displayed.

Action: Analyze the cause of the failure, and check the environment of agent.

———— **KDDS02600-E**

Severity: Error **Component:** dfa/dfa_s_agent

Text: Failed to fork. xxx (yyy)

Explanation: Agent failed to generate a child process due to the reason shown:

- xxx: cause of failure
- yyy: additional information

The additional information is for analytical purposes: may not always be displayed.

Action: Analyze the cause of the failure, and check the environment of agent.

————- **KDDS02620-E**

Text: Screens cannot be displayed due to memory shortage.

Explanation: NetWare may have run out of memory.

Action: Consult NetWare troubleshooting manuals.

————- **KDDS10028-E**

Severity: Error **Component:** dfa/dfa_s_admin

Text: Administration utility cannot run on this NetWare version.

Explanation: Administration utility runs only on NetWare 3.12.

Action: Check if the NetWare version is NetWare 3.12.

————- **KDDS10029-E**

Severity: Error **Component:** dfa/dfa_s_admin

Text: Screens cannot be generated due to memory shortage.

Explanation: NetWare server may have run out of memory.

Action: Consult NetWare troubleshooting manuals.

————- **KDDS10030-E**

Severity: Error **Component:** dfa/dfa_s_admin

Text: Administration utility detected self-contradiction: error code xxx.

Explanation: Administration utility detected an internal error. xxx describes the error code.

Action: Report to maintenance service.

————- **KDDS11001-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: DFA.NLM cannot run on this NetWare version.

Explanation: The gateway starting command (DFA.NLM) was not executed on a NetWare 3.12 server.

Action: Run the starting command on a NetWare 3.12 server.

——— **KDDS11002-E**

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: DFA.NLM has different interface version from %s.

Explanation: ?

Action: ?

——— **KDDS11003-I**

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: Gateway initialization started.

Explanation: ?

Action: ?

——— **KDDS11004-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to start xxx.

Explanation: Initialization failed to start administration or watchdog thread.
(Admin or watchdog thread is described by xxx)

Action: See the error message issued by each thread.

——— **KDDS11005-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: NWAddFSMonitorHook failed: error code xxx.

Explanation: NetWare API error (described by xxx) occurred.

Action: Report to maintenance service.

——— **KDDS11006-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: NWRegisterNCPEExtension failed: error code xxx.

Explanation: NetWare API error (described by xxx) occurred.

Action: Report to maintenance service.

——— **KDDS11007-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: BeginThreadGroup failed: error code xxx.

Explanation: NetWare API error (described by xxx) occurred.

Action: Report to maintenance service.

——— **KDDS11008-W**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: DFA.NLM requires 3.12g or newer version of CLIB.NLM.

Explanation: The loaded CLIB.NLM is older than 3.12g.

Action: DFA.NLM does not support a CLIB.NLM older than 3.12g. Use a newer version.

——— **KDDS11009-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: GetVolumeNumber failed: error code xxx.

Explanation: NetWare API error (described by xxx) occurred.

Action: Report to maintenance service.

——— **KDDS11010-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: AdvertiseService failed: error code xxx.

Explanation: NetWare API error (described by xxx) occurred.

Action: Report to maintenance service.

——— **KDDS11011-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to suspend MainThread.

Explanation: NetWare API error occurred.

Action: Report to maintenance service.

——— **KDDS11012-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to initialize gateway: error code xxx.

Explanation: An error occurred during initialization.

Action: See the remedy shown in the message prior to this message.

——— **KDDS11015-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Volume xxx is invalid or not mounted.

Explanation: The selected volume (described by xxx) does not exist, or the volume is not mounted.

Action: Use administration utility to select an appropriate volume name. Or, use NetWare Install utility to mount the volume.

——— **KDDS11016-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Invalid syntax in DFS path.

Explanation: The selected DFS path is invalid.

Action: Use administration utility to select an appropriate DFS path (i.e., one that begins with ../../cellname/fs).

——— **KDDS11017-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Invalid hostname.

Explanation: The selected host does not exist, or an incorrect hostname was selected.

Action: See if the selected hostname is in SYS:\\ETC\\HOSTS file. Or, use administration utility to select an appropriate hostname.

——— **KDDS11018-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to open logfile xxx.

Explanation: Could not open the logfile (described by xxx).

Action: See if the file is read only, or the file is not open.

——— **KDDS11034-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: DFA.NLM detected self-contradiction.

Explanation: A self-contradicting error occurred while DFA.NLM was running.

Action: Re-start gateway. If the error still occurs, report to maintenance service.

——— **KDDS11035-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to get memory dump.

Explanation: ?

Action: ?

——— **KDDS11036-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: ResumeThread failed: error code xxx.

Explanation: NetWare API error (described by xxx) occurred.

Action: Report to maintenance service.

——— **KDDS11037-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Insufficient memory.

Explanation: Failed to get a work area.

Action: Terminate other server applications, and retry.

———— KDDS11039-E

Severity: Error **Component:** dfa/dfa_s_gateway

Text: GetServerInformation failed: error code xxx.

Explanation: NetWare API error (described by xxx) occurred.

Action: Report to maintenance service.

———— KDDS11040-E

Severity: Error **Component:** dfa/dfa_s_gateway

Text: GetFileServerID failed: error code xxx.

Explanation: NetWare API error (described by xxx) occurred.

Action: Report to maintenance service.

———— KDDS11041-E

Severity: Error **Component:** dfa/dfa_s_gateway

Text: GetVolumeStatistics failed: error code xxx.

Explanation: NetWare API error (described by xxx) occurred.

Action: Report to maintenance service.

———— KDDS11046-E

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to read gateway volume options.

Explanation: The information set for gateway volume options contains invalid data.

Action: Use administration utility to set correct data.

———— KDDS11047-E

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to read agent options.

Explanation: The information set for agent options contains invalid data.

Action: Use administration utility to set correct data.

————- **KDDS11048-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to read gateway Other options.

Explanation: The information set for gateway Other options contains invalid data.

Action: Use administration utility to set correct data.

————- **KDDS11049-I**

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: Gateway initialization completed normally.

Explanation: ?

Action: ?

————- **KDDS11050-I**

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: AdminThread detected timeout. AdminThread will be restarted.

Explanation: ?

Action: ?

————- **KDDS11051-I**

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: Gateway process termination started.

Explanation: ?

Action: ?

————- **KDDS11052-I**

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: Gateway process will be terminated.

Explanation: ?

Action: ?

———— **KDDS11053-I**

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: Gateway global resources are being freed.

Explanation: ?

Action: ?

———— **KDDS11201-E**

Severity: Fatal **Component:** dfa/dfa_s_gateway

Text: Gateway detected self-contradiction: error code xxx.

Explanation: Self-contradiction was detected in the gateway internal processing.

Action: Report to administrator. The administrator will take gateway logging and trace.

———— **KDDS11202-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Invalid SYS:\\ETC\\HOSTS file.

Explanation: SYS:\\ETC\\HOSTS file contains invalid data.

Action: Check if SYS:\\ETC\\HOSTS file contains the host information of agent. Also, use administration utility to confirm that agent is registered.

———— **KDDS11203-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Invalid SYS:\\ETC\\SERVICES file.

Explanation: SYS:\\ETC\\SERVICES file contains invalid data.

Action: Check if SYS:\\ETC\\SERVICES file contains the following data:

- - 'Protocol Type' is 'TCP'
- - 'Port Number' is same as agent
- - 'Service Name' is 'DFA.'

——— **KDDS11204-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: TCPIP.NLM has been unloaded.

Explanation: Gateway was stopped because TCPIP.NLM was unloaded from NetWare server.

Action: Load TCPIP.NLM to NetWare server, then re-start gateway.

——— **KDDS11205-E**

Severity: Fatal **Component:** dfa/dfa_s_gateway

Text: Gateway detected unknown error.

Explanation: Unknown error was detected in the gateway internal processing.

Action: Report to administrator. The administrator will take gateway logging and trace.

——— **KDDS11206-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Agent is not registered with gateway.

Explanation: Agent is not registered with gateway.

Action: Use administration utility to register agent.

——— **KDDS11207-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to modify master key.

Explanation: Error occurred when master key was being modified.

Action: Retry login from a NetWare client to DCE. If this fails, try the following:

- - Use administration utility to re-register agent
- - Go to a DFS client, and use 'setdfakey command' to re-register master key.

——— **KDDS11208-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Gateway is not registered with agent.

Explanation: Gateway information is not registered with agent, or the file containing the gateway registration information was destroyed.

Action: Use 'setdfakey command' on a DFS client to re-register master key.

———— **KDDS11209-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Invalid user account. DCE user name: xxx.

Explanation: 'Invalid' is set to a DCE user account on DCE, or the DCE user account has expired. xxx is the DCE user name (if the length of the name exceeds 6 bytes, first 16 bytes followed by ... are displayed)

Action: Check the contents of the DCE account information on DCE.

———— **KDDS11210-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Gateway and agent have different master keys.

Explanation: Master key was not successfully modified while the DCE login was being processed, or master key file was destroyed, or gateway and agent have a different master key.

Action: To set the same master key to gateway and agent, use administration utility for NetWare server, or 'setdfakey command' for DFS client.

———— **KDDS11211-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: DCE security server is unavailable.

Explanation: Unable to authenticate users because DCE security server is unavailable.

Action: Check the status of DCE security server.

———— **KDDS11214-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Gateway ran out of memory.

Explanation: No memory in NetWare system is available for gateway.

Action: Refer to NetWare's troubleshooting manual.

——— **KDDS11215-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to access Bindery: error code xxx.

Explanation: Error (described by xxx) occurred when gateway accessed NetWare Bindery.

Action: Use NetWare's BINDFIX command to rebuild Bindery.

——— **KDDS11216-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Error in communication with agent.

Explanation: Error occurred in the communication line to agent, or there was no response from agent.

Action: Check the communication line to agent, and agent itself.

——— **KDDS11217-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Agent is not up and running.

Explanation: Gateway cannot access DFS because agent is not running.

Action: Check the status of agent on DFS client.

——— **KDDS11218-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Trustee rights cannot be assigned to gateway volume xxx.

Explanation: Trustee rights cannot be assigned to the gateway volume because the gateway volume (described by xxx) is not mounted as a NetWare volume.

Action: Mount the gateway volume as a NetWare volume.

———— KDDS11219-E

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Trustee rights cannot be removed from gateway volume xxx.

Explanation: Trustee rights cannot be removed from the gateway volume (described by xxx) because the gateway volume is not mounted as a NetWare volume.

Action: Mount the gateway volume as a NetWare volume.

———— KDDS11220-I

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Trustee rights cannot be removed from gateway volume xxx because the gateway volume is not mounted as a NetWare volume. User name: yyy.

Explanation: Trustee rights cannot be removed from the gateway volume because the gateway volume is not mounted as a NetWare volume.

- xxx: Gateway volume Name
- yyy: user name

Action: Mount the gateway volume as a NetWare volume, then remove the trustee right of the user indicated.

———— KDDS11221-I

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: All users will be logged out.

Explanation: ?

Action: ?

———— KDDS11222-I

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: All users have been logged out.

Explanation: ?

Action: ?

——— **KDDS11223-I**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Agent failed to access master key.

Explanation: When gateway sent a DCE login request to agent, agent failed to access master key file.

Action: See the information shown in agent syslog file.

——— **KDDS11224-I**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: DFA.NLM was unloaded; Logged out from DCE.

Explanation: Because DFA.NLM was unloaded, gateway logged out the gateway users logging in to DCE.

Action: If a user was accessing a file when the logout was taken, check the contents of the file when the user logs in again.

——— **KDDS11225-I**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Communication error; Logged out from DCE.

Explanation: Due to a communication error, gateway logged out the gateway users logging in to DCE.

Action: Report to File-Access administrator. File-Access administrator is requested to check the message before this message.

——— **KDDS11226-I**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Gateway user xxx has been logged out from DCE.

Explanation: Because NetWare logout or NetWare client power-off occurred while a user logs in to DCE, gateway logged out the gateway users logging in to DCE.

Action: None.

———— **KDDS11401-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to copy back the file to DFS.

Explanation: The file built on the NetWare gateway volume was unsuccessfully copied back to DCE/DFS.

Action: None.

———— **KDDS11413-E**

Severity: Fatal **Component:** dfa/dfa_s_gateway

Text: Communication error: Logged out from DCE.

Explanation: Due to a communications error, gateway was logged out from DCE.

Action: Enter DCE again. If the same error recurs, report to DCE administrator.

———— **KDDS11414-E**

Severity: Fatal **Component:** dfa/dfa_s_gateway

Text: Gateway user xxx will be logged out from DCE due to communication error: error code yyy.

Explanation: Due to a communication error, gateway logged out from DCE.

- xxx: username of Gateway user logging in to DCE
- yyy: error code

The same message is displayed on NetWare client console.

Action: See the error code to take an action:

- If error code=1202:

The error is in the agent or the communications environment.

- If error code=1205:

Check if agent and gateway are connected with a LAN cable. To check this via software, use ping of NetWare. If the communication environment is not faulty, report to maintenance.

- If error code=other values

Fatal communication error. Report to maintenance.

——— **KDDS11601-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Volume xxx is invalid or not mounted.

Explanation: The NetWare volume registered as gateway volume (whose pathname is described by xxx) does not exist, or was not mounted before gateway (or directory synchronization) was initialized.

Action: Use administration utility to select an appropriate volume name. Or, use NetWare Install utility to mount volume.

——— **KDDS11603-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to read volume information of xxx.

Explanation: Failed to get NetWare volume (whose pathname is described by xxx) information.

Action: There may be a NetWare or file system error. Report to maintenance service.

——— **KDDS11604-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: File-access administrator is not registered.

Explanation: Gateway volume could not be initialized when File-Access was started because NetWare SUPERVISOR was not registered as File-Access administrator.

Action: Use NetWare Install utility to register File-Access administrator.

——— **KDDS11605-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: File-Access administrator failed to log in.

Explanation: When the File-Access starting process began gateway volume initialization, NetWare SUPERVISOR failed to enter DCE.

Action: Gateway cannot start. Report to maintenance service.

———— **KDDS11607-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to connect with agent.

Explanation: Administration connection could not be established when File-Access was started.

Action: Gateway cannot start. Report to maintenance service.

———— **KDDS11613-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Insufficient memory.

Explanation: NetWare has run out of memory.

Action: See NetWare troubleshooting manuals.

———— **KDDS11624-E**

Severity: Fatal **Component:** dfa/dfa_s_gateway

Text: Directory Sync. detected self-contradiction: error code xxx.

Explanation: Gateway detected a self-contradicting error (described by xxx).

Action: Report to maintenance.

———— **KDDS11625-Q**

Severity: Warning **Component:** dfa/dfa_s_gateway

Text: Delete files/directories remaining in volume xxx ? (Y/N)

Explanation: Gateway volume (whose pathname is described by xxx) has files or directories.

Action: Y: Delete them (Use the volume as a gateway volume) N: Keep them (Do not use it as a gateway volume)

Text: Directory Sync. terminated: return code %d.

Explanation: ?

Action: ?

———— **KDDS11651-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: NetWare server has invalid network environment.

Explanation: The setting of TCP/IP on NetWare server is invalid.

Action: Refer to NetWare manuals to correct the TCP/IP setting. Possible causes include: improper setting of LAN driver, bad IP connection by BIND command, and bad port number defined in SYS:\\ETC\\SERVICES.

———— **KDDS11652-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: No response from agent.

Explanation: One of the following occurred:

- - Agent is not running.
- - The machine where agent runs is not running.
- - Cannot access the machine where agent is running.

Action: Check the cause of the failure, and choose one of the following actions:

- Start agent. If agent has a problem starting, remove the problem.

- Start the machine on which agent runs.
- Set the network environment so that the agent-running machine is accessible.

———— KDDS11653-E

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Disconnection occurred in the communication with agent.

Explanation: Agent was terminated, or the agent process was killed by a problem, or there is a network problem.

Action: Remove the problem, and restart agent.

———— KDDS11654-E

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Timeout occurred in communication with agent.

Explanation: Timeout was detected in communication between agent and DCE security server, or agent and DFS server.

Action: Check the communication environment.

———— KDDS11661-E

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Administrator has invalid DCE account or password.

Explanation: File-Access administrator's DCE account is not valid, or expired. Or the DCE password is not correct.

Action: Make the DCE user account effective, or change the password.

———— KDDS11662-E

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Agent is not in root-mode.

Explanation: The dfaagt command (used for starting the agent) is not running as root, or its DCE password is not correct.

Action: Check if the invoker of dfaagt is root, and whether the value of the setuid bit is correct.

———— KDDS11663-E

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Agent has reported error: error code xxx.

Explanation: An error occurred to agent.

Action: See the error codes (described by xxx) listed below, and remove the problem:

- 12: Shortage of memory.
- 23: OS opened too many file descriptors.
- 24: Agent opened too many file descriptors.
- 233: Shortage of memory.
- 238: Connection error between DFS server and client:

DFS server is not started.

An error in the mount point cell name registered with gateway.

- 249: Too many symbolic links of the directory in the path.
- 1002: Cannot use authentication server.
- others: Report to maintenance.

———— KDDS11664-E

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Mount point xxx does not exist.

Explanation: The selected mount point (described by xxx) does not exist, or the registered mount point is invalid.

Action: Check the mount point, and see if the DFS client daemon is running on an agent machine.

———— KDDS11665-E

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to access Mount point xxx.

Explanation: The possible causes are:

- The DFS server is not started.
- The DFS server was just started but not ready for accessing.
- The Mount point cell name is not registered properly.
- Failed to access the Mount point.

Action: Take one of the following actions:

- Start the DFS server.
- Wait until the DFS server is ready to serve.
- Use the administration utility to set a proper mount point cellname.
- Remove the problem with referring to KDDS11663.

————- **KDDS11666-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Mount point xxx does not have access rights.

Explanation: The mount point (described by xxx) does not have access rights.

Action: Grant the mount point the access rights to be accessible from File-Access administrator, and restart gateway.

————- **KDDS11667-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Different encryption scheme is used.

Explanation: The encryption scheme employed in agent does not match that of gateway.

Action: Report to File-Access administrator.

————- **KDDS11668-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Different protocol is used.

Explanation: The data transmission method employed in agent does not match that of gateway.

Action: Report to File-Access administrator.

———— KDDS11671-E

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Gateway volume xxx ran out of disk space.

Explanation: Shortage of disk space on gateway xxx.

Action: Refer to NetWare administration manuals to expand the disk space.

———— KDDS11672-E

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Gateway volume xxx ran out of disk blocks.

Explanation: Cannot make directory due to directory area shortage.

Action: Refer to NetWare administration manuals to expand the directory area.

———— KDDS11681-E

Severity: Fatal **Component:** dfa/dfa_s_gateway

Text: Gateway detected unknown error: error code xxx.

Explanation: Gateway detected an internal error (described by xxx).

Action: Report to maintenance.

———— KDDS11801-E

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Access error while file was being dumped.

Explanation: File dump was killed due to a file access error.

Action: File dump abnormally ended. Report to maintenance service.

———— KDDS11802-E

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Initialization error in watchdog connection.

Explanation: Connection error occurred while gateway was being started.

Action: Find and remove the cause of the connection error, then retry initialization.

——— **KDDS11803-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Error in watchdog connection.

Explanation: Connection error occurred after gateway initialization was completed.

Action: Check and remove the cause of the connection error, then initialize again.

——— **KDDS11804-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to load DFALIB.NLM.

Explanation: Cannot load DFALIB.NLM.

Action: Cannot start gateway. Report to maintenance service.

——— **KDDS11805-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to register DFALIB.

Explanation: Cannot register DFALIB.

Action: Cannot start gateway. Report to maintenance service.

——— **KDDS11807-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to continue DFALIB handling.

Explanation: Cannot continue DFALIB processing.

Action: Cannot start gateway. Report to maintenance service.

——— **KDDS11808-I**

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: Agent will be terminated in xxx sec.

Explanation: Administrator will shutdown agent shortly (i.e., in xxx seconds).

Action: Exit from DCE within xxx seconds.

——— **KDDS11809-I**

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: Agent will be killed.

Explanation: Administrator will kill agent immediately.

Action: Exit from DCE.

——— **KDDS11810-I**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to modify effective period of DCE login.

Explanation: Failed to modify effective period of DCE login.

Action: Messages KDDS11812-I to KDDS11817-I (below) describe the possible causes of failure. Ask DCE administrator to take proper action.

——— **KDDS11812-I**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Cause: Security server is not running.

Explanation: Failed to modify effective period of DCE login because DCE security server was not up and running.

Action: Ask DCE administrator to start DCE security server.

——— **KDDS11813-I**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Cause: Login period too small.

Explanation: Failed to modify effective period of DCE login because the parameter specified for login period was too small.

Action: Report to DCE administrator.

——— **KDDS11814-I**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Cause: Password changed while login.

Explanation: Failed to modify effective period of DCE login because the password was changed while DCE login is in progress.

Action: Exit DCE, then enter DCE.

——— **KDDS11816-I**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Cause: Account invalid or expired.

Explanation: Failed to modify effective period of DCE login due to an invalid account, or account expired.

Action: Report to DCE administrator.

——— **KDDS11817-I**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Cause: Login period expired before renewed.

Explanation: Failed to modify effective period of DCE login because effective period expired before the extension of effective period was completed.

Action: Report to DCE administrator.

——— **KDDS11818-I**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Unknown DCE error.

Explanation: The effective period for the DCE password has expired.

Action: Change the DCE password.

——— **KDDS11819-I**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Change DCE password.

Explanation: Effective period of the DCE password has expired.

Action: Change the DCE password.

——— **KDDS11820-I**

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: Gateway watchdog will be restarted.

Explanation: ?

Action: ?

——— **KDDS11824-I**

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: Gateway watchdog connection will be closed.

Explanation: ?

Action: ?

——— **KDDS11825-I**

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: Gateway watchdog will be terminated.

Explanation: ?

Action: ?

——— **KDDS11826-I**

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: Dump will be started.

Explanation: Gateway dump is starting.

Action: none

——— **KDDS11827-I**

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: Dump completed.

Explanation: Gateway dump has completed.

Action: none

——— **KDDS11828-I**

Severity: Notice **Component:** dfa/dfa_s_gateway

Text: Unknown message received.

Explanation: Gateway received an unsupported message.

Action: Upgrade the gateway. Or report to File-Access administrator and DCE administrator. Both administrators should get the RAS file of gateway and agent.

——— **KDDS12001-E**

Severity: Fatal **Component:** dfa/dfa_s_gateway

Text: Communication error: Logged out from DCE.

Explanation: Due to a communications error, the gateway logged out of DCE.

Action: Enter DCE again. Report to DCE administrator if the same error recurs.

———— **KDDS12002-E**

Severity: Fatal **Component:** dfa/dfa_s_gateway

Text: Gateway user xxx will be logged out from DCE due to communication error: error code yyy.

Explanation: Due to a communication error, gateway logged out from DCE.

- xxx: Gateway user name logging in to DCE
- yyy: error code

The same message is displayed on NetWare client console.

Action: See the error code to take an action:

- error code=1202

The error is in the agent or the communication environment.

- error code=1205

Check if the agent and gateway are connected with a LAN cable. To check this via software, use ping of NetWare. If the communication environment is not faulty, report to maintenance.

- error code=others

Fatal communication error. Report to maintenance.

———— **KDDS12201-E**

Severity: Error **Component:** dfa/dfa_s_gateway

Text: Failed to record communication logging: (hh:mm:ss wcode=x rcode=y ecode=zzz)

Explanation: While communication logging was in process, an error occurred:

- hh:mm:ss: time error occurred
- wcode: the timing of when error occurred:

1: during initialization

2: during output

3: during termination

- rcode: error type:

1: failed to delete a file

2: failed to write to a file

- ecode:

error type=1

The communication logging file is set to a write prohibition mode. Or, the same named directory as the communication logging file exists.

error type=2

The volume does not have enough space.

Action: For ecode type=1, remove the write prohibition mode, or remove the directory with the same name as the communication logging file. For ecode type=2, expand the SYS volume.

———— **KDDS22001-I**

Severity: Notice **Component:** dfa/dfa_s_client

Text: ()successfully logged in.

Explanation: ?

Action: ?

———— **KDDS22002-E**

Severity: Error **Component:** dfa/dfa_s_client

Text: Cannot login to DCE

Explanation: Cannot enter DCE due to an error in File-Access.

Action: Ask File-Access administrator to check if the environment of agent and gateway is normal. If the cause of the error cannot be found, report to maintenance service.

————- **KDDS22003-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: User xxx is not a legitimate File-Access user.

Explanation: The logged-in user xxx is not registered with File-Access as a gateway user.

Action: Use the gateway administration utility to register the user as a gateway user. Or, enter with a registered user name.

————- **KDDS22004-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: Designated aaa(bbb) does not exist in DCE.

Explanation: DCE login failed because a DCE user corresponding with the NetWare user is not registered with DCE.

- aaa: NetWare user name
- bbb: DCE user name

Action: Use the gateway administration utility to assign a registered DCE user to the NetWare user xxx.

————- **KDDS22005-E**

Severity: Error **Component:** dfa/dfa_s_client

Text: Invalid DCE password

Explanation: The DCE user corresponding with a NetWare user has an invalid password.

Action: Use DSETPASS to correct the password.

———— **KDDS22006-W**

Severity: Warning **Component:** dfa/dfa_s_client

Text: Already logged in to DCE

Explanation: Login was attempted, but DLOGIN command already had the DCE user logged in to DCE.

Action: DCE login has been completed. Go to DCE file access.

———— **KDDS22007-W**

Severity: Warning **Component:** dfa/dfa_s_client

Text: The number of gateway login users exceeds the limit.

Explanation: Login to DCE failed because the number of logged-in users to the gateway has reached the limit.

Action: Try later. Contact File-Access administrator if immediate login is required.

———— **KDDS22102-E**

Severity: Error **Component:** dfa/dfa_s_client

Text: DCE Logout failed.

Explanation: Cannot exit DCE due to an error in File-Access.

Action: Ask File-Access administrator to check if the environment of agent and gateway is normal. If the cause of the error cannot be found, report to maintenance service.

———— **KDDS22105-I**

Severity: Notice **Component:** dfa/dfa_s_client

Text: Server xxx is processing DCE logout.

Explanation: ?

Action: ?

———— **KDDS22201-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: Invalid old password

Explanation: The entered old password does not match the one registered with gateway.

Action: Enter a correct password.

————- **KDDS22202-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: Invalid re-entered password

Explanation: The new password and the re-entered new password do not match.

Action: Run DSETPASS command again.

————- **KDDS22204-I**

Severity: Notice **Component:** dfa/dfa_s_client

Text: Password change is in progress.

Explanation: ?

Action: ?

————- **KDDS22205-I**

Severity: Notice **Component:** dfa/dfa_s_client

Text: Re-enter new password for xxx:

Explanation: ?

Action: ?

——— **KDDS22208-I**

Severity: Notice **Component:** dfa/dfa_s_client

Text: Password for xxx was changed.

Explanation: ?

Action: ?

——— **KDDS22209-Q**

Severity: Notice **Component:** dfa/dfa_s_client

Text: The above gateway shares the same old password as xxx. Do you want to assign the same new password to gateway ? (Y/N)

Explanation: When the DSETPASS command changed the password of a NetWare server, DSETPASS command found that the other NetWare server (the server name is displayed prior to this message) has the same old password as the target NetWare server.

Action: Enter 'Y' if you want to assign the same new password to the gateway that used to share the same password.

——— **KDDS22210-E**

Severity: Error **Component:** dfa/dfa_s_client

Text: Cannot change or check password

Explanation: The DSETPASS command cannot change or check the password due to an error in File-Access.

Action: Ask File-Access administrator to check if the environment of agent and gateway is normal. If the cause of the error cannot be found, report to maintenance service.

——— **KDDS22301-I**

Severity: Notice **Component:** dfa/dfa_s_client

Text: Gateway is active on xxx file servers in network.

Explanation: ?

Action: ?

———— **KDDS22302-W**

Severity: Notice **Component:** dfa/dfa_s_client

Text: No gateway is active in network.

Explanation: ?

Action: ?

———— **KDDS22402-E**

Severity: Fatal **Component:** dfa/dfa_s_client

Text: Communication error

Explanation: Communication error occurred between NetWare client and gateway (NetWare server).

Action: Check the hardware (for example, LAN board and LAN cable) and the LAN-related software setup as well. If this does not reveal the cause of the error, report to NetWare administrator and File-Access administrator.

———— **KDDS22403-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: Gateway is not running on xxx.

Explanation: Gateway is not up and running on the selected NetWare server (described by xxx; if the server name is omitted, the currently-logged-in NetWare server is assumed).

Action: Select a NetWare server where gateway is up and running.

———— **KDDS22404-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: Not logged in to DCE

Explanation: DLOGOUT command failed to exit DCE because the selected NetWare server is not being logged in to DCE.

Action: Select the NetWare server that is entering DCE.

———— **KDDS22405-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: Not logged in to NetWare server

Explanation: Not logged in to the selected NetWare server (if the server name is omitted, the currently-logged-in default NetWare server is assumed).

Action: Enter a NetWare server, then enter a command.

———— **KDDS22406-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: Parameter error: Set one server at a time

Explanation: The parameter for DLOGIN command has two or more server names.

Action: Set only one server name at a time.

———— **KDDS22407-E**

Severity: Error **Component:** dfa/dfa_s_client

Text: Cannot communicate with NetWare server xxx

Explanation: The selected NetWare server (described by xxx; if the server name is omitted, the currently-logged-in default NetWare server is assumed) does not exist in the Internet that File-Access is employing.

Action: Select a NetWare server that is in Internet used by File-Access.

———— **KDDS22408-W**

Severity: Warning **Component:** dfa/dfa_s_client

Text: NetWare client ran out of memory.

Explanation: The entered command failed due to a memory shortage on the NetWare client.

Action: Terminate unnecessary resident programs, then try again.

————- **KDDS22409-E**

Severity: Error **Component:** dfa/dfa_s_client

Text: Gateway or agent ran out of memory.

Explanation: The entered command failed due to a shortage of memory on the NetWare server or the DFS client where agent is running.

Action: Terminate unnecessary application programs running on the machines where gateway and agent reside, then try again.

————- **KDDS22410-E**

Severity: Fatal **Component:** dfa/dfa_s_client

Text: Gateway failed to access file 'bindery'

Explanation: Cannot access the bindery of NetWare server due to an I/O error.

Action: Report to File-Access administrator.

————- **KDDS22411-E**

Severity: Fatal **Component:** dfa/dfa_s_client

Text: System error occurred in gateway

Explanation: A fatal error occurred in the gateway environment on the NetWare server.

Action: Ask File-Access administrator to check the gateway environment.

————- **KDDS22412-E**

Severity: Fatal **Component:** dfa/dfa_s_client

Text: Connection error occurred between gateway and agent.

Explanation: A connection error occurred between gateway on NetWare server and agent on DFS client.

Action: Ask File-Access administrator to check the communication line between gateway and agent.

————- **KDDS22414-W**

Severity: Warning **Component:** dfa/dfa_s_client

Text: Login/logout in progress: No jobs accepted.

Explanation: Gateway cannot accept any jobs because DCE login or DCE logout is in progress on gateway.

Action: Wait till login/logout is completed, then try again.

———— **KDDS22415-E**

Severity: Fatal **Component:** dfa/dfa_s_client

Text: Cannot access the DCE login status

Explanation: Cannot access the DCE login status due to a program error in File-Access.

Action: Ask File-Access administrator to check if the environment of agent or gateway is normal. If the cause of the error cannot be found, report to maintenance service.

———— **KDDS22416-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: Agent is not running.

Explanation: Agent is not up and running on the DCE/DFS client connected to the selected NetWare server (if the server name is omitted, the currently logged-in NetWare server is assumed).

Action: Ask File-Access administrator to check the communication line and agent host name.

———— **KDDS22417-E**

Severity: Fatal **Component:** dfa/dfa_s_client

Text: System error occurred in agent

Explanation: A fatal error occurred in the agent environment.

Action: Ask File-Access administrator to check the agent environment.

———— **KDDS22418-E**

Severity: Fatal **Component:** dfa/dfa_s_client

Text: System error occurred in DCE

Explanation: A fatal error occurred in DCE where agent is running.

Action: Ask DCE administrator to check if DCE and the agent environment are normal.

———— **KDDS23000-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: No such path or file

Explanation: The selected path or file does not exist on the NetWare server.

Action: Make sure that the path or file is correct, then try again.

———— **KDDS23001-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: No such path

Explanation: The selected path does not exist on the NetWare server.

Action: Make sure that the path is correct, then try again.

———— **KDDS23002-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: No such subdirectory

Explanation: The selected directory does not have any subdirectories, or there is no corresponding directory for the wildcard.

Action: Make sure that the directory has a subdirectory, or a wildcard corresponding to an actual directory.

———— **KDDS23003-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: No such user

Explanation: The selected user is not registered with the NetWare system.

Action: Make sure that the user name is correct, then try again.

———— KDDS23004-W

Severity: Error **Component:** dfa/dfa_s_client

Text: No such group

Explanation: The selected group is not registered with the NetWare system.

Action: Make sure that the group name is correct, then try again.

———— KDDS23006-W

Severity: Error **Component:** dfa/dfa_s_client

Text: Local drive was selected: Should be a Network drive.

Explanation: An MS-DOS local drive was selected instead of a Network drive.

Action: Select a Network drive.

———— KDDS23007-W

Severity: Error **Component:** dfa/dfa_s_client

Text: Invalid option

Explanation: The parameter of a FILER command was invalid.

Action: Refer to the grammar displayed, and correct the parameter.

———— KDDS23008-W

Severity: Error **Component:** dfa/dfa_s_client

Text: Invalid rights list

Explanation: The rights list in DGRANT or DREVOKE contains an invalid code.

Action: Select from R, W, C, E, M, F, A, and Q for the parameter.

———— KDDS23009-W

Severity: Error **Component:** dfa/dfa_s_client

Text: No access right to set rights

Explanation: Necessary access right (A) is not granted: the operation to set rights was canceled.

Action: Set the necessary access right, then try again.

————- **KDDS23012-W**

Severity: Notice **Component:** dfa/dfa_s_client

Text: Converted path name is too long.

Explanation: ?

Action: ?

————- **KDDS23014-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: Not a gateway user.

Explanation: The login user is not a gateway user. Or, the designated name is not registered with File-Access as a user.

Action: Enter with a registered user ID, or use the File-Access administration utility to register the login user. Or, change the name to the user name already registered with File-Access.

————- **KDDS23015-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: Not logged in to DCE

Explanation: Not logged-in to DCE: FILER command failed.

Action: Use DLOGIN command or user utility to enter DCE, then try again.

————- **KDDS23016-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: A UFS path was entered: The selected operation is good for LFS only

Explanation: An operation allowed only to LFS was attempted on UFS.

Action: The selected operation is ignored. If the operation is required, change DFS from UFS to LFS.

————- **KDDS23017-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: Client out of memory.

Explanation: Client does not have enough memory.

Action: Remove unnecessary resident programs from memory.

———— **KDDS23018-I**

Severity: Notice **Component:** dfa/dfa_s_client

Text: There are unremovable users or groups.

Explanation: Removal attempted, but there are File-Access gateway users or groups (i.e., user_obj, group_obj, other_obj, mask_obj), who are unremovable.

Action: Not required. The above users or groups cannot be deleted.

———— **KDDS23020-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: Not a gateway volume

Explanation: The NetWare volume connected to the designated drive is not a File-Access gateway volume.

Action: Select a File-Access gateway volume.

———— **KDDS23022-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: Not a gateway group

Explanation: The selected name is not registered with File-Access as a group.

Action: Select a group already registered with File-Access.

———— **KDDS23024-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: The selected name is not registered with DCE User Group.

Explanation: A DCE user or group corresponding to the selected name is not registered with DCE.

Action: Ask File-Access administrator to use the admin utility to set proper mapping between the selected name and a DCE user group.

——— **KDDS23026-W**

Severity: Error **Component:** dfa/dfa_s_client

Text: The selected name is not trustee.

Explanation: The selected user or group is not a trustee of a directory or file.

Action: Select a trustee of a directory or file.

——— **KDDS23100-E**

Severity: Fatal **Component:** dfa/dfa_s_client

Text: Internal error (nnn)

Explanation: An unexpected error (described by nnn) occurred on client or gateway.

Action: Report to File-Access administrator.

——— **KDDS23110-E**

Severity: Fatal **Component:** dfa/dfa_s_client

Text: Connection error

Explanation: Connection error occurred in NetWare communication.

Action: Ask File-Access administrator to check the status of NetWare.

——— **KDDS23120-E**

Severity: Fatal **Component:** dfa/dfa_s_client

Text: System error

Explanation: A File-Access command for MS-DOS abnormally terminated.

Action: Report to File-Access administrator and maintenance service as well.

——— **KDDS23140-E**

Severity: Fatal **Component:** dfa/dfa_s_client

Text: An unexpected error occurred to gateway or agent (nnn)

Explanation: An unexpected fatal error (described by nnn) occurred on gateway, or agent.

Action: Report to File-Access administrator.

Text: %s bytes (%4ld files)
Explanation: ?
Action: ?

0x173ca00f msg_s_bad_id

Severity: Varies **Component:** svc

Text: Invalid message ID

Explanation: A message ID with an invalid technology or component was specified.

Action: Correct the programming error.

0x173ca015 msg_s_no_catalog

Severity: Varies **Component:** svc

Text: Message catalog does not exist

Explanation: The message catalog for the specified message ID does not exist.

Action: No action may be required; the program will use the default message text.

0x173ca013 msg_s_no_cat_open

Severity: Varies **Component:** svc

Text: Cannot open message catalog

Explanation: Could not open the message catalog for the specified message ID.

Action: Verify that the message code is correct and that the proper message catalogs are available.

0x173ca014 msg_s_no_cat_perm

Severity: Varies **Component:** svc

Text: No permission to open message catalog

Explanation: Local file permissions prevented the program from opening the message catalog for the specified message ID.

Action: No action may be required; program will use the default message text.

0x173ca011 msg_s_no_default

Severity: Varies **Component:** svc

Text: No default message found

Explanation: Could not find the default message for the specified status code in the internal tables.

Action: Verify that the status code being used is valid, and try to retrieve text from the message catalog.

0x173ca010 msg_s_no_memory

Severity: Varies **Component:** svc

Text: Out of memory

Explanation: Could not allocate memory for message table, string copy, or other internal requirement.

Action: Increase the swap or paging space or acquire more physical memory. Also check the program for bugs that resulted in bad pointers corrupting the heap allocation area.

0x173ca012 msg_s_not_found

Severity: Varies **Component:** svc

Text: Text for message code not found

Explanation: Could not find the text for the specified status code in either the in-core message tables or the message catalogs.

Action: Verify that the status code is correct and that the proper message catalogs are available.

0x00000000 msg_s_ok

Severity: Varies **Component:** svc

Text: Successful completion

Explanation: Operation performed.

Action: None required.

0x173ca016 msg_s_ok_text

Severity: Varies **Component:** svc

Text: Successful completion

Explanation: The operation was performed successfully.

Action: None required.

0x1328302d NIDL_ACFINIDL

Severity: Varies **Component:** idl

Text: ACF attributes in the IDL file, require the -app_config command line option

Explanation: Placing ACF attributes in the IDL file are extensions to the language, and require the -app_config command line option.

Action: Add -app_config to the command line

0x1328302e NIDL_ANONPIPE

Severity: Varies **Component:** idl

Text: Pipes must be defined with a typedef

Explanation: The IDL compiler constructs routine names that are referenced by generated stub code from the name of any <kw>(pipe) data type. Therefore the type cannot be anonymous.

Action: Declare the <kw>(pipe) data type with a <kw>(typedef) so the <kw>(pipe) has a name associated with it.

0x1328302f NIDL_ANONTYPE

Severity: Varies **Component:** idl

Text: Declaration of %1\$s cannot contain an anonymous type

Explanation: The type specification for the parameter, field or <kw>(union) arm <v>(name) contains a data type that is an anonymous <kw>(struct) or <kw>(union). Since such a type is unique and not compatible with any other type, the generated stubs cannot generate code to access the type.

Action: Move the <kw>(struct) or <kw>(union) declaration into a <kw>(typedef) and modify the declaration of <v>(name) to use the newly created type name.

0x13283030 NIDL_ARMREFPTR

Severity: Varies **Component:** idl

Text: An arm of a union cannot be or contain a [ref] pointer

Explanation: IDL-generated server stub code must allocate storage for objects pointed to by <kw>([ref]) pointers. IDL does not allow a <kw>([ref]) pointer within a <kw>(union) because the valid arm of the <kw>(union), and therefore the object for which storage is allocated, is not known at compile time.

Action: Change the pointer within the <kw>(union) declaration to a full pointer.

0x1328312f NIDL_ARMUNIQUEPTR

Severity: Varies **Component:** idl

Text: An arm of a union cannot be or contain a [unique] pointer

Explanation: IDL-generated server stub code must allocate storage for objects pointed to by <kw>([unique]) pointers. IDL does not allow a <kw>([unique]) pointer within a <kw>(union) because the valid arm of the <kw>(union), and therefore the object for which storage is allocated, is not known at compile time.

Action: Change the pointer within the <kw>(union) declaration to a full pointer.

0x13283151 NIDL_ARRATTRSHR

Severity: Varies **Component:** idl

Text: Array attribute variable cannot be used for both [cs_char] and non-[cs_char] arrays

Explanation: In a structure or parameter list, any variable which specifies the <kw>([size_is]) or <kw>([length_is]) for a <kw>([cs_char]) array must not be referenced in any attribute of a non-<kw>([cs_char]) array.

Action: Use separate structure fields or operation parameters to specify array attributes for the non-<kw>([cs_char]) array.

0x13283035 NIDL_ARRCFMTDIM

Severity: Varies **Component:** idl

Text: Arrays can be conformant in the first dimension only

Explanation: IDL only allows an array to be conformant in its first dimension.

Action: Modify the array declaration so dimensions other than the first have fixed bounds.

0x13283031 NIDL_ARRELEMCFMT

Severity: Varies **Component:** idl

Text: Array elements cannot be conformant arrays or conformant structures

Explanation: Array elements must be of fixed size.

Action: If the element type is an array, make sure that the array has fixed bounds. If the element type is a structure, make sure that any arrays in the structure have fixed bounds.

0x13283032 NIDL_ARRELEMCTX

Severity: Varies **Component:** idl

Text: Array elements cannot be context handles

Explanation: Arrays of context handles are not allowed.

Action: Change the definition of the array so its elements are not context handles. If you want to declare an array of context handles, you must use alternative means.

0x13283033 NIDL_ARRELEMPIPE

Severity: Varies **Component:** idl

Text: Array elements cannot be pipes

Explanation: Array elements cannot be pipes.

Action: Change the definition of the array so its elements are not of a <kw>(pipe) data type. If you want to declare an array of pipes, you must use alternative means.

0x13283138 NIDL_ARRFUNRES

Severity: Varies **Component:** idl

Text: Array function results are not allowed

Explanation: Because array function results are not supported in the C languages, they are not allowed in IDL.

Action: Return the required array as an <v>([out]) parameter.

0x1328315a NIDL_ARRMULTID

Severity: Varies **Component:** idl

Text: Arrays of [%1\$s] type cannot be multidimensional

Explanation: The indicated attribute cannot be applied to a type if there is an array which has this type as base type and the array has more than one dimension.

Action: Specify a different base type for the array which has more than one dimension.

0x13283036 NIDL_ARRPTRPRM

Severity: Varies **Component:** idl

Text: An array with a pointer attribute is valid only as a parameter

Explanation: An array that is a parameter in an operation can have a pointer attribute because arrays are implicitly passed by reference pointer. Otherwise, an array cannot have a pointer attribute.

Action: Remove the pointer attribute from the parameter or type definition, or define a new type without a pointer attribute.

0x13283154 NIDL_ARRPTRUNIQ

Severity: Varies **Component:** idl

Text: An array with [%1\$s] base type cannot have the [ptr] or [unique] attributes

Explanation: If an array parameter has a base type with the indicated attribute, it cannot have <kw>([ptr]) or <kw>([unique]) as parameter attributes.

Action: Remove the <kw>([ptr]) or <kw>([unique]) attribute. This implies that the parameter cannot have the value NULL, i.e. it must always point to valid array storage.

0x13283034 NIDL_ARRSIZEINFO

Severity: Varies **Component:** idl

Text: Array size information required for %1\$s

Explanation: The IDL code uses an array with bounds that are not fixed and does not specify the appropriate size attributes.

Action: Modify the array declaration to include the appropriate <kw>([max_is]) or <kw>([size_is]) attribute. If the array is a parameter, use an additional parameter to specify size information. If the array is a field in a structure, use an additional field to specify size information. The IDL code uses an array with bounds that are not fixed

and does not specify the appropriate size attributes. Modify the array declaration to include the appropriate `<kw>([min_is])`, `<kw>([max_is])`, or `<kw>([size_is])` attribute. If the array is a parameter, use an additional parameter to specify the missing size information. If the array is a field in a structure, use an additional field to specify the missing size information.

0x13283037 NIDL_ARRSYNTAX

Severity: Varies **Component:** idl

Text: Use array syntax to declare multidimensional arrays

Explanation: An IDL declaration attempts to use mixed pointer (`<kw>(*)`) and array (`<kw>([])`) syntax to define a multidimensional array. The interpretation that an asterisk (`<kw>(*)`) is used to represent an array is due to the presence of one or more of the `<kw>([max_is])`, or `<kw>([size_is])` attributes. It is ambiguous whether size attributes apply to the pointer or the array, thus IDL does not allow mixing pointer and array syntax when size attributes are present.

Action: The IDL compiler requires that you make such declarations using only array `<kw>([])` syntax. If you do not want to declare a multidimensional array, you used the `<kw>([max_is])`, or `<kw>([size_is])` attribute incorrectly. They apply only to arrays with bounds that are not fixed, and the declared array has fixed bounds.

0x1328315b NIDL_ARRTYPATTR

Severity: Varies **Component:** idl

Text: Arrays of [%1\$s] type can only use the [size_is] and [length_is] array attributes

Explanation: The indicated attribute cannot be applied to a type if there is an array which has this type as base type and any of the attributes `<kw>([min_is])`, `<kw>([max_is])`, `<kw>([first_is])`, `<kw>([last_is])`, or `<kw>([string])` has been applied to the array.

Action: Use only the `<kw>([size_is])` and/or `<kw>([length_is])` attributes in relevant array declarations, or specify a different base type for the array that has the indicated attribute.

0x13283038 NIDL_ARRVARYDIM

Severity: Varies **Component:** idl

Text: Arrays can be varying in the first dimension only

Explanation: IDL only allows an array to be varying in its first dimension.

Action: Remove the <kw>([first_is]), <kw>([last_is]), or <kw>([length_is]) attributes that refer to dimensions other than the first.

0x13283039 NIDL_ARRXMITOPEN

Severity: Varies **Component:** idl

Text: Arrays with [transmit_as] cannot be conformant or varying

Explanation: IDL does not allow a conformant or varying array with the <kw>([transmit_as]) attribute.

Action: Change the declaration so the array is of fixed size and has no data limit attributes, or remove the <kw>([transmit_as]) attribute.

0x13283152 NIDL_ATTROUTCFMTCS

Severity: Varies **Component:** idl

Text: An [in,size_is] parameter for an [out,cs_char] array cannot be used for other array attributes

Explanation: None

Action: None

0x13283139 NIDL_ATTRPTRVOID

Severity: Varies **Component:** idl

Text: Attribute [%1\$s] cannot be applied to a void * type

Explanation: The indicated attribute is not valid on a <kw>(void *) type. The only attribute that is meaningful on a <kw>(void *) type is <v>([context_handle]).

Action: Edit the IDL source code to remove the conflict.

0x1328303a NIDL_ATTRTRANS

Severity: Varies **Component:** idl

Text: The attribute is no longer allowed in this context; use translator

Explanation: An attribute list is encountered in an invalid context. In NCS Version 1 NIDL, attributes are allowed in this position. You may be compiling an NCS Version 1 NIDL source file.

Action: If the input is an NCS Version 1 NIDL source file, process it with the <kw>(nidl_to_idl) translator utility that converts an NCS Version 1 NIDL source file into the format expected by the IDL compiler. Then compile the translated source file. Otherwise, move the attributes to a valid location.

0x1328313c NIDL_ATTRUSEMULT

Severity: Varies **Component:** idl

Text: Attribute cannot be used more than once

Explanation: An attribute is repeated multiple times in an attribute list.

Action: Remove all but one occurrence of the offending attribute.

0x1328303b NIDL_ATTRVALIND

Severity: Varies **Component:** idl

Text: An attribute variable cannot be an indirect field reference

Explanation: An indirect field reference is used in a field attribute; indirection is not allowed in this context.

Action: Remove the indirection. For example, if the referenced field was <kw>(long *sp;) and the attribute expression was <kw>([size_is(*sp)]), then change the field to <kw>(long s;) and the attribute expression to <kw>([size_is(s)]).

0x1328303c NIDL_BADTAGREF

Severity: Varies **Component:** idl

Text: Invalid use of tag %1\$s

Explanation: You used a previously defined tag name in a declaration of a different type. Tag names can be used for a <kw>(struct) or <kw>(union) declaration, but not both.

Action: Either make sure that each use of the tag name specifies the same type, or use different tag names with each type.

0x132830a1 NIDL_BFINTTYPE

Severity: Varies **Component:** idl

Text: A bit field specification can be applied only to simple, integral types

Explanation: A bit field specification indicates the bit width of a simple integral type. This cannot be applied to other types such as pointers and structs for obvious reasons.

Action: Remove bit field specifications that appear on non-integral simple types.

0x1328303d NIDL_BROADCASTPIPE

Severity: Varies **Component:** idl

Text: The attribute [broadcast] is not valid on an operation with pipes

Explanation: IDL does not allow pipes to be used in <kw>([broadcast]) operations.

Action: Remove the <kw>([broadcast]) attribute from the operation, or remove the <kw>(pipe) parameter from the operation.

0x1328310d NIDL_BUGNOBUG

Severity: Varies **Component:** idl

Text: Command option -bug %1\$lu conflicts with -no_bug %2\$lu

Explanation: The command line options conflict with each other.

Action: Remove one of the conflicting options.

0x1328303f NIDL_CASECONENUM

Severity: Varies **Component:** idl

Text: Case label must be a constant from the enumeration of the discriminant

Explanation: The value of a <kw>(case) expression in a discriminated <kw>(union) is from a different enumeration data type than the enumeration data type of the discriminator variable in the <kw>(switch) clause.

Action: Change the discriminator declaration or the <kw>(case) expression so the enumeration data types match.

0x1328303e NIDL_CASEDISCTYPE

Severity: Varies **Component:** idl

Text: Case label type does not agree with discriminator type

Explanation: The value of a <kw>(case) expression in a discriminated <kw>(union) is not the same data type as the discriminator variable in the <kw>(switch) clause.

Action: Change the discriminator declaration or the <kw>(case) expression so the data types match.

0x13283040 NIDL_CFMTARRREF

Severity: Varies **Component:** idl

Text: Structures containing conformant arrays must be passed by reference

Explanation: The size of a structure that contains a conformant array is not a compile-time constant. It is not possible to pass such a structure by value.

Action: Change the parameter declaration to pass the structure by reference by adding an asterisk (<kw>(*)) to the left of the parameter name.

0x13283041 NIDL_CFMTBASETYP

Severity: Varies **Component:** idl

Text: The base type of a pipe cannot be a conformant type

Explanation: IDL does not allow pipes of any data type of size that is not fixed.

Action: Change your <kw>(pipe) type definition to use a fixed array or some other construct of fixed size.

0x13283042 NIDL_CFMTFLDLAST

Severity: Varies **Component:** idl

Text: A conformant field must be the last field in the structure

Explanation: The IDL compiler restricts arrays with bounds that are not fixed and that occur in structures to only the last field in the structure.

Action: If the structure contains more than one conformant array, remove all but one of them. Move the conformant array so it is the last field in the structure definition.

0x13283043 NIDL_CFMTUNION

Severity: Varies **Component:** idl

Text: Conformant array or structure is invalid within a union

Explanation: The IDL compiler does not allow an array with bounds that are not fixed in a discriminated <kw>(union). Each member of a <kw>(union) must be of fixed size.

Action: It is possible to have a <kw>(union) case that is a full <kw>([ptr]) pointer to a conformant array or conformant structure. Change the declaration and associated code accordingly.

0x13283002 NIDL_CMDERR

Severity: Varies **Component:** idl

Text: Use %1\$s for list of command options

Explanation: Errors on the command line prevent the IDL compiler from executing.

Action: Invoke the IDL compiler with the indicated command option to get a list of valid command options, then correct the error.

0x1328310f NIDL_COMMENTEOF

Severity: Varies **Component:** idl

Text: Unterminated comment, end-of-file encountered

Explanation: During the processing of a multiline comment, the end of the source file was reached before the termination characters for the comment.

Action: Make sure that all multiline comments are correctly terminated.

0x13283110 NIDL_COMPABORT

Severity: Varies **Component:** idl

Text: Compilation aborted

Explanation: Previous errors caused the compilation to abort.

Action: Correct the errors and recompile.

0x13283044 NIDL_CONFHANATTR

Severity: Varies **Component:** idl

Text: Interface attributes [auto_handle] and [implicit_handle] cannot occur together

Explanation: The <kw>([auto_handle]) and <kw>([implicit_handle]) attributes are two distinct mechanisms for managing the binding between client and server at runtime. You cannot specify both of these attributes.

Action: See the documentation to determine which binding mechanism to use. Then remove one of the conflicting attributes from the interface attribute list in the Attribute Configuration File (ACF).

0x13283046 NIDL_CONFLICTATTR

Severity: Varies **Component:** idl

Text: The attributes [%1\$s] and [%2\$s] cannot occur together

Explanation: The specified attributes are conflicting and only one or the other can be specified.

Action: Remove one of the attributes.

0x1328310e NIDL_CONFLICTOPT

Severity: Varies **Component:** idl

Text: Command option %1\$s conflicts with %2\$s

Explanation: The command line options conflict with each other.

Action: Remove one of the conflicting options.

0x13283045 NIDL_CONFLINEATTR

Severity: Varies **Component:** idl

Text: The attributes [in_line] and [out_of_line] cannot occur together

Explanation: None

Action: None

0x13283047 NIDL_CONFREPRTYPE

Severity: Varies **Component:** idl

Text: The [represent_as] type %1\$s conflicts with previously defined %2\$s

Explanation: The attribute configuration file (ACF) contains conflicting <kw>([represent_as]) clauses for the same data type.

Action: Remove one of the <kw>([represent_as]) clauses for that data type.

0x13283048 NIDL_CONSTNOTFND

Severity: Varies **Component:** idl

Text: Constant name: %1\$s not found

Explanation: The named <kw>(constant) is not defined.

Action: Modify the interface and specify a known constant.

0x13283166 NIDL_CONSTRUCTOR

Severity: Varies **Component:** idl

Text: A [cxx_new] operation must return an interface pointer

Explanation: A <kw>([cxx_new]) operation attribute is used to identify a remote object creator operation. A remote object creator operation must return a pointer to an interface.

Action: Insure that the return value for the operation is an <interface-name> * type.

0x13283049 NIDL_CONSTTYPE

Severity: Varies **Component:** idl

Text: Constant type does not agree with constant expression

Explanation: You used a constant expression that is inappropriate for the constant type.

Action: Modify the constant definition so the expression matches the type.

0x13283163 NIDL_CPPCMDOPT

Severity: Varies **Component:** idl

Text: Warning: Use of C preprocessor directive requires %1\$s

Explanation: The IDL compiler detected a C preprocessor directive in a source IDL or ACF file. C preprocessor directives begin in the first column of a source line and start with the '#' character. Either you have specified an IDL command option to disable C preprocessing, or IDL does not invoke the C preprocessor by default on the platform on which you are running.

Action: Add the indicated command option to your <kw>(idl) command so that the IDL compiler will invoke the C preprocessor to preprocess source IDL and ACF files before they are parsed.

0x13283153 NIDL_CSARRSYN

Severity: Varies **Component:** idl

Text: A [size_is] or [max_is] attribute cannot be applied to a pointer to a [cs_char] type

Explanation: The <kw>([cs_char]) ACF attribute cannot be applied to a type which is the target of a pointer with the <kw>([size_is]) or <kw>([max_is]) attribute.

Action: Use an array of <kw>([cs_char]) instead of pointer to array of <kw>([cs_char]), or use a pointer to a structure which contains a conformant array of <kw>([cs_char]).

0x13283050 NIDL_CTXBASETYP

Severity: Varies **Component:** idl

Text: The base type of a pipe cannot be a [context_handle] type

Explanation: A <kw>([context_handle]) type cannot be used as the base type of a <kw>(pipe).

Action: Remove the invalid declaration, or change it so the base type of the <kw>(pipe) is not a <kw>([context_handle]) type.

0x13283051 NIDL_CTXPTRVOID

Severity: Varies **Component:** idl

Text: Attribute [context_handle] only applies to void * types

Explanation: The attribute <kw>([context_handle]) indicates that the data is a pointer-sized object that serves as the handle, or method of accessing, some object. To the called operation, the data is often an address of a structure in memory, although it need not be. A context handle is opaque to, and must never be written by, the caller code. To emphasize this, IDL previously required that context handles be defined as type <kw>(void *). IDL has since been relaxed to also allow a context handle type to be defined as a pointer to a structure type by tag name, e.g. <v>(typedef [context_handle] struct opaque_struct * opaque_ch_t).

Action: Change the declaration with the <kw>([context_handle]) attribute to data type <kw>(void *) or to a <kw>(struct *) data type similar to the example above.

0x13283052 NIDL_CTXSTRFLD

Severity: Varies **Component:** idl

Text: Context handles are not valid as structure fields

Explanation: A context handle is not allowed as a field of a structure.

Action: Pass a context handle as a separate parameter to an operation, rather than embedding it as a field of a structure.

0x13283053 NIDL_CTXUNIMEM

Severity: Varies **Component:** idl

Text: Context handle is not valid as a member of a union

Explanation: A context handle cannot be a member of a <kw>(union).

Action: Pass a context handle as a separate parameter to an operation, rather than embedding it as a member of a <kw>(union).

0x13283145 NIDL_DECINONLY

Severity: Varies **Component:** idl

Text: Warning: Operation with [decode] has [in]-only parameter %1\$s

Explanation: The client stub for an operation with the <kw>([decode]) attribute decodes encoded data into operation parameters with the <kw>([out]) attribute. Parameters with only the <kw>([in]) attribute are ignored.

Action: If any client will encode the data by applying the <kw>([encode]) attribute to the operation, the operation must contain all <kw>([in,out]) parameters except for the binding handle parameter.

0x13283142 NIDL_DECNOPARAMS

Severity: Varies **Component:** idl

Text: Operation with [decode] must have at least one [out] or [in,out] parameter

Explanation: The client stub for an operation with the <kw>([decode]) ACF attribute decodes a data stream into the operation's <kw>([out]) and <kw>([in,out]) parameters. The <kw>([decode]) attribute is not meaningful on an operation with only <kw>([in]) parameters.

Action: Perhaps you meant to use the `<kw>([encode])` attribute on the operation. If not, either remove the `<kw>([decode])` attribute or add the `<kw>([out])` attribute to one or more parameters.

0x13283003 NIDL_DEFAUTOHAN

Severity: Varies **Component:** idl

Text: Operation %1\$s has no binding handle parameter; [auto_handle] assumed

Explanation: When an operation uses parametric binding, its first parameter is a handle parameter that determines the location of a server of the interface. Operations whose first parameter is not of type `<kw>(handle_t)` and does not have the `<kw>([handle])` attribute are assumed to use nonparametric binding known as `<kw>(auto_handle)`, whereby a binding is automatically established by the RPC runtime library.

Action: See the documentation on the various binding techniques to determine the best method for your application.

0x13283054 NIDL_DEFNOTCOMP

Severity: Varies **Component:** idl

Text: Definition of tag %1\$s is not yet complete

Explanation: The tag `<v>(name)` is forward referenced in a context that requires it to be completely defined. References to `<kw>(struct)` or `<kw>(union)` types by means of tag name before the `<kw>(struct)` or `<kw>(union)` is completely defined is only allowed in contexts in which the size is not needed (a pointer to the type or in a `<kw>(typedef)`). Although IDL can process such references, the resulting stub cannot be compiled by most C compilers.

Action: Move the declaration of the `<kw>(struct)` or `<kw>(union)` prior to this reference.

0x1328316e NIDL_DELEGATENOTVAL

Severity: Varies **Component:** idl

Text: ACF attribute [cxx_delegate] is only valid for -lang cxx

Explanation: The ACF `<kw>([cxx_delegate])` interface attribute only pertains to interfaces that are compiled with the `<kw>(-lang cxx)` IDL compiler option.

Action: If your application code is written in C++, then you must use the <kw>(-lang cxx) option to the IDL compiler in order to enable generation of C++ header file and stub files. Otherwise, edit the <v>(interface-name).acf file, and remove the <kw>([cxx_delegate]) attribute.

0x1328311c NIDL_DISCRIMIN

Severity: Varies **Component:** idl

Text: An [in] or [in,out] union must have an [in] discriminator

Explanation: A nonencapsulated union parameter that has the <kw>([in]) attribute must have a discriminator, specified in a <kw>([switch_is]) clause, that also has the <kw>([in]) attribute, since the client stub code must know which member of the union to send to the server.

Action: Modify the parameter referenced in the <kw>([switch_is]) clause to have the <kw>([in]) attribute.

0x1328311d NIDL_DISCRIMOUT

Severity: Varies **Component:** idl

Text: An [in,out] or [out] union must have an [out] discriminator

Explanation: A nonencapsulated union parameter that has the <kw>([out]) attribute must have a discriminator, specified in a <kw>([switch_is]) clause, that also has the <kw>([out]) attribute, since the server stub code must know which member of the union to send to the client.

Action: Modify the parameter referenced in the <kw>([switch_is]) clause to have the <kw>([out]) attribute.

0x1328311e NIDL_DISCRIMREPAS

Severity: Varies **Component:** idl

Text: A [switch_is] variable must not have a [represent_as] type

Explanation: The parameter or field referenced in a <kw>([switch_is]) clause must not be of a data type that has been declared to have a <kw>([represent_as]) type.

Action: Change the referenced parameter or field data type, or the data type definition itself.

0x1328311f NIDL_DISCRIMXMITAS

Severity: Varies **Component:** idl

Text: A [switch_is] variable must not have a [transmit_as] type

Explanation: The parameter or field referenced in a <kw>([switch_is]) clause must not be of a data type that has been declared to have a <kw>([transmit_as]) type.

Action: Change the referenced parameter or field data type, or the data type definition itself.

0x13283055 NIDL_DUPCASEVAL

Severity: Varies **Component:** idl

Text: Duplicate case label value

Explanation: A discriminated <kw>(union) contains more than one <kw>(case) label with the same value. Each <kw>(case) label value in a discriminated <kw>(union) can be used at most once.

Action: Remove one of the conflicting <kw>(case) labels.

0x1328314e NIDL_DUPPRMATTR

Severity: Varies **Component:** idl

Text: The [%1\$s] attribute cannot be duplicated in the same parameter list

Explanation: The named attribute cannot be applied twice in the same parameter list.

Action: Make sure that only one parameter in the operation's parameter list has the attribute applied to it. The attribute is specified either in the source IDL or source ACF file.

0x13283016 NIDL_DUPPROTOCOL

Severity: Varies **Component:** idl

Text: Warning: Duplicate Protocol specification in endpoint list; \"%1\$s\" ignored

Explanation: Each protocol can be listed at most once in the endpoint list. The specified endpoint specification duplicates another endpoint specification and is ignored.

Action: Use each protocol at most once in the endpoint list.

0x13283148 NIDL_ENCDECBIND

Severity: Varies **Component:** idl

Text: Operation with [encode] or [decode] must use explicit binding

Explanation: An operation with either of the <kw>([encode]) or <kw>([decode]) attributes may not use automatic, customized, or implicit binding.

Action: Edit the IDL operation definition to have an item of type <v>(handle_t) as its first argument, or edit the ACF operation declaration to include the <kw>([explicit_handle]) attribute.

0x13283146 NIDL_ENCDECDIR

Severity: Varies **Component:** idl

Text: Operation with [encode,decode] must have all [in,out] parameters

Explanation: The client stub for an operation with the <kw>([encode,decode]) attributes can encode the operation's parameters into a data stream and subsequently decode the data back into parameters. This only makes sense if the decoded data, i.e. the <kw>([out]) parameters, agrees with the originally encoded <kw>([in]) parameters.

Action: The operation must contain all <kw>([in,out]) parameters except for the binding handle parameter.

0x13283147 NIDL_ENCDECPPIPE

Severity: Varies **Component:** idl

Text: Operation with [encode] or [decode] may not contain pipe parameters

Explanation: The IDL encoding services do not support pipes.

Action: Use arrays to represent the data, or utilize multiple procedure calls to encode or decode the data.

0x13283141 NIDL_ENCNOPPARAMS

Severity: Varies **Component:** idl

Text: Operation with [encode] must have at least one [in] or [in,out] parameter

Explanation: The client stub for an operation with the <kw>([encode]) ACF attribute encodes the operation's <kw>([in]) and <kw>([in,out]) parameters into a data stream.

The `<kw>([encode])` attribute is not meaningful on an operation with only `<kw>([out])` parameters (excluding the binding handle parameter).

Action: Perhaps you meant to use the `<kw>([decode])` attribute on the operation. If not, either remove the `<kw>([encode])` attribute or add the `<kw>([in])` attribute to one or more parameters.

0x13283144 NIDL_ENCOUTONLY

Severity: Varies **Component:** idl

Text: Warning: Operation with [encode] has [out]-only parameter %1\$s

Explanation: The client stub for an operation with the `<kw>([encode])` attribute encodes all of the operation parameters with the `<kw>([in])` attribute. Parameters with only the `<kw>([out])` attribute are ignored.

Action: If any client will decode the encoded information by applying the `<kw>([decode])` attribute to the operation, the operation must contain all `<kw>([in,out])` parameters except for the binding handle parameter.

0x13283017 NIDL_ENDPOINTSYNTAX

Severity: Varies **Component:** idl

Text: Warning: Syntax error in endpoint specification \"%1\$s\"

Explanation: The syntax of the string describing the endpoint must be of the form `<v>(protocol:[endpoint])`. Although not in the expected format, the string `<v>(endpoint)` is assumed to be the desired endpoint specification and is put into the generated stubs.

Action: Correct the syntax of the `<kw>(endpoint)` specification.

0x13283056 NIDL_EOF

Severity: Varies **Component:** idl

Text: Unexpected end-of-file

Explanation: The end of the source file was encountered before the end of the interface definition. The source file may be incomplete.

Action: Complete the interface definition.

0x13283057 NIDL_EOFNEAR

Severity: Varies **Component:** idl

Text: Unexpected end-of-file near '%2\$.*1\$s'

Explanation: The end of the source file was encountered before the end of the interface definition. The source file may be incomplete.

Action: Complete the interface definition.

0x13283058 NIDL_ERRINATTR

Severity: Varies **Component:** idl

Text: Syntax error in attribute list

Explanation: The syntax of the attribute list is not correct. It must contain a list of attributes separated by commas.

Action: Make sure the attribute list contains only valid attribute names and values, that their spellings are correct, and that they form a valid list.

0x13283059 NIDL_ERRSTATDEF

Severity: Varies **Component:** idl

Text: Data type %1\$s must be defined in %2\$s

Explanation: You used a feature that requires a predefined data type that is normally present by default, but the data type was not found. An examples is a <kw>([comm_status]) or <kw>([fault_status]) parameter, which requires the data type <kw>(error_status_t).

Action: The compiler expected to find the type in the indicated file (usually <kw>(nbase.idl), which is automatically imported by IDL). Check that you are using the proper header files that were installed with DCE.

0x13283120 NIDL_EUMEMATTR

Severity: Varies **Component:** idl

Text: An encapsulated union member cannot have the [%1\$s] attribute

Explanation: The attribute used is valid only on nonencapsulated unions, but was used on an encapsulated union.

Action: Remove the attribute. Consult the documentation for the differences between encapsulated and nonencapsulated unions.

0x13283149 NIDL_EXCNOTDEF

Severity: Varies **Component:** idl

Text: Exception name %1\$s referenced in ACF is not defined

Explanation: An exception name is referenced in an Attribute Configuration File (ACF) but is not defined in the corresponding IDL file. Exceptions are not imported, so in order to reference an exception name in the ACF for a particular interface it must be defined in the IDL file for that same interface.

Action: Check for typographical errors in both the IDL and ACF files. If necessary, add the exception name to the source IDL file using the [exceptions] interface attribute, or move the ACF reference to the ACF file corresponding to the interface in which the exception name is defined.

0x13283018 NIDL_EXTRAPUNCT

Severity: Varies **Component:** idl

Text: Warning: Extraneous punctuation character \"%1\$s\" ignored

Explanation: A punctuation character was found in a location where it is not allowed in the IDL language syntax.

Action: If it is only an extra punctuation character, remove it. If the character appears correct, then the error may be caused by another nearby syntax error. Correct the other syntax errors and recompile the interface.

0x1328305a NIDL_FILENOTDIR

Severity: Varies **Component:** idl

Text: File is not a directory: %1\$s

Explanation: A file that is not a directory is specified in a context where a directory is required; for example, as the command line option that specifies an output directory.

Action: Specify a filename that is a directory.

0x1328305b NIDL_FILENOTFND

Severity: Varies **Component:** idl

Text: File %1\$s not found

Explanation: A file, specified by the user either in the IDL source or ACF file, does not exist.

Action: Check the filenames you specified. Determine the location of any imported or included files that are needed to compile the IDL source file specified. If any are not in the directories that the IDL compiler searches by default, you must use a command line option to specify additional directories to search.

0x13283004 NIDL_FILESOURCE

Severity: Varies **Component:** idl

Text: File %1\$s, line %2\$lu: %3\$s

Explanation: Identifies the filename, source line number, and source text associated with an error.

Action: None. This is an informational message.

0x1328314b NIDL_FILESPECREQ

Severity: Varies **Component:** idl

Text: File specification required for %1\$s

Explanation: The indicated IDL command option requires a file specification.

Action: Supply a file specification following the option.

0x1328305c NIDL_FIRSTINATTR

Severity: Varies **Component:** idl

Text: The [first_is] parameter must have the [in] attribute

Explanation: The <kw>([first_is]) attribute specifies a parameter that contains the lower data limit of a varying array. Since the array has the <kw>([in]) attribute, the lower data limit parameter must also be <kw>([in]) so the number of array elements to send from client to server is known.

Action: Change the lower data limit parameter referenced by the <kw>([first_is]) clause to have the <kw>([in]) attribute.

0x1328305d NIDL_FIRSTYPEINT

Severity: Varies **Component:** idl

Text: A [first_is] variable must be a small, short, or long integer

Explanation: The <kw>([first_is]) attribute specifies a field or parameter that contains the lower data limit of a varying array. Array data limits must be integers which are not <kw>(hyper).

Action: Change the data limit field or parameter referenced by the <kw>([first_is]) clause to integer data type.

0x1328312d NIDL_FLDXMITCFMT

Severity: Varies **Component:** idl

Text: A structure field cannot be of a presented type for which the transmitted type is conformant

Explanation: IDL does not allow a structure field whose type has a <kw>([transmit_as]) attribute where the transmissible type is conformant.

Action: Use a valid IDL construct.

0x1328305e NIDL_FLOATCONSTNOSUP

Severity: Varies **Component:** idl

Text: Floating point constants not supported

Explanation: Floating point constants cannot be specified in IDL.

Action: Remove the <kw>(float) constant specification.

0x13283005 NIDL_FLOATPROM

Severity: Varies **Component:** idl

Text: Must compile stubs with ANSI C compiler to avoid promotion of float to double in operation %1\$s

Explanation: The operation contains a <kw>(float) parameter passed by value. Non-ANSI C compilers that do not support function prototypes, automatically promote <kw>(float) to <kw>(double). Function prototypes within generated C stubs are conditional on the IDL_PROTOTYPES preprocessor symbol. When you compile a stub with a non-ANSI C compiler, IDL_PROTOTYPES must not be defined

(causing the non-prototyped definitions to compile) and thus causing <kw>(float) to <kw>(double) promotion. This breaks the marshalling logic in the stub, that expects a <kw>(float), not a <kw>(double).

Action: Problems do not occur as long as you compile stubs with an ANSI C compiler. However, to maximize portability, it is highly recommended that you modify any <kw>(float) parameter passed passed by value or a <kw>(float) passed by reference. This message is informational.

0x1328305f NIDL_FPCFMTARR

Severity: Varies **Component:** idl

Text: Function pointers are not valid as elements of conformant arrays

Explanation: None

Action: None

0x13283019 NIDL_FPHANATTR

Severity: Varies **Component:** idl

Text: Warning: The [handle] attribute of a parameter in a function pointer declaration is ignored

Explanation: None

Action: None

0x13283061 NIDL_FPHANPRM

Severity: Varies **Component:** idl

Text: Function pointer parameters cannot be of type handle_t

Explanation: None

Action: None

0x13283062 NIDL_FPINPRM

Severity: Varies **Component:** idl

Text: Function pointers in an operation must be [in] parameters

Explanation: None

Action: None

0x13283060 NIDL_FPLOCINT

Severity: Varies **Component:** idl

Text: Function pointers are allowed only in local interfaces

Explanation: None

Action: None

0x13283063 NIDL_FPPIPEBASE

Severity: Varies **Component:** idl

Text: The base type of a pipe cannot be a function pointer

Explanation: None

Action: None

0x13283064 NIDL_FPSTRFLD

Severity: Varies **Component:** idl

Text: Function pointers are not valid as structure fields

Explanation: None

Action: None

0x13283065 NIDL_FPUNIMEM

Severity: Varies **Component:** idl

Text: Function pointers are not valid as members of unions

Explanation: None

Action: None

0x13283066 NIDL_FUNTYPDCL

Severity: Varies **Component:** idl

Text: Function types are allowed only in local interfaces

Explanation: None

Action: None

0x1328313b NIDL_FWDTAGREF

Severity: Varies **Component:** idl

Text: Warning: Forward tag reference %1\$s in this declaration is not ANSI C compliant

Explanation: A tag reference, such as <kw>(struct tagname), was used before the actual definition of the tag. Such references are not ANSI C compliant when used in certain scopes, such as in a parameter declaration. Thus the C source modules generated by the IDL compiler might not compile successfully.

Action: Define the type that is referenced by tag name before referencing it in a parameter declaration.

0x13283067 NIDL_HANARRELEM

Severity: Varies **Component:** idl

Text: Array elements cannot be of type handle_t

Explanation: Data type <kw>(handle_t) is only meaningful when used as the data type of the first parameter in an operation. It is used to establish a binding to a server of the interface.

Action: Do not declare arrays of type <kw>(handle_t).

0x1328313a NIDL_HANATTRTRAN

Severity: Varies **Component:** idl

Text: The [handle] attribute is valid only on transmittable types

Explanation: The <v>([handle]) attribute was used on a type that is not transmittable, such as <v>(handle_t). Types with <v>([handle]) are sent from client to server and must have a concrete definition so that they are transmittable.

Action: Remove the <v>([handle]) attribute or change the base type to which it is applied.

0x13283158 NIDL_HANCTYPE

Severity: Varies **Component:** idl

Text: A [handle] binding parameter cannot contain a [%1\$s] type

Explanation: A customized binding handle (a type with the <kw>([handle]) attribute used as the first parameter in an operation) cannot include types with the indicated attribute.

Action: Do not use the indicated attribute with customized binding.

0x13283068 NIDL_HANDLEIN

Severity: Varies **Component:** idl

Text: A [handle] binding parameter must be [in] or [in,out]

Explanation: A parameter of a data type with the <kw>([handle]) attribute as the first parameter in an operation is used to establish a binding to a server of the interface. It must be an <kw>([in]) or <kw>([in,out]) parameter.

Action: Place the <kw>([in]) attribute on the <kw>([handle]) parameter.

0x13283069 NIDL_HANDLEPTR

Severity: Varies **Component:** idl

Text: Pointers to type handle_t are valid only in parameter declarations

Explanation: Data type <kw>(handle_t) is only meaningful when used as the data type of the first parameter in an operation. It is used to establish a binding to a server of the interface.

Action: Do not declare a pointer to data type <kw>(handle_t), except as a parameter.

0x1328306a NIDL_HANFIRSTPRM

Severity: Varies **Component:** idl

Text: A handle_t as other than the first parameter requires a [transmit_as]

Explanation: Data type <kw>(handle_t) is only meaningful when used as the data type of the first parameter in an operation. A bound handle is used to deliver the call to the correct server of the interface. A bound <kw>(handle_t) parameter itself is not transmittable. When the <kw>(handle_t) type is used in other than the first parameter, it must have a <kw>([transmit_as]) clause to convert it to a transmittable type.

Action: Use data type <kw>(handle_t) only as the data type of the first parameter in an operation, unless the defined data type has a <kw>([transmit_as]) clause.

0x1328306b NIDL_HANPIPEBASE

Severity: Varies **Component:** idl

Text: The base type of a pipe cannot be handle_t

Explanation: Data type <kw>(handle_t) is only meaningful when used as the data type of the first parameter in an operation. It is used to establish a binding to a server of the interface.

Action: Do not declare pipes whose base type is <kw>(handle_t).

0x1328306c NIDL_HANPRMIN

Severity: Varies **Component:** idl

Text: A handle_t binding parameter must be an [in] parameter

Explanation: A parameter of type <kw>(handle_t) as the first parameter in an operation establishes a binding to a server of the interface. It must be an <kw>([in]) parameter only.

Action: Remove the <kw>([out]) attribute from the <kw>(handle_t) parameter.

0x1328306d NIDL_HANSTRFLD

Severity: Varies **Component:** idl

Text: Structure fields cannot be of type handle_t

Explanation: Data type <kw>(handle_t) is only meaningful when used as the data type of the first parameter in an operation. It is used to establish a binding to a server of the interface.

Action: Do not declare structure fields of data type <kw>(handle_t).

0x1328306e NIDL_HANUNIMEM

Severity: Varies **Component:** idl

Text: Members of unions cannot be of type handle_t

Explanation: Data type <kw>(handle_t) is only meaningful when used as the data type of the first parameter in an operation. It is used to establish a binding to a server of the interface.

Action: Do not declare <kw>(union) members of data type <kw>(handle_t).

0x1328306f NIDL_HANXMITAS

Severity: Varies **Component:** idl

Text: A handle_t first parameter must not have [transmit_as] type

Explanation: A parameter of type <kw>(handle_t), when used as the data type of the first parameter in an operation, is used to establish a binding to a server of the interface. It is not sent over the wire, therefore it is incorrect for it to have a <kw>([transmit_as]) data type.

Action: Remove the <kw>([transmit_as]) clause from the type's declaration.

0x1328304a NIDL_HYPERCONST

Severity: Varies **Component:** idl

Text: A hyper constant type is not allowed

Explanation: <kw>(hyper) constant is not allowed.

Action: Modify the <kw>(constant) type to one of the supported types: <kw>(long, char, boolean, void *,) or <kw>(char *).

0x13283070 NIDL_IDEMPIPE

Severity: Varies **Component:** idl

Text: The attribute [idempotent] is not valid on an operation with pipes

Explanation: An operation that uses pipes cannot be idempotent, because the <kw>(pipe) data stream can break at unpredictable times.

Action: Remove the <kw>([idempotent]) attribute from the operation, or remove the <kw>(pipe) parameter from the operation.

0x1328301a NIDL_IDTOOLONG

Severity: Varies **Component:** idl

Text: Warning: Identifier: %1\$s too long; maximum is %2\$lu chars

Explanation: The length identifier exceeds the maximum number of characters allowed by IDL for portability.

Action: Shorten the identifier name to within the allowed limit. Make sure the shortened identifier name is unique.

0x13283071 NIDL_IGNARRELEM

Severity: Varies **Component:** idl

Text: The attribute [ignore] on array elements is not allowed

Explanation: The <kw>([ignore]) attribute is not allowed on array elements

Action: Remove the <kw>([ignore]) attribute from the relevant declaration.

0x13283072 NIDL_IGNATTRPTR

Severity: Varies **Component:** idl

Text: The attribute [ignore] is valid only for pointers

Explanation: The <kw>([ignore]) attribute is valid only for pointers.

Action: Remove the <kw>([ignore]) attribute from the declaration.

0x13283073 NIDL_ILLFIELDATTR

Severity: Varies **Component:** idl

Text: The attribute [%1\$s] on a field is not allowed

Explanation: The specified attribute is not valid on a field.

Action: Remove the attribute.

0x13283077 NIDL_ILLINTATTR

Severity: Varies **Component:** idl

Text: The attribute [%1\$s] on an interface is not allowed

Explanation: The specified attribute is not valid on a interface declaration.

Action: Remove the attribute.

0x13283078 NIDL_ILLMEMATTR

Severity: Varies **Component:** idl

Text: The attribute [%1\$s] on a union member is not allowed

Explanation: The specified attribute is not valid on a <kw>(union) member declaration.

Action: Remove the attribute.

0x13283076 NIDL_ILLOPATTR

Severity: Varies **Component:** idl

Text: The attribute [%1\$s] on an operation is not allowed

Explanation: The specified attribute is not valid on an operation.

Action: Remove the attribute.

0x13283074 NIDL_ILLPARAMATTR

Severity: Varies **Component:** idl

Text: The attribute [%1\$s] on a parameter is not allowed

Explanation: The specified attribute is not valid on a parameter declaration.

Action: Remove the attribute.

0x13283075 NIDL_ILLTYPEATTR

Severity: Varies **Component:** idl

Text: The attribute [%1\$s] on a type is not allowed

Explanation: The specified attribute is not valid on a type declaration.

Action: Remove the attribute.

0x13283079 NIDL_IMPHANVAR

Severity: Varies **Component:** idl

Text: An [implicit_handle] variable must either be of type handle_t or have the handle attribute

Explanation: The <kw>([implicit_handle]) variable declared in the ACF must be a handle, either a primitive handle of data type <kw>(handle_t); or a customized handle, a data type with the <kw>([handle]) attribute.

Action: Specify a valid handle data type for the <kw>([implicit_handle]).

0x13283006 NIDL_IMPORTIDL

Severity: Varies **Component:** idl

Text: Importing IDL file %1\$s

Explanation: None

Action: None

0x1328307a NIDL_IMPORTLOCAL

Severity: Varies **Component:** idl

Text: A nonlocal interface cannot import a local interface

Explanation: The <kw>([local]) interface attribute implies that the interface is not part of an RPC application, but used only to generate header files. This causes IDL to suppress any errors specific to RPC that the interface uses as part of an RPC application.

Action: Remove the <kw>([local]) attribute from the imported interface definition. The imported interface does not need a UUID unless the interface defines an operation and you compile it independently.

0x13283007 NIDL_INCLCREATE

Severity: Varies **Component:** idl

Text: Creating include file %1\$s

Explanation: None

Action: None

0x1328301c NIDL_INCLTYPE

Severity: Varies **Component:** idl

Text: Warning: ACF include statement advised for definition of type %1\$s

Explanation: An Attribute Configuration File (ACF) declares a type that is not defined in an IDL file. The type is referenced in the generated stub code, thus its definition needs to be included into the stub code as well.

Action: Place an <kw>(include) statement in the ACF to cause your module that defines the type to be included into the generated header file.

0x1328301b NIDL_INCLUDEEXT

Severity: Varies **Component:** idl

Text: Warning: include filename must not contain a file extension

Explanation: The filename specified in an `<kw>(include)` statement in the Attribute Configuration File (ACF) must not contain a file extension. In a future IDL version, you will be able to specify a programming language, and the IDL compiler will automatically append the appropriate extension.

Action: Remove the file extension. The current IDL compiler always assumes an `<kw>(.h)` extension.

0x1328307b NIDL_INCOMPATV1

Severity: Varies **Component:** idl

Text: V1 attributes are incompatible with this type

Explanation: The version 1 migration attributes are provided for compatibility for applications that were originally written with NCS Version 1 NIDL. These attributes are `<kw>([v1_string])`, `<kw>([v1_array])`, `<kw>([v1_enum])`, and `<kw>([v1_struct])`. In later versions of IDL, strings, conformant and varying arrays, enumerations, and structures are enhanced at the network representation level. A data type with any of the V1 migration attributes cannot contain one of these data types that does not have the corresponding V1 attribute.

Action: Change the data type declaration so all relevant contained types have the corresponding V1 attribute, or remove V1 attributes if compatibility with NCS Version 1 NIDL is unnecessary.

0x1328316d NIDL_INHERITNOTDEF

Severity: Varies **Component:** idl

Text: Inherited interfaces must be imported: %1\$s

Explanation: No definition for the inherited interface identified by the inheritance operator was found.

Action: If your application code is using interface inheritance, then you must import a definition for the inherited interface. Otherwise, edit the `<v>(interface-name).idl` file, and remove any uses of the inheritance `':'` operator.

0x1328316c NIDL_INHERITNOTVAL

Severity: Varies **Component:** idl

Text: IDL inheritance operator `':'` is only valid for `-lang cxx`

Explanation: The Inheritance operator ':' is only valid for interfaces that are compiled with the <kw>(-lang cxx) IDL compiler option.

Action: If your application code is written in C++ and using interface inheritance, then you must use the <kw>(-lang cxx) option to the IDL compiler in order to enable generation of C++ header file and stub files with inheritance. Otherwise, edit the <v>(interface-name).idl file, and remove any uses of the inheritance ':' operator.

0x1328307c NIDL_INTCODEATTR

Severity: Varies **Component:** idl

Text: Interface attributes [code] and [nocode] cannot occur together

Explanation: The <kw>([code]) or <kw>([nocode]) attribute on an interface establishes the default for operations in the interface. You can specify only one of these attributes.

Action: Remove one of the conflicting attributes.

0x13283081 NIDL_INTCONSTINVAL

Severity: Varies **Component:** idl

Text: Integer constant %1\$s is invalid

Explanation: The integer contains incorrect characters.

Action: Correct the specification of the integer.

0x1328307d NIDL_INTDIVBY0

Severity: Varies **Component:** idl

Text: Integer division by zero

Explanation: The evaluation of an integer constant expression resulted in an integer divided by zero.

Action: Correct the expression so a division by zero does not occur.

0x13283111 NIDL_INTERNAL_ERROR

Severity: Varies **Component:** idl

Text: Internal IDL compiler error: Module %1\$s, Line %2\$lu

Explanation: An internal IDL compiler error was found.

Action: Submit a Software Performance Report and notify your software support representative so the appropriate action can be taken.

0x1328307e NIDL_INTLINEATTR

Severity: Varies **Component:** idl

Text: Interface attributes [in_line] and [out_of_line] cannot occur together

Explanation: The <kw>([in_line]) or <kw>([out_of_line]) attribute on an interface establishes the default for types in the interface. You can specify only one of these attributes.

Action: Remove one of the conflicting attributes.

0x1328307f NIDL_INTNAMDIF

Severity: Varies **Component:** idl

Text: ACF interface name %1\$s differs from IDL interface name %2\$s

Explanation: The interface name in an interface's Attribute Configuration File must be identical to the interface name in the IDL source.

Action: Change the ACF to use the correct interface name.

0x13283080 NIDL_INTOVERFLOW

Severity: Varies **Component:** idl

Text: Integer value overflows %1\$s

Explanation: The integer value specified is too large to be contained in the destination of size <v>(size).

Action: Either reduce the size of the integer value, or increase the size of the destination declaration.

0x13283167 NIDL_INTREFNOTALO

Severity: Varies **Component:** idl

Text: Interface reference %1\$s allowed only as target of a * or & pointer

Explanation: When an IDL interface is compiled with <kw>(-lang cxx), the interface name also implicitly defines a type, similar to a C++ class. Pointers to or references

to this interface type may be used elsewhere in the interface. Any other uses of this type are not valid.

Action: Change the declaration to use a * or &, or change the type used in the declaration.

0x1328301d NIDL_INTSIZEREQ

Severity: Varies **Component:** idl

Text: Warning: A size specifier is required; long assumed

Explanation: A size specifier is required when specifying the <kw>(int) data type.

Action: Place a size specifier – <kw>(short, small, long,) or <kw>(hyper) – before the <kw>(int) keyword.

0x13283082 NIDL_INTUUIDREQ

Severity: Varies **Component:** idl

Text: Interface UUID must be specified

Explanation: The interface does not have the <kw>([uuid]) attribute required for the complete definition of the interface.

Action: Either add the <kw>([local]) attribute to the interface, or generate a UUID with the <kw>(uuidgen) utility supplied with IDL and specify the UUID value in the interface <kw>([uuid]) attribute.

0x13283083 NIDL_INVARRIND

Severity: Varies **Component:** idl

Text: Invalid array bound type

Explanation: Array indices must be integers.

Action: Change the array declaration so the fixed bounds are integer constants.

0x13283112 NIDL_INVBUG

Severity: Varies **Component:** idl

Text: Command option -bug %1\$lu is not known

Explanation: The documentation defines all the valid integers that can accompany the <kw>(-bug) and <kw>(-no_bug) options. You have chosen an invalid value.

Action: See the documentation for the correct number.

0x13283084 NIDL_INVCASETYP

Severity: Varies **Component:** idl

Text: Invalid case label type

Explanation: The values in <kw>(case) clauses in discriminated <kw>(union)s must be integer, enumeration, boolean, or character values that match the data type of the <kw>(union) discriminator.

Action: Modify the invalid clause to use a value of the correct data type.

0x13283085 NIDL_INVCHARLIT

Severity: Varies **Component:** idl

Text: Invalid character literal

Explanation: The specification of the character literal is invalid.

Action: Character literals can be specified as a single printing character or one of the following escape sequences: <literal>(\)n, <literal>(\)t, <literal>(\)v, <literal>(\)b, <literal>(\)r, <literal>(\)f, <literal>(\)a, <literal>(\)<literal>(\), <literal>(\)?, <literal>(\)', <literal>(\)"', <literal>(\)<v>(ooo), <literal>(\)x<v>(hh) (where <v>(ooo) are octal digits, and <v>(hh) are hexadecimal digits).

0x1328314a NIDL_INVFILESPEC

Severity: Varies **Component:** idl

Text: Invalid file specification: %1\$s

Explanation: An invalid file specification was given.

Action: Check the files names specified on the command line for proper syntax.

0x13283113 NIDL_INVNOBUG

Severity: Varies **Component:** idl

Text: Command option -no_bug %1\$lu is not known

Explanation: The documentation defines all the valid integers that can accompany the <kw>(-bug) and <kw>(-no_bug) options. You have chosen an invalid value.

Action: See the documentation for the correct number.

0x13283086 NIDL_INVOCTDIGIT

Severity: Varies **Component:** idl

Text: Invalid octal digit in %1\$s

Explanation: An octal integer contains a digit that is not valid. Integer constants with a leading zero are interpreted as octal values. Only the digits 0 through 7 are valid in octal value.

Action: If the integer is not intended to be specified in octal, remove the leading zeros. Otherwise correct the value to contain only octal digits.

0x13283087 NIDL_INVOKECPP

Severity: Varies **Component:** idl

Text: Could not invoke the C preprocessor

Explanation: The IDL compiler is unable to invoke the C preprocessor to preprocess the IDL file before compiling it.

Action: If you do not need the C preprocessor, you can use a command line option to prevent the IDL compiler from calling it. If you specified the C preprocessor to invoke with a command line option, check to make sure you gave the correct file specification. If you do not specify a C preprocessor, the IDL compiler looks in a default directory for it. The C preprocessor may not be installed in the expected directory.

0x13283088 NIDL_INVOOLPRM

Severity: Varies **Component:** idl

Text: The attribute [out_of_line] is not allowed on parameters

Explanation: IDL does not allow the <kw>([out_of_line]) attribute on parameters.

Action: Apply the <kw>([out_of_line]) attribute to the type definition rather than the parameter. If you do not want all instances of the type <kw>([out_of_line]), define two separate types, one of which has the <kw>([out_of_line]) attribute.

0x13283089 NIDL_INVOPTION

Severity: Varies **Component:** idl

Text: Command option -%1\$s %2\$s is not valid

Explanation: The <v>(option-value) specified is not valid for the option with which it is used.

Action: See the documentation for the correct command line syntax.

0x1328308a NIDL_INVPARAMS

Severity: Varies **Component:** idl

Text: Invalid parameters on command line:

Explanation: There are extra parameters on the command line.

Action: You may have attempted to use a value on a option that does not take a value, or attempted to compile more than one interface at once. See the documentation for the proper command line syntax.

0x1328308b NIDL_INVPTRCTX

Severity: Varies **Component:** idl

Text: Pointers to context handles are valid only in parameter declarations

Explanation: IDL does not allow pointers to context handles, except in parameter declarations.

Action: Do not declare a pointer to a <kw>(context_handle), except as a parameter.

0x1328308c NIDL_INVPTRPIPE

Severity: Varies **Component:** idl

Text: Pointers to pipes are valid only in parameter declarations

Explanation: IDL does not allow a pointer to a <kw>(pipe), except in a parameter declaration.

Action: Do not declare a pointer to a <kw>(pipe), except as a parameter.

0x13283137 NIDL_LANGATTRNS

Severity: Varies **Component:** idl

Text: Warning: Attribute [%1\$s] not supported for target language

Explanation: IDL does not support the indicated attribute for the target language selected.

Action: In some cases the attribute can be removed. For example, the <kw>(v1_) attributes are only necessary if interoperation with NCS Version 1 is required.

0x13283130 NIDL_LANGCFMTSTRCT

Severity: Varies **Component:** idl

Text: Warning: Conformant structures not supported in target language

Explanation: An IDL conformant structure does not have a source representation in the target language selected.

Action: The IDL conformant array will be declared as a one-element array in the generated language header file. Your application code might be able to use the address of this array to access other array elements, depending on the target language. Alternatives are to write application code that uses the construct in another programming language, or to change the IDL source to use a construct that is supported by the target language.

0x13283131 NIDL_LANGCFMTSTRNG

Severity: Varies **Component:** idl

Text: Warning: Conformant strings not supported in target language

Explanation: An IDL conformant string does not have a source representation in the target language selected.

Action: The IDL conformant array will be declared as a one-element array in the generated language header file. Your application code might be able to use the address of this array to access other array elements, depending on the target language. Alternatives are to write application code that uses the construct in another programming language, or to change the IDL source to use a construct that is supported by the target language.

0x13283132 NIDL_LANGMAPCHAR

Severity: Varies **Component:** idl

Text: Warning: Character doesn't map to target language

Explanation: A character in an IDL character or string constant does not have a source representation in the target language selected.

Action: The character will be translated to a '?' in the generated language header file. Edit the file manually as necessary.

0x13283135 NIDL_LANGMAXDIM

Severity: Varies **Component:** idl

Text: Target language supports maximum of %1\$lu array dimensions

Explanation: The target language selected does not support arrays with more than the indicated number of dimensions.

Action: Such arrays will have no corresponding declaration in the generated language header file. Application code using such arrays should be written in another programming language.

0x13283136 NIDL_LANGMIXCASE

Severity: Varies **Component:** idl

Text: Warning: Name %1\$s differs from a previous name only in case

Explanation: The target language selected is not case-sensitive with respect to identifiers; that is, any two identifiers that differ only in case are considered to be identical. The IDL source contains two distinct identifiers that differ only in case, but they conflict with each other in the generated language header file.

Action: Edit the IDL source code to remove the conflict.

0x13283133 NIDL_LANGPIPESNS

Severity: Varies **Component:** idl

Text: Warning: Pipes not supported for target language

Explanation: The data structures necessary to manage IDL pipes do not have a source representation in the target language selected.

Action: Pipe objects will have no corresponding definition in the generated language header file. Application code for operations with pipes should be written in another programming language.

0x13283134 NIDL_LANGUNSFNRS

Severity: Varies **Component:** idl

Text: Warning: Non-scalar function result converted to trailing [out] parameter

Explanation: The target language selected does not allow the function result argument of a routine to be a non-scalar type. The IDL compiler converts such a construct to a trailing <kw>([out]) parameter.

Action: No action is required. You might want to edit your IDL source and change the declaration from a function result to an <kw>([out]) parameter in order to map naturally to the target language.

0x1328308d NIDL_LASTINATTR

Severity: Varies **Component:** idl

Text: The [last_is] parameter must have the [in] attribute

Explanation: The <kw>([last_is]) attribute specifies a parameter that contains the upper data limit of a varying array. Since the array has the <kw>([in]) attribute, the upper data limit parameter must also be <kw>([in]) so the number of array elements to send from client to server is known.

Action: Change the data limit parameter referenced by the <kw>([last_is]) clause to have the <kw>([in]) attribute.

0x1328308e NIDL_LASTLENCONF

Severity: Varies **Component:** idl

Text: The attributes [last_is] and [length_is] cannot occur together

Explanation: The <kw>([last_is]) and <kw>([length_is]) attributes both specify a field or parameter used to determine the data limit of a varying array. You cannot use both.

Action: The <kw>([last_is]) attribute specifies the index of the last valid element. The <kw>([length_is]) attribute specifies the total number of elements in the array. Remove one of these attributes.

0x1328308f NIDL_LASTYPEINT

Severity: Varies **Component:** idl

Text: A [last_is] variable must be a small, short, or long integer

Explanation: The <kw>([last_is]) attribute specifies a field or parameter that contains the upper data limit of a varying array. Array data limits must be integers which are not <kw>(hyper).

Action: Change the upper data limit field or parameter referenced by the <kw>([last_is]) clause to be of integer data type.

0x13283090 NIDL_LBLESSUB

Severity: Varies **Component:** idl

Text: The lower bound must not be greater than the upper bound

Explanation: The syntax of an array requires the lower bound to precede the upper bound.

Action: Modify the array declaration so the lower bound is first.

0x13283008 NIDL_LEGALVALS

Severity: Varies **Component:** idl

Text: Legal values are:

Explanation: Identifies a list of legal values for a command option.

Action: Re-enter the option using one of the legal values.

0x13283091 NIDL_LENINATTR

Severity: Varies **Component:** idl

Text: The [length_is] parameter must have the [in] attribute

Explanation: The <kw>([length_is]) attribute specifies a parameter used to determine the data length of a varying array. Since the array has the <kw>([in]) attribute, the <kw>(length_is) parameter must also be <kw>([in]) so the number of array elements to send from client to server is known.

Action: Change the parameter referenced by the <kw>([length_is]) clause to have the <kw>([in]) attribute.

0x13283092 NIDL_LENTYPEINT

Severity: Varies **Component:** idl

Text: A [length_is] variable must be a small, short, or long integer

Explanation: The <kw>([length_is]) attribute specifies a field or parameter that contains the data length of a varying array. The field or parameter must be integers which are not <kw>(hyper).

Action: Change the field or parameter referenced by the <kw>([length_is]) clause to be of integer data type.

0x13283009 NIDL_LINEFILE

Severity: Varies **Component:** idl

Text: File %1\$s, line %2\$lu

Explanation: Identifies the filename and source line number associated with an error.

Action: None. This is an informational message.

0x1328301e NIDL_LINENONSCAL

Severity: Varies **Component:** idl

Text: Warning: The attributes [in_line] and [out_of_line] apply only to non-scalar types

Explanation: Scalar data types are always marshalled in-line, since there is performance degradation if they are marshalled out-of-line.

Action: Do not use the <kw>([in_line]) and <kw>([out_of_line]) attributes on scalar types.

0x1328316a NIDL_LOOKUPNOTVAL

Severity: Varies **Component:** idl

Text: ACF attribute [cxx_lookup] is only valid for -lang cxx

Explanation: The ACF <kw>([cxx_lookup]) interface attribute only pertains to interfaces that are compiled with the <kw>(-lang cxx) IDL compiler option.

Action: If your application code is written in C++, then you must use the <kw>(-lang cxx) option to the IDL compiler in order to enable generation of C++ header file and stub files. Otherwise, edit the <v>(interface-name)).acf file, and remove the <kw>([cxx_lookup]) attribute.

0x13283093 NIDL_MAJORTOOLARGE

Severity: Varies **Component:** idl

Text: The major version number is too large; the maximum is %1\$lu

Explanation: The major version number is too large.

Action: Replace the major version number (the portion to the left of the period) with a value less than <v>(number).

0x13283094 NIDL_MAXCFMTYPE

Severity: Varies **Component:** idl

Text: The attribute [max_is] cannot be applied to dimension %1\$lu; upper bound is not dynamic

Explanation: A <kw>([max_is]) variable is only valid for array dimensions that have an upper bound that is not fixed.

Action: If the array is multidimensional, you may have specified the <kw>([max_is]) variable for the wrong dimension. See the documentation for the proper syntax. If the array has only one dimension, the <kw>([max_is]) clause is invalid, since the array's upper bound is fixed. You may have meant to use a <kw>([last_is]) clause. See the documentation for the distinctions between conformant and varying arrays and their attributes.

0x13283095 NIDL_MAXIDINTF

Severity: Varies **Component:** idl

Text: Maximum identifier length for interface name is %1\$lu characters

Explanation: The IDL compiler constructs new identifier names that are referenced by generated stub code from the interface name. Therefore, the number of characters allowed in an interface name is less than for other identifiers.

Action: Shorten the interface name.

0x13283098 NIDL_MAXIDTYPCH

Severity: Varies **Component:** idl

Text: Maximum identifier length for [context_handle] type is %1\$lu characters

Explanation: The IDL compiler constructs new identifier names that are referenced by generated stub code from the names of any <kw>([context_handle]) data types. Therefore, the number of characters allowed in such a data type is less than for other identifiers.

Action: Shorten the data type name.

0x1328315f NIDL_MAXIDTYPE

Severity: Varies **Component:** idl

Text: Maximum identifier length for [%1\$s] type is %2\$lu characters

Explanation: A type name with the indicated attribute is used to construct other names with a prefix and/or suffix concatenated to it. This further restricts the length of the name to the indicated value, to make sure that the maximum identifier length is not exceeded in the generated names.

Action: Shorten the type name.

0x13283097 NIDL_MAXIDTYPHAN

Severity: Varies **Component:** idl

Text: Maximum identifier length for [handle] type is %1\$lu characters

Explanation: The IDL compiler constructs new identifier names that are referenced by generated stub code from the names of any <kw>([handle]) data types. Therefore, the number of characters allowed in such a data type is less than for other identifiers.

Action: Shorten the data type name.

0x1328309c NIDL_MAXIDTYPOOL

Severity: Varies **Component:** idl

Text: Maximum identifier length for [out_of_line] type is %1\$lu characters

Explanation: The IDL compiler constructs new identifier names that are referenced by generated stub code from the names of any <kw>([out_of_line]) data types. Therefore, the number of characters allowed in such a data type is less than for other identifiers.

Action: Shorten the data type name.

0x1328309a NIDL_MAXIDTYPIPE

Severity: Varies **Component:** idl

Text: Maximum identifier length for pipe type is %1\$lu characters

Explanation: The IDL compiler constructs new identifier names that are referenced by generated stub code from the names of any <kw>(pipe) data types. Therefore, the number of characters allowed in such a data type is less than for other identifiers.

Action: Shorten the data type name.

0x13283099 NIDL_MAXIDTYPPT

Severity: Varies **Component:** idl

Text: Maximum identifier length for pointed-to type is %1\$lu characters

Explanation: The IDL compiler constructs new identifier names that are referenced by generated stub code from the names of any pointed-to data types. Therefore, the number of characters allowed in such a data type is less than for other identifiers.

Action: Shorten the data type name.

0x1328309b NIDL_MAXIDTYPRA

Severity: Varies **Component:** idl

Text: Maximum identifier length for [represent_as] type is %1\$lu characters

Explanation: The IDL compiler constructs new identifier names that are referenced by generated stub code from the names of any <kw>([represent_as]) data types. Therefore, the number of characters allowed in such a data type is less than for other identifiers.

Action: Shorten the data type name.

0x13283096 NIDL_MAXIDTYPTA

Severity: Varies **Component:** idl

Text: Maximum identifier length for type with [transmit_as] is %1\$lu characters

Explanation: The IDL compiler constructs new identifier names that are referenced by generated stub code from the names of any <kw>([transmit_as]) data types. Therefore, the number of characters allowed in such a data type is less than for other identifiers.

Action: Shorten the data type name.

0x1328309d NIDL_MAXINATTR

Severity: Varies **Component:** idl

Text: A [max_is] parameter must have the [in] attribute

Explanation: The <kw>([max_is]) attribute specifies a parameter that contains the upper bound of a conformant array. This must be an <kw>([in]) attribute so the server stub code knows how much space to allocate for the array.

Action: Change the upper bound parameter referenced by the <kw>([max_is]) clause to have the <kw>([in]) attribute.

0x1328309e NIDL_MAXSIZEATTR

Severity: Varies **Component:** idl

Text: The attribute [max_is] or [size_is] is required

Explanation: An array with an upper bound that is not fixed is used as a field of a structure or as a parameter of an operation. You must specify a field or parameter that determines the allocation of the array at runtime.

Action: Use a <kw>([max_is]) or <kw>([size_is]) attribute to specify the field or parameter that contains the size information.

0x1328309f NIDL_MAXSIZECONF

Severity: Varies **Component:** idl

Text: The attributes [max_is] and [size_is] cannot occur together

Explanation: The <kw>([max_is]) and <kw>([size_is]) attributes both specify a field or parameter used to determine the upper bound of a conformant array. You cannot use both.

Action: The <kw>([max_is]) attribute specifies the index of the last possible array element. The <kw>([size_is]) attribute specifies the total number of possible elements in the array. Remove one of the attributes.

0x132830a0 NIDL_MAXTYPEINT

Severity: Varies **Component:** idl

Text: A [max_is] variable must be a small, short, or long integer

Explanation: The <kw>([max_is]) attribute specifies a field or parameter that contains the upper bound of a conformant array. Array bounds must be integers which are not <kw>(hyper).

Action: Change the upper bound field or parameter referenced by the <kw>([max_is]) clause to be of integer data type.

0x13283114 NIDL_MAXWARN**Severity:** Varies **Component:** idl**Text:** Reached maximum of %1\$l warnings; exiting**Explanation:** The IDL compiler has a predefined maximum number of warnings it produces before aborting the compilation. This feature suppresses what may be the same warning over and over.**Action:** Fix the warnings you get, or recompile the IDL file or specify the <kw>(-no_warn) option.**0x132830a2 NIDL_MAYBEOUTPRM****Severity:** Varies **Component:** idl**Text:** A [maybe] operation cannot have [out] parameters or a function result**Explanation:** The <kw>([maybe]) attribute specifies that the operation's caller does not require and does not receive a response or fault indication. Do not use an <kw>([out]) parameter or a function result in a <kw>([maybe]) operation.**Action:** Remove the <kw>([maybe]) attribute from the operation, or remove all <kw>([out]) parameters from the function and declare its result type as <kw>(void).**0x13283001 NIDL_MESSAGE_VERSION****Severity:** Varies **Component:** idl**Text:** 3077**Explanation:** None**Action:** None**0x132830a3 NIDL_MINATTREQ****Severity:** Varies **Component:** idl**Text:** The attribute [min_is] is required**Explanation:** An array with a lower bound that is not fixed is used as a field of a structure or as a parameter of an operation. You must specify a field or parameter that determines the lower bound of the array at runtime.**Action:** Use a <kw>([min_is]) attribute to specify the field or parameter that contains the lower bound.

0x132830a4 NIDL_MINCFMTYPE

Severity: Varies **Component:** idl

Text: The attribute [min_is] cannot be applied to dimension %1\$lu; lower bound is not dynamic

Explanation: A <kw>([min_is]) variable is valid only for array dimensions that have a lower bound that is not fixed.

Action: If the array is multidimensional, you may have specified the <kw>([min_is]) variable for the wrong dimension. See the documentation for the proper syntax. If the array has only one dimension, the <kw>([min_is]) clause is invalid, since the array's lower bound is fixed. The <kw>([first_is]) clause is valid for single dimension arrays. See the documentation for the distinctions between conformant and varying arrays and their attributes.

0x132830a5 NIDL_MININATTR

Severity: Varies **Component:** idl

Text: A [min_is] parameter must have the [in] attribute

Explanation: The <kw>([min_is]) attribute specifies a parameter that contains the lower bound of a conformant array. This parameter must have an <kw>([in]) attribute so the server stub code will allocate adequate space for the array.

Action: Change the lower bound parameter referenced by the <kw>([min_is]) clause to have the <kw>([in]) attribute.

0x132830a6 NIDL_MINORTOOLARGE

Severity: Varies **Component:** idl

Text: The minor version number is too large; the maximum is %1\$lu

Explanation: The minor version number is too large.

Action: Replace the minor version number (the portion to the right of the period) with a value less than <v>(number).

0x132830a7 NIDL_MINTYPEINT

Severity: Varies **Component:** idl

Text: A [min_is] variable must be a small, short, or long integer

Explanation: The <kw>([min_is]) attribute specifies a field or parameter that contains the lower bound of a conformant array. Array bounds must be integers that are not <kw>(hyper).

Action: Change the lower bound field or parameter referenced by the <kw>([min_is]) clause so that it is a small, short, or long integer.

0x1328304d NIDL_MISSONARR

Severity: Varies **Component:** idl

Text: Missing "]" on array bound

Explanation: The closing bracket on an array bound specification was not found. It may have been omitted, or some other syntax error may cause IDL to overlook the bracket.

Action: Add the closing bracket if it is missing, otherwise make sure there are no other syntax errors.

0x1328304c NIDL_MISSONATTR

Severity: Varies **Component:** idl

Text: Missing "]" on attribute list

Explanation: The closing bracket on an attribute list was not found. It may have been omitted, or some other syntax error may cause IDL to overlook the bracket.

Action: Add the closing bracket if it is missing, otherwise make sure there are no other syntax errors.

0x1328304b NIDL_MISSONINTER

Severity: Varies **Component:** idl

Text: Missing "}" on interface declaration

Explanation: The closing brace on the interface declaration was not found. It may have been omitted, the nesting of other braces may be incorrect, or some other syntax error may cause IDL to overlook a brace.

Action: Add the closing brace if missing, otherwise make sure all other braces are specified in pairs, and there are no other syntax errors.

0x1328304e NIDL_MISSONOP

Severity: Varies **Component:** idl

Text: Missing result type on operation declaration

Explanation: No data type was found for the result of an operation while processing what appeared to be an operation declaration. All operations must have an explicit result type.

Action: If the result type of an operation is omitted, explicitly specify it. If no result is returned from the operation, specify <kw>(void) as the result type. This error can also occur due to a previous syntax error.

0x1328304f NIDL_MISSONPARAM

Severity: Varies **Component:** idl

Text: Missing type on parameter declaration

Explanation: No data type is found for the parameter.

Action: If the parameter type is omitted, explicitly specify it. This error can also occur due to a previous syntax error.

0x1328301f NIDL_MISSPTRCLASS

Severity: Varies **Component:** idl

Text: Warning: Missing pointer class for %1\$s; [ptr], [ref], or [unique] required

Explanation: A pointer declaration does not have pointer class attribute and no <kw>([pointer_default]) attribute was specified on the interface.

Action: All pointers must have one of the pointer class attributes: <kw>([ptr]), <kw>([ref]), or <kw>([unique]). Either add one of these attributes at the location of the pointer declaration, or add the <kw>([pointer_default]) attribute to the interface to specify the class to be used as the default for the module.

0x13283020 NIDL_MIXEDARRATTR

Severity: Varies **Component:** idl

Text: Warning: The attributes [max_is,length_is] or [size_is,last_is] used together

Explanation: The <kw>([max_is]) attribute specifies the array's upper bound while the <kw>([size_is]) attribute specifies the total number of array elements. Similarly,

<kw>([last_is]) specifies the upper data limit while <kw>([length_is]) specifies the number of valid data elements.

Action: Mixing the attributes can be incorrect. Make sure the declaration is correct and change if necessary.

0x13283021 NIDL_MULATTRDEF

Severity: Varies **Component:** idl

Text: Warning: An attribute is defined multiple times

Explanation: An attribute is repeated multiple times in an attribute list.

Action: Remove all but one occurrence of the offending attribute.

0x132830a8 NIDL_NAMEALRDEC

Severity: Varies **Component:** idl

Text: Name already declared: %1\$s

Explanation: The name referenced is already declared.

Action: Modify the interface and select a unique name for the given item.

0x1328300a NIDL_NAMEDECLAT

Severity: Varies **Component:** idl

Text: Name %1\$s is declared in file %2\$s, line %3\$lu

Explanation: Gives the source file and line number of source text to help you diagnose the previous error.

Action: None. This is an informational message.

0x132830a9 NIDL_NAMENOTCONST

Severity: Varies **Component:** idl

Text: Name is not a constant: %1\$s

Explanation: The name used to define a new constant is not the name of a <kw>(constant).

Action: Modify the <kw>(constant) definition to use a predefined <kw>(constant) name.

0x132830aa NIDL_NAMENOTFIELD

Severity: Varies **Component:** idl

Text: Name is not a field: %1\$s

Explanation: The name referenced in an array attribute is not declared as a field in the structure being defined.

Action: Declare a field in the structure that can be used in the array attribute.

0x132830ab NIDL_NAMENOTFND

Severity: Varies **Component:** idl

Text: Name not found: %1\$s

Explanation: The referenced name is not defined.

Action: Modify the interface to define an appropriate type for the specified name.

0x132830ac NIDL_NAMENOTPARAM

Severity: Varies **Component:** idl

Text: Name is not a parameter: %1\$s

Explanation: The name referenced in an array attribute is not declared as a parameter in the operation being defined.

Action: Declare a parameter in the operation that can be used in the array attribute.

0x132830ad NIDL_NAMENOTTYPE

Severity: Varies **Component:** idl

Text: Name is not a type: %1\$s

Explanation: The name referenced is not a type definition.

Action: Modify the interface to specify a unique type specification instead of the name referenced.

0x132830ae NIDL_NAMEPREVDECLAT

Severity: Varies **Component:** idl

Text: Name %1\$s previously declared in file %2\$s, line %3\$lu

Explanation: The name referenced was previously declared at the specified location.

Action: Remove this declaration, if it is redundant, or change the spelling so it does not conflict with the existing name.

0x1328300b NIDL_NAMEREFAT

Severity: Varies **Component:** idl

Text: Name is referenced in file %1\$s, line %2\$lu

Explanation: Gives the source file and line number of source text to help you diagnose the previous error.

Action: None. This is an informational message.

0x13283022 NIDL_NAMETOOLONG

Severity: Varies **Component:** idl

Text: Warning: Generated name too long at line %1\$lu.

Explanation: The compiler generated an identifier that is too long for some standard C compiler implementations.

Action: Shorten the name at the specified line.

0x13283121 NIDL_NEUARRAY

Severity: Varies **Component:** idl

Text: Arrays of nonencapsulated unions are not allowed

Explanation: IDL does not allow arrays of nonencapsulated unions since there is no way to apply a different discriminator to each element.

Action: Use an array of encapsulated unions.

0x13283122 NIDL_NEUREPAS

Severity: Varies **Component:** idl

Text: A [represent_as] type cannot be a nonencapsulated union

Explanation: A type referenced in a <kw>([represent_as]) clause cannot be a nonencapsulated union, since there is no defined way to communicate the union discriminator to/from <kw>([represent_as]) data translation routines.

Action: Use an encapsulated union for the local representation type.

0x13283123 NIDL_NEUREPTYPE

Severity: Varies **Component:** idl

Text: A nonencapsulated union cannot have a [represent_as] type

Explanation: A nonencapsulated union type cannot be defined to have a local representation type, since there is no defined way to communicate the union discriminator to/from <kw>([represent_as]) data translation routines.

Action: Use an encapsulated union, or reconsider the need for a different local representation type for the union.

0x13283124 NIDL_NEUSWATTR

Severity: Varies **Component:** idl

Text: A nonencapsulated union declaration must have a [switch_is] attribute

Explanation: A <kw>([switch_is]) attribute is required on an instance of a nonencapsulated union type to identify the union discriminator variable.

Action: Provide a <kw>([switch_is]) clause that specifies a field or parameter that is the union discriminator, or use an encapsulated union, where the union discriminator variable is encapsulated as a field within the union type.

0x13283125 NIDL_NEUSWPTR

Severity: Varies **Component:** idl

Text: The union switch variable %1\$s cannot be a [ptr] or [unique] pointer

Explanation: A <kw>([switch_is]) attribute clause in the source IDL specifies its value by dereferencing a pointer field or parameter. This is invalid if the pointer variable has either of the <kw>([ptr]) or <kw>([unique]) attributes, since both allow the pointer to be <kw>(NULL). If the pointer were <kw>(NULL), there would be no way to determine the union discriminator.

Action: Either redeclare the <kw>([switch_is]) variable to be a scalar rather than a pointer, or change the <kw>([switch_is]) variable to be a <kw>([ref]) pointer.

0x13283126 NIDL_NEUSWTYPE

Severity: Varies **Component:** idl

Text: A nonencapsulated union type must have a [switch_type] attribute

Explanation: A <kw>([switch_type]) attribute is required on a definition of a nonencapsulated union type to identify the data type of the union discriminator.

Action: Provide a <kw>([switch_type]) clause that specifies a valid union discriminator data type.

0x13283127 NIDL_NEUXMITAS

Severity: Varies **Component:** idl

Text: A [transmit_as] type cannot be a nonencapsulated union

Explanation: A type referenced in a <kw>([transmit_as]) clause cannot be a nonencapsulated union, since there is no defined way to communicate the union discriminator to/from <kw>([transmit_as]) data translation routines.

Action: Use an encapsulated union for the transmissible type.

0x13283128 NIDL_NEUXMITYPE

Severity: Varies **Component:** idl

Text: A nonencapsulated union cannot have a [transmit_as] type

Explanation: A nonencapsulated union type cannot be defined to have a transmissible type, since there is no defined way to communicate the union discriminator to/from <kw>([transmit_as]) data translation routines.

Action: Use an encapsulated union, or reconsider the need for a different transmissible type for the union.

0x1328316b NIDL_NEWNOTVAL

Severity: Varies **Component:** idl

Text: ACF attribute [cxx_new] is only valid for -lang cxx

Explanation: The ACF <kw>([cxx_new]) operation attribute only pertains to interfaces that are compiled with the <kw>(-lang cxx) IDL compiler option.

Action: If your application code is written in C++, then you must use the <kw>(-lang cxx) option to the IDL compiler in order to enable generation of C++ header file and stub files. Otherwise, edit the <v>(interface-name).acf file, and remove any uses of the <kw>([cxx_new]) attribute.

0x1328300c NIDL_NEWUUID

Severity: Varies **Component:** idl

Text: %1\$s

Explanation: None

Action: None

0x132830af NIDL_NLSCATVER

Severity: Varies **Component:** idl

Text: %1\$sNLS message catalog version mismatch in \"%2\$s\", Expected: \"%3\$lu\", Actual: \"%4\$s\"

Explanation: None

Action: None

0x132830b0 NIDL_NLSWRONG

Severity: Varies **Component:** idl

Text: %1\$sError messages may be incorrect

Explanation: The error messages reported by the IDL compiler are stored in an NLS message catalog. The catalog <v>(filename) is not the same version as the IDL compiler being invoked. The error messages reported may therefore be incorrect or cause the compiler to terminate abnormally.

Action: Check the definition of the NLS environment variable NLSPATH and verify that it searches the appropriate directories. The default location for the IDL compiler message catalog is <v>(<literal>(<)dcshared>)<kw>(/nls/msg/)<v>(LANG)<kw>(/)

0x13283023 NIDL_NOCODEOPS

Severity: Varies **Component:** idl

Text: Warning: At least one operation must have the [code] attribute

Explanation: All of the operations in the interface are marked so no code is generated for them in the stub modules.

Action: If you used the ACF <kw>([nocode]) attribute on the interface, be sure to specify <kw>([code]) on at least one operation. To disable stub generation entirely use a command line option.

0x13283024 NIDL_NOENDPOINT

Severity: Varies **Component:** idl

Text: Warning: No endpoint can be found in the endpoint specification \"%1\$s\"

Explanation: The syntax specified in the <kw>(endpoint) specification string does not contain an <kw>(endpoint) specification. The entire string is assumed to be the protocol name and the <kw>(endpoint) remains unspecified in the generated stubs.

Action: Correct the syntax of the <kw>(endpoint) specification.

0x13283165 NIDL_NOFLTPARAM

Severity: Varies **Component:** idl

Text: Warning: A [fault_status] parameter has no utility in this operation

Explanation: A <kw>([fault_status]) parameter is used in an operation where no fault can ever occur. An example is an encoding services operation, i.e. one using <kw>([encode]) or <kw>([decode]) - there is no remote entity from which a fault might be received.

Action: Perhaps you meant to use a <kw>([comm_status]) attribute. If not, the parameter can be removed from the operation or the <kw>([fault_status]) attribute can be removed from the parameter.

0x132830b1 NIDL_NONINTEXP

Severity: Varies **Component:** idl

Text: Non-integer values are not allowed in expressions

Explanation: One of the values in the expression is not an integer (or one that can be promoted to integer).

Action: Correct the expression to contain only integer values.

0x13283025 NIDL_NONPORTCHAR

Severity: Varies **Component:** idl

Text: Warning: Character constant cannot be portable across character sets

Explanation: You used an integer value to specify a character. This cannot be portable across different character sets (ASCII and EBCDIC).

Action: Consider your portability requirements.

0x13283164 NIDL_NOPORTANON

Severity: Varies **Component:** idl

Text: Warning: Use of anonymous %1\$s may not be portable across C compilers

Explanation: The source IDL contains an IDL language construct, such as an <kw>(enum), declared as an unnamed type within another definition. The generated stub code will compile cleanly under some C compilers, but generate errors from others. The potential errors are due to differences in the scoping of identifiers across C compilers.

Action: Use a <kw>(typedef) statement to define the base <kw>(type) as a named type, then use the type name in any subsequent declarations in place of an anonymous definition.

0x13283161 NIDL_NOPORTATTR

Severity: Varies **Component:** idl

Text: Warning: Use of [%1\$s] attribute requires %2\$s

Explanation: The indicated attribute is not supported by DCE V1.0, and thus should not be used if interoperability with implementations of DCE V1.0 is required.

Action: Do not use the feature if interoperability with DCE V1.0 is required. Otherwise, specify the extended standard option on the compiler command to suppress the warning.

0x1328313f NIDL_NOPORTCFMT

Severity: Varies **Component:** idl

Text: Warning: Use of conformant minor array dimension requires %1\$s

Explanation: An array that is conformant in a minor dimension, i.e. other than the first dimension, is not portable to all implementations of DCE V1.0.

Action: Use an array that is conformant in only the first dimension, or specify the extended standard option on the compiler command.

0x13283160 NIDL_NOPORTEXCEP

Severity: Varies **Component:** idl

Text: Warning: Use of user-defined exceptions requires %1\$s

Explanation: Use of user-defined exceptions is not interoperable with implementations of DCE V1.0.

Action: Do not use the feature if interoperability with DCE V1.0 is required. Otherwise, specify the extended standard option on the compiler command to suppress the warning.

0x1328311a NIDL_NOPORTNEU

Severity: Varies **Component:** idl

Text: Warning: Use of a nonencapsulated union requires %1\$s

Explanation: A nonencapsulated union is not portable to all implementations of DCE V1.0.

Action: Use an encapsulated union instead or specify the extended standard option on the compiler command.

0x1328313e NIDL_NOPORTNZLB

Severity: Varies **Component:** idl

Text: Warning: Use of nonzero array lower bound requires %1\$s

Explanation: A nonzero array lower bound is not portable to all implementations of DCE V1.0.

Action: Use an array with lower bound zero instead or specify the extended standard option on the compiler command.

0x1328311b NIDL_NOPORTUNIQUE

Severity: Varies **Component:** idl

Text: Warning: Use of [unique] pointers requires %1\$s

Explanation: A <kw>([unique]) pointer is not portable to all implementations of DCE V1.0.

Action: Use a <kw>([ref]) or <kw>([ptr]) pointer instead or specify the extended standard option on the compiler command.

0x13283140 NIDL_NOPORTVARY

Severity: Varies **Component:** idl

Text: Warning: Use of varying minor array dimension requires %1\$s

Explanation: An array that is varying in a minor dimension, i.e. other than the first dimension, is not portable to all implementations of DCE V1.0.

Action: Use an array that is varying in only the first dimension, or specify the extended standard option on the compiler command.

0x13283026 NIDL_NOSEMCHECK

Severity: Varies **Component:** idl

Text: Warning: Semantic checking prevented by other reported errors

Explanation: One or more of the reported errors prevented the compiler from completing the semantic checking of the interface. This can cause some semantic errors in the interface to go unreported.

Action: Correct the reported errors and compile the interface again.

0x132830b2 NIDL_NYSALIGN

Severity: Varies **Component:** idl

Text: The [align] attribute is not yet supported

Explanation: None

Action: None

0x132830b3 NIDL_NYSINSHAPE

Severity: Varies **Component:** idl

Text: The attribute [in(shape)] is not yet supported

Explanation: None

Action: None

0x132830b4 NIDL_NYSNONZEROLB

Severity: Varies **Component:** idl

Text: Arrays with a nonzero lower bound are not yet supported

Explanation: None

Action: None

0x132830b5 NIDL_NYSOUTSHAPE

Severity: Varies **Component:** idl

Text: The attribute [out(shape)] is not yet supported

Explanation: None

Action: None

0x132830b6 NIDL_NYSUNIQUE

Severity: Varies **Component:** idl

Text: Attribute [unique] is not yet supported

Explanation: None

Action: None

0x13283027 NIDL_OLDUUID

Severity: Varies **Component:** idl

Text: Warning: Old UUID format must be replaced with new format:

Explanation: The UUID specified in the interface attribute list is in an old format.

Action: Although the old format is compatible with the new format, we recommend that you switch to the new format. If the input is an NCS Version 1 NIDL source file, process it with the translator utility (the <kw>(nidl_to_idl) command) that converts an NCS Version 1 NIDL source file into the format expected by the IDL compiler. You can also use the <kw>(uuidgen) command to convert the old format UUID to the new format. When you have the new format for the UUID, compile the translated source file.

0x132830b7 NIDL_OPCODEATTR

Severity: Varies **Component:** idl

Text: Operation attributes [code] and [nocode] cannot occur together

Explanation: The <kw>([code]) and <kw>([nocode]) attributes have directly opposite meanings. Do not use both.

Action: Remove one of the conflicting attributes.

0x132830b8 NIDL_OPENREAD

Severity: Varies **Component:** idl

Text: Unable to open %1\$s for read access

Explanation: The IDL compiler is unable to open a file for processing.

Action: Make sure the file exists, and that it has the proper access protection for the IDL compiler.

0x132830b9 NIDL_OPENWRITE

Severity: Varies **Component:** idl

Text: Unable to open %1\$s for write access

Explanation: The IDL compiler is unable to create a file.

Action: Make sure the directory to contain the file exists, and that it has the proper access protection for the IDL compiler.

0x1328314f NIDL_OPINCSCHAR

Severity: Varies **Component:** idl

Text: Operation with [in] [cs_char] data requires [cs_stag] parameter

Explanation: If any <kw>([in]) parameter, or part of an <kw>([in]) parameter, has a <kw>([cs_char]) type, there must be a parameter in the same operation to which <kw>([cs_stag]) is applied.

Action: Make sure the ACF declaration for the operation has the <kw>([cs_stag]) attribute applied to one of the parameters in the operation.

0x1328314c NIDL_OPNOTAGS

Severity: Varies **Component:** idl

Text: Warning: Operation with [cs_tag_rtn] contains no codeset tag parameters

Explanation: The <kw>([cs_tag_rtn]) attribute normally appears on an operation only if it has least one parameter with a <kw>([cs_stag]), <kw>([cs_drtag]), or <kw>([cs_rtag]) attribute.

Action: Make sure the ACF declaration for the operation has one or more of the above tags applied to parameter(s) in the operation.

0x132830ba NIDL_OPNOTDEF

Severity: Varies **Component:** idl

Text: Operation name %1\$s referenced in ACF is not defined

Explanation: Any operation referenced in an Attribute Configuration File (ACF) must be defined in the corresponding IDL file.

Action: Check for typographical errors in either file.

0x13283150 NIDL_OPOUTCCHAR

Severity: Varies **Component:** idl

Text: Operation with [out] [cs_char] data requires [cs_rtag] parameter

Explanation: If any <kw>([out]) parameter, or part of an <kw>([out]) parameter, has a <kw>([cs_char]) type, there must be a parameter in the same operation to which <kw>([cs_rtag]) is applied.

Action: Make sure the ACF declaration for the operation has the <kw>([cs_rtag]) attribute applied to one of the parameters in the operation.

0x13283143 NIDL_OPREFDELIN

Severity: Varies **Component:** idl

Text: Warning: Operation with [reflect_deletions] has no [in] or [in,out] full pointers

Explanation: Reflection of node deletions from server to client is only applicable to operations that have <kw>([in]) or <kw>([in,out]) full (<kw>([ptr])) pointers. The <kw>([reflect_deletions]) attribute thus has no effect on the indicated operation.

Action: Remove the <kw>([reflect_deletions]) attribute from the operation to avoid this warning message.

0x132830bf NIDL_OPRESPIPE

Severity: Varies **Component:** idl

Text: An operation result cannot be a pipe

Explanation: Pipes are not allowed as operation results.

Action: Change the operation so the <kw>(pipe) is an extra <kw>([out]) parameter instead of the operation result.

0x1328300d NIDL_OPTIONSTABLE

Severity: Varies **Component:** idl

Text: Options table:

Explanation: Caption for options table printed in usage message

Action: None. This is an informational message.

0x13283115 NIDL_OPTNOVAL

Severity: Varies **Component:** idl

Text: Command option %1\$s does not take a value

Explanation: You specified a value with a command line option that does not take a value.

Action: If the value is meant to be the source file, it must be separated from the command option with a space.

0x132830bb NIDL_OUTCFMTARR

Severity: Varies **Component:** idl

Text: An [out] conformant array must be a top-level parameter or under a non-[ref] pointer

Explanation: An array with unspecified lower and/or upper bounds requires size information. If the array is a top-level parameter, the size information must be in additional <kw>([in]) parameters. If the array is contained within a structure, the size information must be in additional fields of the structure, and the parameter containing the structure must be <kw>([in]) or <kw>([in,out]). In both cases, the size information must be <kw>([in]) so the server stub knows how much storage to allocate for the array. The exception to this latter case is any <kw>([out]) conformant array that is pointed to by a full <kw>([ptr]) pointer or a <kw>([unique]) pointer or that indirectly lies under a <kw>([ptr]) or <kw>([unique]) pointer. In this case the semantics are that the user-written manager code either allocates and/or manages the storage for the array and any other data below the <kw>([ptr]) or <kw>([unique]) pointer or returns a <kw>(NULL) value for the <kw>([ptr]) or <kw>([unique]) pointer.

Action: Change the parameter to be <kw>([in,out]), or pass the array as a separate <kw>([out]) parameter with <kw>([in]) size information parameters, or change the data structure and the code that manipulates it so the conformant array is under a <kw>([ptr]) or <kw>([unique]) pointer.

0x13283028 NIDL_OUTDIRIGN

Severity: Varies **Component:** idl

Text: Warning: Object file for %1\$s placed in current working directory

Explanation: A command option specifies a directory other than the current working directory in which to place a generated C source and object file. The IDL compiler does not place the file in the requested directory if you use the <kw>(-cc_cmd) argument on the command line. Also, the IDL compiler does not place the file in the requested directory on systems on which the mechanism it usually uses for the placement does not work.

Action: IDL provides a command option that allows you to pass command options to the C compiler. Use the appropriate C compiler option to assure that the object files are placed in the correct directory.

0x13283116 NIDL_OUTOFMEM

Severity: Varies **Component:** idl

Text: Out of memory

Explanation: The system-defined limit of memory available to the compiler was exceeded.

Action: Either have the system-defined limit of memory raised, or simplify the source file being compiled by breaking it into multiple modules or eliminating unnecessary imports.

0x132830bc NIDL_OUTPRMREF

Severity: Varies **Component:** idl

Text: Output parameters must be passed by reference

Explanation: Parameters with the <kw>([out]) or <kw>([in,out]) attributes must be passed by reference, so the changed value of the parameter can be reflected back to the caller.

Action: Add a <kw>(*) to the parameter declaration to indicate pass-by-reference calling mechanism.

0x132830bd NIDL_OUTPTRPRM

Severity: Varies **Component:** idl

Text: An [out,ptr] parameter is not valid

Explanation: The <kw>([ptr]) parameter attribute implies that the value of the pointer may be <kw>(NULL). It is invalid on an <kw>([out]) only parameter, since the possible NULL-ness is not shipped to the server (for example, in the <kw>([in]) direction).

Action: If the pointer cannot be <kw>(NULL) remove the <kw>([ptr]) attribute. Otherwise, make the parameter an <kw>([in,out,ptr]) parameter.

0x132830c0 NIDL_OUTSTAR

Severity: Varies **Component:** idl

Text: Output parameters require an explicit top-level *

Explanation: Parameters with the <kw>([out]) or <kw>([in,out]) attributes must be passed by reference, so the changed value of the parameter can be reflected back to the caller. IDL does not allow a <kw>(*) in a type definition to serve as a passing mechanism <kw>(*).

Action: Change the declaration of the parameter so it contains an explicit <kw>(*).

0x132830c1 NIDL_OUTUNIQRPM

Severity: Varies **Component:** idl

Text: An [out,unique] parameter is not valid

Explanation: The <kw>([unique]) parameter attribute implies that the value of the pointer may be <kw>(NULL). The <kw>(NULL) value is invalid on an <kw>([out]) only parameter, since the <kw>(NULL) value was not sent to the server as an <kw>([in]) parameter.

Action: If the pointer cannot be <kw>(NULL), remove the <kw>([unique]) attribute. Otherwise, make the parameter an <kw>([in,out,unique]) parameter.

0x132830be NIDL_OUTUNIQUE

Severity: Varies **Component:** idl

Text: An [out] parameter or operation result cannot contain [unique] pointers

Explanation: Operation results and parameters that are <kw>([out]) only cannot have <kw>([unique]) pointers. Unique pointers may be <kw>(NULL), but there is

no way to express the <kw>(NULL) value to the server unless the pointer is part of an <kw>([in]) parameter.

Action: Change your type declarations so no types contained in the parameter have the <kw>([unique]) attribute, or, if the pointer is part of a parameter, add the <kw>([in]) attribute to the parameter.

0x132830c2 NIDL_PIPEBASETYP

Severity: Varies **Component:** idl

Text: The base type of a pipe cannot be a pipe type

Explanation: A <kw>(pipe) type cannot be used in the definition of another <kw>(pipe) type.

Action: Remove the invalid declaration, or change it so the base type of the <kw>(pipe) is not another <kw>(pipe) type.

0x13283159 NIDL_PIPECTYPE

Severity: Varies **Component:** idl

Text: The base type of a pipe cannot be or contain a [%1\$s] type

Explanation: The indicated attribute cannot be applied to the base type of a pipe, or a type used in constructing the base type of a pipe.

Action: Do not use the indicated attribute with pipes.

0x132830c3 NIDL_PIPESTRFLD

Severity: Varies **Component:** idl

Text: Pipes are not valid as structure fields

Explanation: Pipes are not allowed as fields of structures.

Action: Pass a <kw>(pipe) as a separate parameter to an operation, rather than embedding it as a field of a structure.

0x132830c4 NIDL_PIPEUNIMEM

Severity: Varies **Component:** idl

Text: Pipes are not valid as members of unions

Explanation: Pipes are not allowed as members of <kw>(union)s.

Action: Pass a <kw>(pipe) as a separate parameter to an operation, rather than embedding it as a member of a <kw>(union).

0x132830c5 NIDL_PIPEXMITAS

Severity: Varies **Component:** idl

Text: A pipe cannot have a [transmit_as] type

Explanation: A pipe is a specialized object handled by RPC that, by itself, is not a transmittable object. Thus, a <kw>([transmit_as]) clause is invalid on a <kw>(pipe) definition.

Action: Remove the <kw>([transmit_as]) attribute.

0x132830c6 NIDL_PRMBYREF

Severity: Varies **Component:** idl

Text: A parameter with [%1\$s] cannot be passed by value

Explanation: The <v>([attribute-name]) attribute can only be applied to a parameter if that parameter has an explicit <kw>(*).

Action: Modify the parameter signature to have a top-level <kw>(*).

0x13283162 NIDL_PRMDPATR

Severity: Varies **Component:** idl

Text: A [%1\$s] parameter must have the [%2\$s] attribute

Explanation: A parameter with the first attribute must also have the second attribute.

Action: Add the second attribute to the parameter declaration.

0x132830c7 NIDL_PRMINOROUT

Severity: Varies **Component:** idl

Text: A parameter must have either or both the [in] and [out] attributes

Explanation: The direction of a parameter must be declared. The <kw>([in]) attribute tells IDL that the parameter is passed from client to server. The <kw>([out]) attribute tells IDL that the parameter is passed from server to client.

Action: Add the <kw>([in]), <kw>([out]), or <kw>([in,out]) attribute to the parameter.

0x132830c8 NIDL_PRMLINEATTR

Severity: Varies **Component:** idl

Text: Parameter attributes [in_line] and [out_of_line] cannot occur together

Explanation: None

Action: None

0x132830c9 NIDL_PRMNOTDEF

Severity: Varies **Component:** idl

Text: Parameter name %1\$s referenced in ACF operation %2\$s is not defined

Explanation: Any parameter referenced within an operation declaration in an Attribute Configuration File (ACF) must be defined in the corresponding operation definition in the IDL file.

Action: Check for typographical errors in either file.

0x1328300e NIDL_PROCESSACF

Severity: Varies **Component:** idl

Text: Processing attribute configuration file %1\$s

Explanation: None

Action: None

0x13283168 NIDL_PTRATTBIGN

Severity: Varies **Component:** idl

Text: Warning: Pointer attributes are ignored on an interface reference

Explanation: Interface references are not managed in the same way as other pointers and references in IDL. Thus, the pointer attributes <kw>([ref]), <kw>([unique]), and <kw>([ptr]) are not meaningful on an interface reference.

Action: No action is required, since the pointer attribute is ignored and the IDL compiler continues processing. To eliminate the warning message, remove the pointer attribute from the declaration.

0x132830ca NIDL_PTRATTRHAN

Severity: Varies **Component:** idl

Text: The attribute [ptr] is invalid on a binding handle parameter

Explanation: The first parameter in an operation is a <kw>(handle) parameter, either of type <kw>(handle_t) or a type with the <kw>([handle]) attribute. It cannot have the <kw>([ptr]) attribute, since it cannot be <kw>(NULL).

Action: Remove the <kw>([ptr]) attribute from the parameter.

0x132830cb NIDL_PTRATTRPTR

Severity: Varies **Component:** idl

Text: The attribute [ptr] is valid only for pointer types or array parameter types

Explanation: The <kw>([ptr]) attribute modifies the default behavior of any pointer type or an array parameter data type. It is not valid on other data types. Note that a <kw>(void *) object is not considered a pointer.

Action: There may be a missing <kw>(*) in your declaration. If not, remove the <kw>([ptr]) attribute.

0x132830cc NIDL_PTRBASETYP

Severity: Varies **Component:** idl

Text: The base type of a pipe cannot be or contain a pointer

Explanation: IDL does not allow the base type of a <kw>(pipe) to be a pointer or any data type that contains pointers.

Action: Change your <kw>(pipe) type definition so the base type of the <kw>(pipe) is not a pointer and does not contain any pointers.

0x132830cd NIDL_PTRCFMTARR

Severity: Varies **Component:** idl

Text: Incorrect syntax for pointer to conformant array

Explanation: An IDL declaration attempts to use mixed pointer <kw>(*) and array <kw>([]) syntax to declare a pointer to an array that has bounds that are not fixed. It is ambiguous whether size attributes apply to the pointer or the array, thus IDL does not allow mixing pointer and array syntax when size attributes are present.

Action: If the declaration is a parameter declaration and the top-level <kw>(*) is a pointer to an array, that <kw>(*) is unnecessary. This is because arrays are implicitly passed by reference, as in C. Remove the top-level <kw>(*). If the declaration is a field of a structure, change the declaration to use arrayified pointer syntax. A field that is a pointer to a type and also has a conformant array attribute represents a pointer to an array of that type. If the declaration is an [out] parameter, see the description of the message \"An [out] conformant array must be a top-level parameter or under a full pointer.\"

0x132830ce NIDL_PTRCTXHAN

Severity: Varies **Component:** idl

Text: Full pointers to context handles are not allowed

Explanation: IDL does not allow full pointers to context handles.

Action: If the declaration has the <kw>([ptr]) attribute, either explicitly or by default, change it to a <kw>([ref]) pointer. However, if the declaration is an operation result, it cannot be a <kw>([ref]) pointer and an operation resulting in a pointer to a context handle is not possible.

0x13283129 NIDL_PTRNEUNION

Severity: Varies **Component:** idl

Text: Cannot have more than one level of indirection to a nonencapsulated union

Explanation: IDL allows only a single level of pointer to a nonencapsulated union type.

Action: Remove the extra levels of indirection, or use an encapsulated union type instead.

0x132830cf NIDL_PTRPIPE

Severity: Varies **Component:** idl

Text: The attribute [ptr] is not valid on pipe parameters

Explanation: IDL does not allow the <kw>([ptr]) attribute on <kw>(pipe) parameters.

Action: Remove the <kw>([ptr]) attribute from the parameter.

0x132830d0 NIDL_PTRV1ENUM

Severity: Varies **Component:** idl

Text: Pointers to [v1_enum] types are not allowed

Explanation: An enumeration type with the <kw>([v1_enum]) attribute follows NCS Version 1 NIDL semantics, and does not allow pointers to enumerations except as a reference passing mechanism on a parameter.

Action: If compatibility with NCS Version 1 NIDL is not necessary, remove the <kw>([v1_enum]) attribute.

0x132830d1 NIDL_PTRVARYARR

Severity: Varies **Component:** idl

Text: Pointers to varying arrays are not allowed

Explanation: An IDL declaration attempts to use mixed pointer <kw>(*) and array <kw>([]) syntax to declare a pointer to an array that has varying bounds. Usually, it is ambiguous whether size attributes apply to the pointer or the array, thus IDL does not allow mixing pointer and array syntax when size attributes are present.

Action: If the declaration is a parameter declaration and the top-level <kw>(*) is a pointer to an array, that <kw>(*) is unnecessary. This is because arrays are implicitly passed by reference, as in C. Remove the top-level <kw>(*). If the declaration is more complex, investigate alternative ways to achieve results, such as using a pointer to a structure that has the required information.

0x132830d2 NIDL_PTRVOIDCTX

Severity: Varies **Component:** idl

Text: void * must be used in conjunction with the [context_handle] attribute

Explanation: The only valid use of a <kw>(void *) data type in an interface definition is on an item with the <kw>([context_handle]) attribute.

Action: Change the data type in the declaration, or add the <kw>([context_handle]) attribute.

0x132830d3 NIDL_REFATTRPTR

Severity: Varies **Component:** idl

Text: The attribute [ref] is valid only for pointer types or array parameter types

Explanation: The <kw>([ref]) attribute modifies the default behavior of any pointer type or an array parameter data type. It is not valid on other data types. Note that a <kw>(void *) object is not considered a pointer.

Action: There may be a missing <kw>(*) in your declaration. If not, remove the <kw>([ref]) attribute.

0x132830d4 NIDL_REFFUNRES

Severity: Varies **Component:** idl

Text: A [ref] function result is not valid

Explanation: Unlike <kw>([out]) parameters, there is never any pre-existing storage in the caller for pointer valued function results. The pointer always indicates new storage. This is the capability provided by full pointers only, not <kw>([ref]) pointers.

Action: Remove the <kw>([ref]) attribute from the type definition of the data type of the function result.

0x13283029 NIDL_REFUNIQUE

Severity: Varies **Component:** idl

Text: Warning: The attribute [%1\$s] applied on type with [%2\$s] set, [%3\$s] assumed

Explanation: None

Action: None

0x132830d5 NIDL_RENAMEFAILED

Severity: Varies **Component:** idl

Text: Rename of %1\$s to %2\$s failed

Explanation: The call to rename <v>(filename1) to <v>(filename2) returned a failing status.

Action: Make sure the filenames and paths are valid, you have privilege to perform the rename operation, and there is enough free space on the destination device.

0x132830d6 NIDL_REPASNEST

Severity: Varies **Component:** idl

Text: Types with [represent_as] cannot be nested

Explanation: IDL does not allow a data type that has a <kw>([represent_as]) type to itself be used as a <kw>([represent_as]) type in another type definition.

Action: Do not nest <kw>([represent_as]) types.

0x1328302c NIDL_REQCMDOPT

Severity: Varies **Component:** idl

Text: %1\$s requires the %2\$s command line option

Explanation: There are particular options and constructs that are extensions to the language, these require a particular commandline option.

Action: Add the required option to the command line

0x1328300f NIDL_RUNCPP

Severity: Varies **Component:** idl

Text: Running C preprocessor %1\$s

Explanation: None

Action: None

0x132830d7 NIDL_SCOPELVLS

Severity: Varies **Component:** idl

Text: Too many scoping levels

Explanation: The input source is too complicated to be parsed. This occurs because of deeply nested <kw>(struct) or <kw>(union) declarations.

Action: Simplify the input source by using <kw>(typedef)s to represent the nested <kw>(struct) or <kw>(union) declarations, and building the more complicated <kw>(struct) or <kw>(union) declarations by referencing the named types instead of in-line specification of the <kw>(struct) or <kw>(union) declaration.

0x132830d8 NIDL_SIZEARRTYPE

Severity: Varies **Component:** idl

Text: Size attributes can only be applied to array types

Explanation: Array bound attributes are only valid when used on array types or pointers used as an array.

Action: Remove the array bound attribute or correct the type to be an array.

0x132830d9 NIDL_SIZECFMTYPE

Severity: Varies **Component:** idl

Text: The attribute [size_is] cannot be applied to dimension %1\$lu; upper bound is not dynamic

Explanation: A <kw>(size_is) variable is only valid for array dimensions that have an upper bound that is not fixed.

Action: If the array is multidimensional, you may have specified the <kw>(size_is) variable for the wrong dimension. See the documentation for the proper syntax. If the array has only one dimension, the <kw>(size_is) clause is invalid, since the array's upper data limit is fixed. You may have meant to use a <kw>([length_is]) clause. See the documentation for the distinctions between conformant and varying arrays and their attributes.

0x132830da NIDL_SIZEINATTR

Severity: Varies **Component:** idl

Text: A [size_is] parameter must have the [in] attribute

Explanation: The <kw>([size_is]) attribute specifies a parameter that contains size information of a conformant array. This must be an <kw>([in]) attribute so the server stub code knows how much space to allocate for the array.

Action: Change the size parameter referenced by the <kw>([size_is]) clause to have the <kw>([in]) attribute.

0x132830db NIDL_SIZEMISMATCH

Severity: Varies **Component:** idl

Text: The size attributes do not match the array dimension

Explanation: There are too many attribute references for the number of dimensions defined for the array.

Action: Modify the array bound attribute, specifying one reference for each dimension of the array.

0x132830dc NIDL_SIZEPRMPTR

Severity: Varies **Component:** idl

Text: The array size attribute variable %1\$s cannot have the [ptr] or [unique] attributes

Explanation: An array size attribute clause in the source IDL specifies its value by dereferencing a pointer parameter. This is invalid if the pointer variable has either of the <kw>([ptr]) or <kw>([unique]) attributes, since both allow the pointer to be <kw>(NULL). If the pointer is <kw>(NULL), there is no way to determine the size of the array.

Action: Either redeclare the size variable as a scalar rather than a pointer, or change the size variable to a <kw>([ref]) pointer.

0x132830dd NIDL_SIZETYPEINT

Severity: Varies **Component:** idl

Text: A [size_is] variable must be a small, short, or long integer

Explanation: The <kw>([size_is]) attribute specifies a field or parameter that contains size information of a conformant array. Array bounds, and thus array size, must be integers which are not <kw>(hyper).

Action: Change the size information field or parameter referenced by the <kw>([size_is]) clause to be of integer data type.

0x132830de NIDL_SIZEVARREPAS

Severity: Varies **Component:** idl

Text: A size attribute variable must not have a represent_as type

Explanation: The parameter or field referenced in a <kw>([max_is]), <kw>([size_is]), <kw>([first_is]), <kw>([last_is]), or <kw>([length_is]) clause must not be of a data type that is declared to have a <kw>([represent_as]) type.

Action: Change either the referenced parameter or field data type, or the data type definition itself. The parameter or field referenced in a <kw>([min_is]), <kw>([max_is]), <kw>([size_is]), <kw>([first_is]), <kw>([last_is]), or <kw>([length_is]) clause must not be of a data type that is declared to have a <kw>([represent_as]) type. Change either the referenced parameter or field data type, or the data type definition itself.

0x132830df NIDL_SIZEVARXMITAS

Severity: Varies **Component:** idl

Text: A size attribute variable must not have a transmit_as type

Explanation: The parameter or field referenced in a <kw>([max_is]), <kw>([size_is]), <kw>([first_is]), <kw>([last_is]), or <kw>([length_is]) clause must not be of a data type that is declared to have a <kw>([transmit_as]) type.

Action: Change either the referenced parameter or field data type, or the data type definition itself. The parameter or field referenced in a <kw>([min_is]), <kw>([max_is]), <kw>([size_is]), <kw>([first_is]), <kw>([last_is]), or <kw>([length_is]) clause must not be of a data type that is declared to have a <kw>([transmit_as]) type. Change either the referenced parameter or field data type, or the data type definition itself.

0x132830e0 NIDL_SMALLARRSYN

Severity: Varies **Component:** idl

Text: The attribute [v1_array] must be in array, not pointer, syntax

Explanation: The <kw>([v1_array]) attribute is for compatibility with NCS Version 1 arrays. NCS Version 1 NIDL did not allow pointers to represent arrays.

Action: Define the array using array syntax.

0x132830e1 NIDL_SMALLCFMT

Severity: Varies **Component:** idl

Text: A conformant [v1_array] must also be varying

Explanation: An array with the <kw>([v1_array]) attribute that has a conformant upper bound that is not fixed must also be varying (it must have a <kw>([last_is]) or <kw>([length_is]) attribute in addition to the <kw>([max_is]) or <kw>([size_is]) attribute).

Action: If compatibility with NCS Version 1 NIDL is not necessary, remove the <kw>([v1_array]) attribute. Otherwise, add a <kw>([last_is]) or <kw>([length_is]) attribute to the declaration.

0x132830e2 NIDL_SMALLINV

Severity: Varies **Component:** idl

Text: The attribute [v1_array] is invalid for an array with more than 65535 elements

Explanation: An array with the <kw>([v1_array]) attribute is limited to a total of 65535 or fewer elements. The declared array has too many elements to be <kw>([v1_array]).

Action: Remove the <kw>([v1_array]) attribute from the array declaration.

0x132830e3 NIDL_SMALLMINFIRST

Severity: Varies **Component:** idl

Text: The attribute [v1_array] cannot occur with the [min_is] or [first_is] attributes

Explanation: The only valid array attributes for the <kw>([v1_array]) attribute are <kw>([max_is]), <kw>([last_is]), and <kw>([length_is]).

Action: If you require compatibility with NCS Version 1 NIDL, the lower bound of the array must be fixed; therefore, remove the <kw>([first_is]) attribute and change the array declaration. Otherwise, remove the <kw>([v1_array]) attribute. The only valid array attributes for the <kw>([v1_array]) attribute are <kw>([max_is]), <kw>([size_is]), <kw>([last_is]), and <kw>([length_is]). If you require compatibility with NCS Version 1 NIDL, the lower bound of the array must be fixed; therefore, remove the <kw>([min_is]) or <kw>([first_is]) attribute and change the array declaration. Otherwise, remove the <kw>([v1_array]) attribute.

0x132830e4 NIDL_SMALLMULTID

Severity: Varies **Component:** idl

Text: A [v1_array] can be conformant or varying in first dimension only

Explanation: An array with the <kw>([v1_array]) attribute is limited to a conformant or varying upper data limit in the first dimension only.

Action: Remove the <kw>([v1_array]) attribute from the array declaration.

0x132830e5 NIDL_SMALLOPENLB

Severity: Varies **Component:** idl

Text: A [v1_array] cannot have a conformant lower bound

Explanation: A <kw>([v1_array]) specifies that the array be handled in a manner compatible with NCS Version 1 NIDL, which did not support non-fixed lower bounds for arrays.

Action: If compatibility with NCS Version 1 is required, the array must not have a conformant lower bound. Otherwise, remove the <kw>([v1_array]) attribute.

0x13283117 NIDL_SRCFILELEN

Severity: Varies **Component:** idl

Text: Length of source filename and stub suffix exceed 8 chars

Explanation: None

Action: None

0x13283118 NIDL_SRCFILEREQ

Severity: Varies **Component:** idl

Text: A source IDL filename is required

Explanation: The command line does not contain a source IDL file to compile.

Action: You must specify a source IDL file. You may have erroneously specified the source IDL file when actually you gave a value to a command option.

0x1328302a NIDL_SRVNOCODE

Severity: Varies **Component:** idl

Text: Warning: The attribute [nocode] does not apply to server stub

Explanation: A server for an interface must support all of the routines in that interface, therefore, the <kw>([nocode]) ACF attribute is not valid when you use IDL to generate only server stub code.

Action: This is a warning, so no action is required. If you want to remove the warning message, create a new ACF for the interface that does not use the <kw>([nocode]) attribute. Or change the command line used so stub generation is not limited to the server stub.

0x13283169 NIDL_STATICIGN

Severity: Varies **Component:** idl

Text: Warning: Static property or ACF attribute [cxx_static] is ignored except for -lang cxx

Explanation: The IDL <kw>(static) keyword on an operation, as well as the ACF <kw>([cxx_static]) attribute on an operation, only pertain to interfaces that are compiled with the <kw>(-lang cxx) IDL compiler option.

Action: If your application code is written in C++, then you must use the <kw>(-lang cxx) option to the IDL compiler in order to enable generation of C++ header file and stub files. Otherwise, no action is required, since the static property is ignored, and the IDL compiler continues processing. To eliminate the warning message, remove the static property from the declaration.

0x132830e6 NIDL_STRARRAY

Severity: Varies **Component:** idl

Text: Arrays of strings are not allowed

Explanation: None

Action: None

0x132830e7 NIDL_STRARRAYV1

Severity: Varies **Component:** idl

Text: The attribute [string] cannot be applied to a [v1_array]

Explanation: A string that is compatible with the NCS Version 1 NIDL <kw>(string0) data type must have the <kw>([v1_array]) and <kw>([v1_string]) attributes. The <kw>([string]) attribute only applies without the <kw>([v1_array]) attribute. A <kw>([v1_array]) is for compatibility with NCS Version 1 NIDL.

Action: If compatibility with NCS Version 1 NIDL is required, place the <kw>([v1_string]) attribute on the declaration. Otherwise, remove the <kw>([v1_array]) attribute from the array declaration.

0x132830e8 NIDL_STRCHARBYTE

Severity: Varies **Component:** idl

Text: The attribute [string] is valid only for one-dimensional array of valid base type

Explanation: The <kw>([string]) attribute flags that an array is a string. Strings must be arrays whose base type is one of the following: char, byte, unsigned short, unsigned long, or a structure whose fields are all scalar byte fields.

Action: Remove the `<kw>([string])` attribute, or change the data type so it is a valid string.

0x132830e9 NIDL_STRUCTXMITCFMT

Severity: Varies **Component:** idl

Text: Structures with `[transmit_as]` or `[represent_as]` cannot be conformant

Explanation: IDL does not support a conformant structure with the `<kw>([transmit_as])` or `<kw>([represent_as])` attribute.

Action: Either change the declaration so the structure fields are of a fixed size and have none of the conformant array attributes `<kw>([max_is])` or `<kw>([size_is])`, or remove the `<kw>([transmit_as])` or `<kw>([represent_as])` attribute. IDL does not support a conformant structure with the `<kw>([transmit_as])` or `<kw>([represent_as])` attribute. Either change the declaration so the structure fields are of a fixed size and have none of the conformant array attributes `<kw>([min_is])`, `<kw>([max_is])`, or `<kw>([size_is])`, or remove the `<kw>([transmit_as])` or `<kw>([represent_as])` attribute.

0x132830ea NIDL_STRUNTERM

Severity: Varies **Component:** idl

Text: Unterminated string literal

Explanation: There is a missing closing double quote (`<kw>(")`) on the string literal.

Action: Make sure the the closing quote for the string literal is on the same source line as the starting quote. Also verify that any double quote characters internal to the string are preceded by the escape character (`<literal>(\)`).

0x132830eb NIDL_STRV1ARRAY

Severity: Varies **Component:** idl

Text: The `[v1_string]` attribute can only be applied to a `[v1_array]`

Explanation: A `<kw>([v1_string])` is compatible with the NCS Version 1 NIDL `<kw>(string0)` data type. It can be applied only to an array compatible with NCS Version 1. For example, an array with the `<kw>([v1_array])` attribute.

Action: If compatibility with NCS Version 1 NIDL is required, place the `<kw>([v1_array])` attribute on the array. Otherwise, change the `<kw>([v1_string])` attribute to `<kw>([string])`, that is a generalization of `<kw>([v1_string])`.

0x132830ec NIDL_STRV1FIXED

Severity: Varies **Component:** idl

Text: A [v1_string] must be an array of char with fixed bounds

Explanation: A <kw>([v1_string]) is compatible with the NCS Version 1 NIDL <kw>(string0) data type. It must be a single dimensioned array of <kw>(char) with a zero lower bound and a fixed upper bound.

Action: If compatibility with NCS Version 1 NIDL is required, change the declaration accordingly. Otherwise, see the documentation regarding the <kw>([string]) attribute.

0x132830ed NIDL_STRVARY

Severity: Varies **Component:** idl

Text: A [string] array cannot have varying array attributes

Explanation: The <kw>([string]) attribute says that the length of a string is an intrinsic property of the string itself; for example, C strings are zero-terminated.

Action: Remove any <kw>([first_is]), <kw>([last_is]), or <kw>([length_is]) clauses from the string declaration.

0x132830ee NIDL_STSATTRONCE

Severity: Varies **Component:** idl

Text: The attribute [%1\$s] can occur at most once per operation

Explanation: A <kw>([comm_status]) or <kw>([fault_status]) parameter or operation result is used to return an error code if a certain type of error occurs during execution of an operation. Do not use either attribute more than once per operation.

Action: Remove the redundant usages of the attribute from the interface's Attribute Configuration File (ACF).

0x132830ef NIDL_STSPRMOUT

Severity: Varies **Component:** idl

Text: A parameter with [%1\$s] must be an [out] parameter

Explanation: A <kw>([comm_status]) or <kw>([fault_status]) parameter is used to return an error code if a certain type of error occurs during execution of an operation. Thus, it must be an <kw>([out]) parameter.

Action: Place the <kw>([out]) attribute on the parameter.

0x132830f0 NIDL_STSRETVAL

Severity: Varies **Component:** idl

Text: An operation with [%1\$s] must return a value of type error_status_t

Explanation: The <kw>([comm_status]) or <kw>([fault_status]) attribute on an operation signifies that the return value of the operation is used to return an error code if a certain type of error occurs during execution of an operation. Thus, the operation must be declared to deliver a result of data type <kw>(error_status_t).

Action: Declare the operation result to be of data type <kw>(error_status_t).

0x132830f1 NIDL_STSVARTYPE

Severity: Varies **Component:** idl

Text: A parameter with [%1\$s] must be of type error_status_t

Explanation: A <kw>([comm_status]) or <kw>([fault_status]) parameter or function result is used to return an error code if a certain type of error occurs during execution of an operation. The data type of the variable must be <kw>(error_status_t).

Action: Declare the variable to be of data type <kw>(error_status_t).

0x13283010 NIDL_STUBCOMPILE

Severity: Varies **Component:** idl

Text: Compiling stub module %1\$s

Explanation: None

Action: None

0x13283011 NIDL_STUBCREATE

Severity: Varies **Component:** idl

Text: Creating stub module %1\$s

Explanation: None

Action: None

0x13283012 NIDL_STUBDELETE

Severity: Varies **Component:** idl

Text: Deleting stub module %1\$s

Explanation: None

Action: None

0x1328312a NIDL_SWATTRNEU

Severity: Varies **Component:** idl

Text: A [switch_is] attribute is only valid on a nonencapsulated union

Explanation: A <kw>([switch_is]) attribute is used on a union type to identify the union discriminator variable. It is not valid on a non-union type. It is also not valid on an encapsulated union type, where the union discriminator variable is encapsulated as a field within the union type.

Action: Use the <kw>([switch_is]) attribute only on instances of nonencapsulated union types.

0x1328312b NIDL_SWDATATYPE

Severity: Varies **Component:** idl

Text: Data type of [switch_is] variable %1\$s does not agree with [switch_type] %2\$s

Explanation: The data type of the variable referenced in the <kw>([switch_is]) clause must be the same as the data type referenced in the <kw>([switch_type]) clause of the item's type definition.

Action: Make sure that all instances of a type that has the <kw>([switch_type]) attribute have a <kw>([switch_is]) clause whose data type agrees with the <kw>([switch_type]).

0x1328312c NIDL_SWTYPENEU

Severity: Varies **Component:** idl

Text: A [switch_type] attribute is only valid on a nonencapsulated union type

Explanation: A <kw>([switch_type]) attribute is used on a union type to identify the union discriminator type. It is not valid on a non-union type. It is also not valid on an encapsulated union type, where the union discriminator type and variable must be specified in a <kw>(switch) clause.

Action: Use the <kw>([switch_type]) attribute only on definitions of nonencapsulated union types.

0x132830f2 NIDL_SYNTAXERR

Severity: Varies **Component:** idl

Text: Syntax error

Explanation: The source input is incorrect and no interpretation can be made.

Action: Examine the source input on and near the source listed and correct any errors.

0x132830f3 NIDL_SYNTAXNEAR

Severity: Varies **Component:** idl

Text: Syntax error near \"%2\$.*1\$s\"

Explanation: The source input is incorrect and no interpretation can be made for <v>(source-text).

Action: Examine the source input on and near the source listed and correct any errors.

0x132830f4 NIDL_SYNTAXUUID

Severity: Varies **Component:** idl

Text: Syntax error in UUID format

Explanation: The UUID specified in the <kw>([uuid]) attribute of an interface is not in a valid format.

Action: Make sure the UUID is transcribed correctly and contains the required punctuation.

0x132830f5 NIDL_SYSERRMSG

Severity: Varies **Component:** idl

Text: System error message: %1\$s

Explanation: Identifies the cause of the previous error.

Action: See the system documentation for an explanation of the error message.

0x1328302b NIDL_SYSIDLNAME

Severity: Varies **Component:** idl

Text: Warning: File %1\$s is a system-defined IDL filename

Explanation: The file <v>(filename) has the same name as an RPC-supplied system IDL file. This can cause unexpected compilation errors, such as missing declarations of IDL predefined types.

Action: Rename <v>(filename) so it does not conflict with any of the system-defined IDL filenames.

0x13283157 NIDL_TAGAFTDATA

Severity: Varies **Component:** idl

Text: A [cs_rtag] parameter must precede any [out] [cs_char] data in a parameter list

Explanation: A <kw>([cs_rtag]) parameter must occur in an operation's parameter list before any [out] parameters containing types with the [cs_char] ACF attribute.

Action: Re-order the parameters to meet this requirement.

0x13283156 NIDL_TAGBEFDATA

Severity: Varies **Component:** idl

Text: A [cs_stag] parameter must precede any [in] [cs_char] data in a parameter list

Explanation: A <kw>([cs_stag]) parameter must occur in an operation's parameter list before any [in] parameters containing types with the [cs_char] ACF attribute.

Action: Re-order the parameters to meet this requirement.

0x1328315e NIDL_TAGPRMTYPE

Severity: Varies **Component:** idl

Text: Tag parameters must have type unsigned long int passed by value or reference

Explanation: Parameters to which tag attributes (<kw>([cs_stag]), <kw>([cs_drtag]), or <kw>([cs_rtag])) are attached must be either <v>(unsigned long) integer values or <v>(unsigned long) integers passed by reference.

Action: Change the parameter types as required.

0x132830f6 NIDL_TOOMANYELEM

Severity: Varies **Component:** idl

Text: Too many elements in %1\$s

Explanation: The <kw>(enum) <v>(item) contains more than 32767 elements.

Action: Reduce the number of elements included in the <kw>(enum).

0x132830f7 NIDL_TOOMANYPORT

Severity: Varies **Component:** idl

Text: Too many endpoint specifications; Maximum is %1\$lu

Explanation: There are more endpoint specifications than IDL can process.

Action: Remove some of the endpoint specifications listed in the <kw>([endpoint]) attribute. Specify at most <v>(number) endpoint specifications for an interface.

0x1328313d NIDL_TYPEATTRUSE

Severity: Varies **Component:** idl

Text: Type with [%1\$s] cannot be used in definition of type with [%2\$s]

Explanation: IDL restricts the use of the two attributes such that the base type of a type that has the first attribute must not contain the second attribute in its definition.

Action: Refer to the IDL documentation on the two attributes for more information.

0x1328315c NIDL_TYPECTYPE

Severity: Varies **Component:** idl

Text: Type with [%1\$s] cannot be or contain type with [%2\$s]

Explanation: A type with the first attribute cannot also have the second attribute, nor can it contain any type which has the second attribute.

Action: The two features cannot interact on a single type. Consider alternate ways to achieve the desired result.

0x1328314d NIDL_TYPENEST

Severity: Varies **Component:** idl

Text: Types with the [%1\$s] attribute cannot be nested

Explanation: A type with the indicated attribute cannot include another type with the same attribute.

Action: Do not nest types with the attribute.

0x132830f8 NIDL_TYPENOTFND

Severity: Varies **Component:** idl

Text: Type name: %1\$s not found

Explanation: The type <v>(name) is not declared at this point in the interface declaration.

Action: Correct the spelling of <v>(name) if incorrect, and make sure that a definition of <v>(name) precedes the reference.

0x1328315d NIDL_TYPEOFBYTES

Severity: Varies **Component:** idl

Text: Type with [%1\$s] must resolve to byte or structure containing only byte fields

Explanation: A type with the indicated attribute must be defined as an IDL type that resolves to byte or to a structure type in which all of the fields have types which resolve to byte.

Action: Change the type definition, or remove the attribute if it is not needed.

0x13283013 NIDL_TYPEREPAS

Severity: Varies **Component:** idl

Text: Type %1\$s has a represent_as data type %2\$s

Explanation: IDL does not allow a data type that has a <kw>([represent_as]) type to itself be used as a <kw>([represent_as]) type in another type definition.

Action: The message gives information to help you locate the problem.

0x1328312e NIDL_TYPEREPCFMT

Severity: Varies **Component:** idl

Text: A type with the [represent_as] attribute cannot be conformant

Explanation: IDL does not allow a conformant network type to have a local represented type.

Action: Use a valid IDL construct.

0x132830f9 NIDL_TYPLINEATTR

Severity: Varies **Component:** idl

Text: Type attributes [in_line] and [out_of_line] cannot occur together

Explanation: The <kw>([in_line]) and <kw>([out_of_line]) attributes are opposite in meaning. You can specify at most one of these attributes on a type.

Action: Remove one of the conflicting attributes.

0x132830fa NIDL_TYPNOTDEF

Severity: Varies **Component:** idl

Text: Type name %1\$s referenced in ACF is not defined

Explanation: The context in which a type name is used in the Attribute Configuration File (ACF) requires that the type be defined in the corresponding IDL file.

Action: See if the referenced type is defined in some other interface. If so, the ACF reference belongs in the ACF for that interface. Check for typographical errors in both the IDL and ACF files. Check that you have not omitted a type definition in the IDL file.

0x132830fd NIDL_UNBALBRACES

Severity: Varies **Component:** idl

Text: Unbalanced braces

Explanation: The number of left braces and right braces are not equal.

Action: Make sure the number of left braces equals the number of right braces and that each brace is in the correct place.

0x132830fc NIDL_UNBALBRACKETS

Severity: Varies **Component:** idl

Text: Unbalanced brackets

Explanation: The number of left brackets and right brackets are not equal.

Action: Make sure the number of left brackets equals the number of right brackets and that each bracket is in the correct place.

0x132830fb NIDL_UNBALPARENS

Severity: Varies **Component:** idl

Text: Unbalanced parentheses

Explanation: The number of left parentheses and right parentheses are not equal.

Action: Make sure the number of left parentheses equals the number of right parentheses and that each parenthesis is in the correct place.

0x132830fe NIDL_UNIDISCTYP

Severity: Varies **Component:** idl

Text: A union discriminator type must be small, short, long, char, boolean, or enum

Explanation: The discriminator of a <kw>(union), that determines which case of the <kw>(union) is used, is restricted to integer, character, enumeration, and boolean data types. Also, <kw>(hyper int) discriminators are not allowed.

Action: Change the discriminator to one of the valid data types. Make sure the data type of the <kw>(constant) values in the <kw>(case) clauses within the <kw>(union) agree with the discriminator data type.

0x132830ff NIDL_UNIQATTRHAN

Severity: Varies **Component:** idl

Text: The attribute [unique] is invalid on a binding handle parameter

Explanation: The first parameter in an operation is a <kw>(handle) parameter, which is either of type <kw>(handle_t) or a type with the <kw>([handle]) attribute. A binding handle parameter cannot have the <kw>([unique]) attribute because it cannot be <kw>(NULL).

Action: Remove the <kw>([unique]) attribute from the parameter.

0x13283100 NIDL_UNIQATTRPTR

Severity: Varies **Component:** idl

Text: The attribute [unique] is valid only for pointer types or array parameter types

Explanation: The <kw>([unique]) attribute modifies the default behavior of any pointer type or an array parameter data type. It is not valid on other data types. Note that a <kw>(void *) object is not considered a pointer.

Action: There may be a missing asterisk (<kw>(*)) in your declaration. If not, remove the <kw>([unique]) attribute.

0x13283101 NIDL_UNIQCTXHAN

Severity: Varies **Component:** idl

Text: [unique] pointers to context handles are not allowed

Explanation: IDL does not allow <kw>([unique]) pointers to context handles.

Action: If the declaration has the <kw>([unique]) attribute, either explicitly or by default, change it to a <kw>([ref]) pointer. However, if the declaration is an operation result, it cannot be a <kw>([ref]) pointer and an operation resulting in a pointer to a context handle is not valid.

0x13283102 NIDL_UNIQFUNRES

Severity: Varies **Component:** idl

Text: A [unique] function result is not valid

Explanation: Unlike <kw>([out]) parameters, there is never any preexisting storage in the caller for pointer-valued function results. The pointer always points to new storage. This is the capability provided only by full pointers, not by <kw>([unique]) pointers.

Action: Remove the <kw>([unique]) attribute from the type definition of the data type for the function result.

0x13283119 NIDL_UNKFLAG

Severity: Varies **Component:** idl

Text: Unknown command line option: %1\$s

Explanation: You entered an invalid command line option.

Action: Check the command line for typographical errors. See the documentation for proper command line syntax.

0x13283103 NIDL_UNKNOWNATTR

Severity: Varies **Component:** idl

Text: Unknown attribute [%1\$s]

Explanation: The attribute specified is not a valid IDL attribute.

Action: Check for spelling errors or misplaced syntax.

0x13283014 NIDL_USAGE

Severity: Varies **Component:** idl

Text: Usage: idl filename [options]

Explanation: Lists the format of the <kw>(idl) command that invokes the IDL compiler.

Action: Use the <kw>(-confirm) option to see a list of all to determine those you need.

0x13283104 NIDL_USETRANS

Severity: Varies **Component:** idl

Text: Obsolete feature encountered; Use translator

Explanation: A feature of NCS Version 1 NIDL was encountered that is not supported in the IDL compiler. You may be compiling an NCS Version 1 NIDL source file.

Action: If the input is a NCS Version 1 NIDL source file, process it with the translator utility (the <kw>(nidl_to_idl) command) that converts an NCS Version 1 NIDL source file into the format expected by the IDL compiler. Then compile the translated source file. Otherwise, remove the reference to the obsolete feature.

0x13283105 NIDL_UUIDINV

Severity: Varies **Component:** idl

Text: The attribute [uuid] is invalid when the [local] attribute is specified

Explanation: The <kw>([local]) interface attribute flags that an interface is not for RPC use, but is only a local header generation mechanism. The <kw>([uuid]) attribute is only used for RPC interfaces.

Action: Remove one of the conflicting attributes.

0x13283106 NIDL_VARDECLNOSUP

Severity: Varies **Component:** idl

Text: Variable declarations are not supported; declaration of %1\$s ignored

Explanation: IDL does not support the declaration of variables. The types of data that can be declared in IDL are; constants, types, and functions. The declaration of <v>(variable) is not a function and is incorrect.

Action: If intended as a function declaration, correct the declaration so the top-level declaration is a function. Otherwise, remove the declaration.

0x13283015 NIDL_VERSION

Severity: Varies **Component:** idl

Text: DCE IDL compiler version %1\$s

Explanation: Identifies the current version of the IDL compiler.

Action: Use this version number when submitting bug reports.

0x13283107 NIDL_VOIDOPPTR

Severity: Varies **Component:** idl

Text: void is valid only in an operation or a context handle pointer declaration

Explanation: The <kw>(void) keyword is only valid as the return value of an operation, or as part of a <kw>(void *) declaration. Note also that in RPC interfaces, <kw>(void *) is only valid if the <kw>([context_handle]) attribute is also specified on the data item.

Action: There may be a missing <kw>(*) in your declaration. If not, change the <kw>(void) reference to some valid data type.

0x13283108 NIDL_XMITASREP

Severity: Varies **Component:** idl

Text: A type used in a [transmit_as] clause cannot have a [represent_as] type

Explanation: The type used in a <kw>([transmit_as]) clause specifies an alternative type that a base IDL type is translated to or from and before or after transmission over the network. The type used in a <kw>([represent_as]) clause is an alternative type that a base IDL type is translated from or to at the application code-to-stub code interface. Going from base IDL type to transmittable type and then to a <kw>([represent_as]) type (that may not be transmittable) is invalid.

Action: You may have meant to put a <kw>([represent_as]) clause on the base IDL type, not its transmittable type.

0x13283109 NIDL_XMITCFMTARR

Severity: Varies **Component:** idl

Text: A [transmit_as] or [represent_as] type cannot be a conformant array

Explanation: A type specified in a <kw>([transmit_as]) clause or a type with the <kw>([transmit_as]) or <kw>([represent_as]) attribute cannot be a conformant array, since there is nowhere to attach the size information attribute that is needed to transmit the data.

Action: Define a structure that contains a conformant array and a size information field instead of using a conformant array directly.

0x13283155 NIDL_XMITCTYPE

Severity: Varies **Component:** idl

Text: A [transmit_as] transmitted type cannot contain a [%1\$s] type

Explanation: The indicated attribute cannot be applied to any type which is used as the transmitted type used in a <kw>([transmit_as]) attribute or any type which is used in the definition of the transmitted type used in a <kw>([transmit_as]) attribute.

Action: Do not use the attribute on the transmitted type specified in the <v>([transmit_as(transmitted_type)]) attribute or any other type that is contained within that transmitted type.

0x1328310a NIDL_XMITPIPEBASE

Severity: Varies **Component:** idl

Text: The base type of a pipe cannot be a [transmit_as] type

Explanation: IDL does not allow the base type of a <kw>(pipe) to have the <kw>([transmit_as]) attribute.

Action: Declare the base type of the <kw>(pipe) to be the data type in the <kw>([transmit_as]) clause.

0x1328310b NIDL_XMITPTR

Severity: Varies **Component:** idl

Text: A translated transmittable type cannot contain [%1\$s] pointers

Explanation: A transmittable type that is derived by calling a translation routine, for example, a <kw>(from_local) translation of a <kw>([represent_as]) type or a <kw>(to_xmit) translation of a <kw>([transmit_as]) type, cannot contain pointers of the indicated type.

Action: Define a transmittable type that does not contain invalid pointers. If using <kw>([represent_as]), reconsider using it.

0x1328310c NIDL_XMITTYPEATTRS

Severity: Varies **Component:** idl

Text: A type with [transmit_as] cannot have other type attributes

Explanation: A data type with the <kw>([transmit_as]) attribute (the presented type) has an associated transmittable type, and you must write routines to convert the presented type to or from the transmittable type. Only the transmittable type is relevant to the RPC mechanism, thus it is incorrect for the presented type to have additional RPC-specific attributes.

Action: Remove any type attributes other than <kw>([transmit_as]).

———— OM_FUNCTION_DECLINED

Severity: Error **Component:** Directory Services

Text: ————

Explanation: An attempt was made to apply a function to an object, but the function does not apply to the object.

Action: None required.

——- **OM_FUNCTION_INTERRUPTED**

Severity: Error **Component:** Directory Services

Text: _____

Explanation: The function was aborted by an external force; for example, a keystroke designated for this purpose at a user interface.

Action: If desired, retry the operation.

——- **OM_MEMORY_INSUFFICIENT**

Severity: Error **Component:** Directory Services

Text: _____

Explanation: The service could not allocate the main memory it needs to complete the function.

Action: Acquire more memory before retrying the operation.

——- **OM_NETWORK_ERROR**

Severity: Error **Component:** Directory Services

Text: _____

Explanation: The service attempted to employ the network upon which its implementation depends, but was unable to do so.

Action: Wait until the network is available and retry the operation.

——- **OM_NO_SUCH_CLASS**

Severity: Error **Component:** Directory Services

Text: _____

Explanation: A purported class identifier was not defined.

Action: This error is returned for the following functions:

- **om_copy()**
- **om_create()**
- **om_delete()**
- **om_instance()**

- **om_put()**

Ensure that the class identifier is correctly defined in the header files.

—— OM_NO_SUCH_EXCLUSION

Severity: Error **Component:** Directory Services

Text: _____

Explanation: A purported exclusion identifier was not defined.

Action: This error is returned by the **om_get()** function. Ensure that you have defined all exclusion identifiers.

—— OM_NO_SUCH_MODIFICATION

Severity: Error **Component:** Directory Services

Text: _____

Explanation: A purported modification identifier was not defined.

Action: This error is returned by the **om_put()** function. Ensure that you have defined all modification identifiers.

—— OM_NO_SUCH_OBJECT

Severity: Error **Component:** Directory Services

Text: _____

Explanation: A purported object is nonexistent, or the purported handle is invalid.

Action: Ensure that you have indicated the correct object or a valid handle for the desired object.

—— OM_NO_SUCH_SYNTAX

Severity: Error **Component:** Directory Services

Text: _____

Explanation: The purported syntax identifier is not defined.

Action: Ensure that the syntax identifier is defined.

——— OM_NO_SUCH_TYPE

Severity: Error **Component:** Directory Services

Text: _____

Explanation: The purported type identifier is not defined.

Action: Ensure that the type identifier is defined.

——— OM_NO_SUCH_WORKSPACE

Severity: Error **Component:** Directory Services

Text: _____

Explanation: A purported workspace is nonexistent.

Action: This error is returned by the **om_copy()** and the **om_create()** functions. The original or specified class must be in a package associated with the workspace.

——— OM_NOT_CONCRETE

Severity: Error **Component:** Directory Services

Text: _____

Explanation: The class was abstract, not concrete.

Action: This error is returned by **om_create()** and **om_put()**. The specified class needs to be concrete.

——— OM_NOT_PRESENT

Severity: Error **Component:** Directory Services

Text: _____

Explanation: An attribute value was missing.

Action: Ensure that all required attributes are included.

——— OM_NOT_PRIVATE

Severity: Error **Component:** Directory Services

Text: _____

Explanation: The object named is a public object.

Action: You must name a private object.

——— **OM_NOT_THE_SERVICES**

Severity: Error **Component:** Directory Services

Text: _____

Explanation: An object was client-generated, rather than a service-generated or private object.

Action: This error is returned by **om_delete()** or **om_get()**. The **om_delete()** function operates on a service-generated public object or makes a private object inaccessible. The **om_get()** function makes an exact, but independent copy of an existing private object, thus you must name a private object.

——— **OM_PERMANENT_ERROR**

Severity: Error **Component:** Directory Services

Text: _____

Explanation: The service encountered a permanent difficulty other than those indicated by other return codes.

Action: Wait and retry the operation.

——— **OM_POINTER_INVALID**

Severity: Error **Component:** Directory Services

Text: _____

Explanation: In the C interface, an invalid pointer was supplied as a function argument, or as the receptacle for a function result.

Action: Correct the pointer and retry the operation.

——— **OM_SYSTEM_ERROR**

Severity: Error **Component:** Directory Services

Text: _____

Explanation: The service could not successfully employ the operating system upon which its implementation depends.

Action: Wait until the operating system is available and retry the operation.

——— OM_TEMPORARY_ERROR

Severity: Error **Component:** Directory Services

Text: _____

Explanation: The service encountered a temporary difficulty other than those indicated by other return codes.

Action: Wait and retry the operation.

——— OM_TOO_MANY_VALUES

Severity: Error **Component:** Directory Services

Text: _____

Explanation: An implementation limit prevents a further attribute value from being added to an object. This limit is undefined.

Action: Simplify the object, if possible, and retry.

——— OM_VALUES_NOT_ADJACENT

Severity: Error **Component:** Directory Services

Text: _____

Explanation: The descriptors for the values of a particular attribute are not adjacent.

Action: This error is returned by **om_put()**. Ensure that the descriptors for the values of a particular attribute with two or more values are adjacent to one another in the sequence.

——— OM_WRONG_VALUE_LENGTH

Severity: Error **Component:** Directory Services

Text: _____

Explanation: This error is returned by **om_copy_value()**, **om_put()**, and **om_write()**. An attribute has, or would have, a value that violates a constraint on the value syntax.

Action: Check the value length for the attribute and correct the length accordingly.

—— OM_WRONG_VALUE_MAKEUP

Severity: Error **Component:** Directory Services

Text: _____

Explanation: This error is returned by **om_put()** and **om_write()**. An attribute has, or would have, a value that violates a constraint on the value syntax.

Action: Ensure that the value and the the value syntax are acceptable.

—— OM_WRONG_VALUE_NUMBER

Severity: Error **Component:** Directory Services

Text: _____

Explanation: This error is returned by **om_put()**. An attribute has, or would have, a value that violates the value number constraints in force.

Action: Ensure that you have not included more values than acceptable for the attribute.

—— OM_WRONG_VALUE_POSITION

Severity: Error **Component:** Directory Services

Text: _____

Explanation: This error is returned by **om_put()** and **om_write()**. The use defined for the value position in the argument or arguments of a function is invalid.

Action: This error is returned by **om_put()** and **om_write()**. Correct the position of the value within the attribute to conform with the defined position for the value.

—— OM_WRONG_VALUE_SYNTAX

Severity: Error **Component:** Directory Services

Text: _____

Explanation: An attribute has, or would have, a value whose syntax is not permitted.

Action: Correct the syntax for the value.

—— OM_WRONG_VALUE_TYPE

Severity: Error **Component:** Directory Services

Text: _____

Explanation: This error is returned by **om_copy_value()**, **om_get()**, and **om_put()**.
An object has, or would have, an attribute whose type is not permitted.

Action: Correct the attribute type.

0x15f5202b pkc_s_alg_already_registered

Severity: Varies **Component:** pkc

Text: The algorithm has already been registered

Explanation: An implementation of the specified algorithm is already registered.

Action: Either use the existing implementation or over-ride it by specifying PKC_REPLACE_ALL.

0x15f5202a pkc_s_alg_deleted

Severity: Varies **Component:** pkc

Text: The algorithm has been deleted

Explanation: The specified algorithm has been deleted.

Action: Use a different algorithm.

0x15f5200c pkc_s_asn_bad_indefinite

Severity: Varies **Component:** pkc

Text: Bad indefinite-length value.

Explanation: An indefinite-length value was invalid, or not allowed for the type..

Action: Check that the BER you are trying to read is correct.

0x15f52006 pkc_s_asn_bad_param

Severity: Varies **Component:** pkc

Text: Bad Parameter.

Explanation: A parameter value was invalid.

Action: Check the parameters you pass.

0x15f52001 pkc_s_asn_internal_error

Severity: Varies **Component:** pkc

Text: Internal error.

Explanation: An error handler was invoked due to an internal error.

Action: Submit a problem report.

0x15f5200e pkc_s_asn_invalid_value

Severity: Varies **Component:** pkc

Text: Invalid value.

Explanation: The encoding is not valid for the value type.

Action: Correct the BER.

0x15f5200a pkc_s_asn_inv_length

Severity: Varies **Component:** pkc

Text: Invalid length.

Explanation: A length indicator contained an invalid value.

Action: Check that the BER you are trying to read is correct.

0x15f52005 pkc_s_asn_inv_type

Severity: Varies **Component:** pkc

Text: Invalid type.

Explanation: A type indicator denoted the wrong type.

Action: Check that the value you are trying to read is correct.

0x15f5200b pkc_s_asn_inv_value

Severity: Varies **Component:** pkc

Text: Invalid value.

Explanation: A value field contained invalid data.

Action: Check that the BER you are trying to read is correct.

0x15f52002 pkc_s_asn_no_default_value

Severity: Varies **Component:** pkc

Text: No default available.

Explanation: A request was made for the default encoding of an object with no default value.

Action: Submit a problem report.

0x15f52009 pkc_s_asn_no_more_data

Severity: Varies **Component:** pkc

Text: No more data.

Explanation: There is no more data to read.

Action: Application-specific.

0x15f5200f pkc_s_asn_not_supported

Severity: Varies **Component:** pkc

Text: Construct not supported.

Explanation: The BER construct is not supported.

Action: Check that the BER you are trying to read is correct.

0x15f52003 pkc_s_asn_out_of_range

Severity: Varies **Component:** pkc

Text: A value was out of range.

Explanation: An attempt was made to read a value into an object that is too small to contain it.

Action: Submit a problem report.

0x15f52011 pkc_s_asn_unexpected_call

Severity: Varies **Component:** pkc

Text: Unexpected invocation.

Explanation: The routine was invoked unexpectedly.

Action: Submit a problem report.

0x15f52004 pkc_s_asn_unset

Severity: Varies **Component:** pkc

Text: Value unset.

Explanation: An attempt was made to encode an unset value.

Action: Ensure that all values are set before invoking the encode member.

0x15f52010 pkc_s_asn_value_already_set

Severity: Varies **Component:** pkc

Text: Value already set.

Explanation: The value is already set.

Action: A CHOICE value has already been defined.

0x15f5200d pkc_s_asn_value_overflow

Severity: Varies **Component:** pkc

Text: Value overflow.

Explanation: A value being parsed caused an overflow.

Action: Check the BER; Use an object with larger capacity.

0x15f52008 pkc_s_asn_wrong_type

Severity: Varies **Component:** pkc

Text: Invalid type.

Explanation: A type indicator denoted the wrong type.

Action: Check that the value you are trying to read is correct.

0x15f52026 pkc_s_bad_attribute

Severity: Varies **Component:** pkc

Text: Internal error - the wrong attribute was returned.

Explanation: An error occurred while trying to read a certificate

Action: Submit a problem report.

0x15f52028 pkc_s_bad_certificate_handle

Severity: Varies **Component:** pkc

Text: The certificate-handle was invalid

Explanation: The certificate-handle failed consistency checks

Action: Acquire a new certificate-handle, or submit a problem report.

0x15f52040 pkc_s_bad_param

Severity: Varies **Component:** pkc

Text: Bad Parameter.

Explanation: A parameter value was invalid.

Action: Check the parameters you pass.

0x15f52029 pkc_s_bad_time

Severity: Varies **Component:** pkc

Text: Bad time

Explanation: A time value was invalid

Action: Try a different value.

0x15f52025 pkc_s_bad_value

Severity: Varies **Component:** pkc

Text: The value was invalid.

Explanation: An error occurred while trying to parse a value

Action: Ensure the value syntax is correct.

0x15f52048 pkc_s_cant_create_mutex

Severity: Error **Component:** pkc/pkc_s_locks

Text: Can't create mutex

Explanation: An error occurred while trying to create a mutex.

Action: Increase process quotas and re-try the operation.

0x15f52049 pkc_s_cant_delete_mutex

Severity: Error **Component:** pkc/pkc_s_locks

Text: Can't delete mutex

Explanation: An error occurred while trying to delete a mutex. This is an internal error

Action: Attempt to delete a locked mutex. File a problem report.

0x15f5204a pkc_s_cant_lock_mutex

Severity: Error **Component:** pkc/pkc_s_locks

Text: Can't lock mutex

Explanation: An error occurred while trying to lock a mutex. This is an internal error

Action: Can't lock a mutex. File a problem report.

0x15f5204b pkc_s_cant_unlock_mutex

Severity: Error **Component:** pkc/pkc_s_locks

Text: Can't unlock mutex

Explanation: An error occurred while trying to unlock a mutex. This is an internal error

Action: Can't unlock a mutex. File a problem report.

0x15f5203c pkc_s_certificate_not_revoked

Severity: Varies **Component:** pkc

Text: The certificate has not been revoked.

Explanation: The certificate has not been revoked.

Action: None - this is an informational status.

0x15f5203d pkc_s_certificate_revoked

Severity: Varies **Component:** pkc

Text: The certificate has been revoked.

Explanation: The certificate has been revoked.

Action: None - this is an informational status.

0x15f5203a pkc_s_cert_invalid_algid

Severity: Varies **Component:** pkc

Text: The certificate is invalid - signature algorithm mismatch.

Explanation: The two signatureAlgorithm fields within the certificate differ.

Action: Retry with a valid certificate.

0x15f5203b pkc_s_cert_not_added

Severity: Varies **Component:** pkc

Text: The certificate was not added as it could not be verified.

Explanation: Trust could not be established in the certificate, so it will not be added.

Action: Application-dependent

0x15f52038 pkc_s_cert_not_verified_signature

Severity: Varies **Component:** pkc

Text: The certificate could not be verified. The signature was wrong.

Explanation: The provided public-key did not match the certificate signature.

Action: Either consider the certificate unverifiable or try another key.

0x15f52037 pkc_s_cert_not_verified_validity

Severity: Varies **Component:** pkc

Text: The certificate could not be verified. Key validity mismatch

Explanation: The validity period of the chosen key did not overlap that of the certificate.

Action: Either consider the certificate unverifiable or retry the operation, specifying a different key.

0x15f5202f pkc_s_conversion_error

Severity: Varies **Component:** pkc

Text: Conversion failed.

Explanation: An error was detected while converting between XDS and XDS++

Action: None.

0x15f5204c pkc_s_delete_not_pending

Severity: Error **Component:** pkc/pkc_s_locks

Text: Locking violation - Delete not pending

Explanation: An internal error occurred in the locking protocol.

Action: Internal error - delete not pending. File a problem report.

0x15f5201b pkc_s_delete_pending

Severity: Varies **Component:** pkc

Text: Delete pending

Explanation: Delete pending.

Action: None. This is an informational status.

0x15f52027 pkc_s_failure

Severity: Varies **Component:** pkc

Text: Non-specific failure.

Explanation: The operation failed

Action: Determine the cause of failure.

0x15f52021 pkc_s_forbidden

Severity: Varies **Component:** pkc

Text: Key not found; lookup forbidden.

Explanation: The requested key may not be retrieved.

Action: Try another key.

0x15f5203e pkc_s_index_out_of_range

Severity: Varies **Component:** pkc

Text: Index out of range

Explanation: The requested key with given index could not be retrieved.

Action: Try another key.

0x15f5204d pkc_s_init_cant_create_mutexattr

Severity: Error **Component:** pkc/pkc_s_locks

Text: Initialization error - Can't create mutex attributes

Explanation: An internal error occurred during module initialization.

Action: Internal error - can't create mutex attributes. File a problem report.

0x15f5204e pkc_s_init_cant_init_mutexattr

Severity: Error **Component:** pkc/pkc_s_locks

Text: Initialization error - Can't initialize mutex attributes

Explanation: An internal error occurred during module initialization.

Action: Internal error - can't initialize mutex attributes. File a problem report.

0x15f5202e pkc_s_init_error

Severity: Varies **Component:** pkc

Text: Initialization failed.

Explanation: The interface could not initialize itself

Action: Retry the operation.

0x15f52050 pkc_s_init_failure_asn

Severity: Error **Component:** pkc/pkc_s_locks

Text: Can't initialize ASN.1 subfacility. Code: %x

Explanation: An internal error occurred during ASN.1 initialization.

Action: Internal error - can't initialize ASN.1 subfacility. File a problem report.

0x15f5204f pkc_s_init_failure_locks

Severity: Error **Component:** pkc/pkc_s_locks

Text: Can't initialize locking subfacility. Code: %x

Explanation: An internal error occurred during lock initialization.

Action: Internal error - can't initialize locking subfacility. File a problem report.

0x15f52051 pkc_s_init_failure_pkc

Severity: Error **Component:** pkc/pkc_s_locks

Text: Can't initialize PKC subfacility. Code: %x

Explanation: An internal error occurred during PKC initialization.

Action: Internal error - can't initialize PKC subfacility. File a problem report.

0x15f5201d pkc_s_initialization_failure

Severity: Varies **Component:** pkc

Text: Initialization failure.

Explanation: An error occurred during module initialization.

Action: Submit a problem-report.

0x15f52031 pkc_s_insufficient_rdns

Severity: Varies **Component:** pkc

Text: The source name had insufficient components to complete the operation

Explanation: An attempt was made to remove more components than are present in the name

Action: Request the removal of fewer components.

0x15f5203f pkc_s_internal_error

Severity: Varies **Component:** pkc

Text: Internal error.

Explanation: An error handler was invoked due to an internal error.

Action: Submit a problem report.

0x15f52018 pkc_s_invalid_handle

Severity: Varies **Component:** pkc

Text: Invalid handle.

Explanation: The handle presented was invalid.

Action: Application-specific.

0x15f52039 pkc_s_invalid_public_key

Severity: Varies **Component:** pkc

Text: The provided public key is invalid.

Explanation: The public-key is corrupt.

Action: Retry with a valid key.

0x15f52015 pkc_s_invalid_version

Severity: Varies **Component:** pkc

Text: Invalid structure version.

Explanation: You passed an unsupported version of a data structure to a library routine.

Action: Re-compile your application against the installed library.

0x15f5201e pkc_s_inv_lock_type

Severity: Varies **Component:** pkc

Text: Invalid lock type.

Explanation: An invalid lock type was requested.

Action: Request lock types of either PKC_READ_LOCK or PKC_WRITE_LOCK.

0x15f52036 pkc_s_key_not_certified

Severity: Varies **Component:** pkc

Text: The key is not certified

Explanation: An attempt was made to retrieve information about the certifier of an uncertified key.

Action: None - this is an informational status.

0x15f52020 pkc_s_key_not_found

Severity: Varies **Component:** pkc

Text: Key not found.

Explanation: The requested key could not be retrieved.

Action: Try another key.

0x15f52035 pkc_s_key_not_trusted

Severity: Varies **Component:** pkc

Text: The key is not trusted

Explanation: An attempt was made to retrieve information about an untrusted key.

Action: Present certificate(s) to establish trust in the key before interrogating it.

0x15f5201a pkc_s_locking_violation

Severity: Varies **Component:** pkc

Text: Locking error.

Explanation: A locking operation unexpectedly failed.

Action: Submit a problem report.

0x15f52007 pkc_s_nomem

Severity: Varies **Component:** pkc

Text: Out of memory.

Explanation: An attempt to allocate heap memory failed.

Action: Check your process quotas.

0x15f52017 pkc_s_no_more_items

Severity: Varies **Component:** pkc

Text: No more items.

Explanation: There are no more items in the sequence.

Action: None. This is a success status.

0x15f5202d pkc_s_no_value

Severity: Varies **Component:** pkc

Text: The requested value does not exist

Explanation: There are no more values to retrieve

Action: None.

0x15f52034 pkc_s_pley_already_registered

Severity: Varies **Component:** pkc

Text: The policy has already been registered

Explanation: An implementation of the specified policy is already registered.

Action: Either use the existing implementation or over-ride it in the re-registration call.

0x15f52033 pkc_s_pley_deleted

Severity: Varies **Component:** pkc

Text: The policy has been deleted

Explanation: The specified policy has been deleted.

Action: Use a different policy.

0x15f52023 pkc_s_policy_close_failure

Severity: Varies **Component:** pkc

Text: The close operation failed.

Explanation: An error occurred while trying to close a policy

Action: Policy-specific.

0x15f52022 pkc_s_policy_open_failure

Severity: Varies **Component:** pkc

Text: The open operation failed.

Explanation: An error occurred while trying to open a policy

Action: Policy-specific.

0x15f52024 pkc_s_policy_retrieve_failure

Severity: Varies **Component:** pkc

Text: The retrieve operation failed.

Explanation: An error occurred while trying to retrieve a key from a policy

Action: Policy-specific.

0x15f5201f pkc_s_policy_unavailable

Severity: Varies **Component:** pkc

Text: No appropriate policy could be found.

Explanation: The requested key retrieval policy is unavailable.

Action: Request a registered policy.

0x15f52016 pkc_s_replaced

Severity: Varies **Component:** pkc

Text: Object replaced.

Explanation: The object just registered replaced a pre-existing object.

Action: None. This is a success status.

0x15f5201c pkc_s_unimplemented

Severity: Varies **Component:** pkc

Text: Unimplemented feature.

Explanation: The feature is unimplemented.

Action: Application-specific.

0x15f52030 pkc_s_unimplemented_syntax

Severity: Varies **Component:** pkc

Text: Unimplemented syntax.

Explanation: The presented object used a value syntax that is not supported

Action: Retry the operation using a different syntax.

0x15f5202c pkc_s_unsupported

Severity: Varies **Component:** pkc

Text: The operation is unsupported

Explanation: The specified operation is unsupported or unimplemented.

Action: Application-specific.

0x15f52019 pkc_s_unsupported_algorithm

Severity: Varies **Component:** pkc

Text: Unsupported algorithm.

Explanation: An implementation of the specified algorithm has not been registered.

Action: Either specify a supported algorithm, or register an implementation of the algorithm and retry the operation..

0x15f52032 pkc_s_unsupported_policy

Severity: Varies **Component:** pkc

Text: Unsupported policy.

Explanation: An implementation of the specified policy has not been registered

Action: Either specify a supported policy, or register a policy implementation

0x15f52014 pkc_s_x500_at_root

Severity: Varies **Component:** pkc

Text: Already at root.

Explanation: You attempted to find the parent of the namespace root.

Action: Application-specific.

0x15f52013 pkc_s_x500_unsupported_attribute

Severity: Varies **Component:** pkc

Text: Unsupported attribute.

Explanation: The X.500 attribute type is not supported.

Action: Use another attribute type.

0x15f52012 pkc_s_x500_unsupported_syntax

Severity: Varies **Component:** pkc

Text: Unsupported syntax.

Explanation: The X.500 value syntax is not supported.

Action: Use an alternate syntax.

0x15f62051 pks_s_acl_not_authorized

Severity: Error **Component:** pks/pks_s_acl

Text: Unauthorized add or modify attempt on user '%s'.

Explanation: Caller attempted add or modify operation without required privileges.

Action: none

0x15f62008 pks_s_already_initialized

Severity: Notice **Component:** pks/pks_s_server

Text: The PKSS has already initialized.

Explanation: An initialization routine was called more than once.

Action: None - this is an informational status.

0x15f6200b pks_s_bad_acl

Severity: Varies **Component:** pks

Text: An error was detected in a retrieved ACL.

Explanation: An ACL did not pass consistency checks.

Action: Check the integrity of the database.

0x15f6200c pks_s_bad_acl_type

Severity: Varies **Component:** pks

Text: The specified ACL type was not recognized.

Explanation: The specified ACL type was not recognized.

Action: Specify a recognized ACL type.

0x15f62024 pks_s_bad_msg_type

Severity: Varies **Component:** pks

Text: Unexpected message type returned from pipe helper.

Explanation: A protocol violation occurred.

Action: Internal error

0x15f62005 pks_s_cant_open_storage_file

Severity: Varies **Component:** pks

Text: Failed to open file associated with pks object

Explanation: When attempting to open a file associated with the pks object, a failure occurred.

Action: Ensure that the **storage_tag** field of the **id** paramater refers to an existing file, and that the file is accessible to the pks process.

0x15f62009 pks_s_cant_remove_storage_file

Severity: Varies **Component:** pks

Text: Failed to remove file belonging to pks object

Explanation: When attempting to remove a file referred to by the pks object, a failure occurred.

Action: Ensure that the **storage_tag** field of the **id** paramater refers to an existing file, and that the file and directory in which it resides is accessible to the pks process.

0x15f62018 pks_s_exec_e2big

Severity: Error **Component:** pks/pks_s_pipe

Text: Exec failed (E2BIG).

Explanation: Exec failed, errno = E2BIG.

Action: Submit a problem report

0x15f62019 pks_s_exec_eaccess

Severity: Error **Component:** pks/pks_s_pipe

Text: Exec failed (EACCESS).

Explanation: Exec failed, errno = EACCESS.

Action: Submit a problem report

0x15f6201a pks_s_exec_eloop

Severity: Error **Component:** pks/pks_s_pipe

Text: Exec failed (ELOOP).

Explanation: Exec failed, errno = ELOOP.

Action: Submit a problem report

0x15f6201b pks_s_exec_enametoolong

Severity: Error **Component:** pks/pks_s_pipe

Text: Exec failed (ENAMETOOLONG).

Explanation: Exec failed, errno = ENAMETOOLONG.

Action: Submit a problem report

0x15f6201c pks_s_exec_enoent

Severity: Error **Component:** pks/pks_s_pipe

Text: Exec failed (ENOENT).

Explanation: Exec failed, errno = ENOENT.

Action: Submit a problem report

0x15f6201f pks_s_exec_enoexec

Severity: Error **Component:** pks/pks_s_pipe

Text: Exec failed (ENOEXEC).

Explanation: Exec failed, errno = ENOEXEC.

Action: Submit a problem report

0x15f6201d pks_s_exec_enomem

Severity: Error **Component:** pks/pks_s_pipe

Text: Exec failed (ENOMEM).

Explanation: Exec failed, errno = ENOMEM.

Action: Submit a problem report

0x15f6201e pks_s_exec_enotdir

Severity: Error **Component:** pks/pks_s_pipe

Text: Exec failed (ENOTDIR).

Explanation: Exec failed, errno = ENOTDIR.

Action: Submit a problem report

0x15f62020 pks_s_exec_fail

Severity: Error **Component:** pks/pks_s_pipe

Text: Exec failed (%d).

Explanation: Exec failed.

Action: Submit a problem report

0x15f62014 pks_s_fork_error

Severity: Error **Component:** pks/pks_s_pipe

Text: Can't create child process.

Explanation: The PKSS split-client can't fork a child

Action: Check process resources

0x15f62016 pks_s_int_length_error

Severity: Varies **Component:** pks

Text: Pipe length error.

Explanation: Error calculating pipe data length.

Action: Submit a problem report

0x15f62017 pks_s_int_length_errorp

Severity: Error **Component:** pks/pks_s_pipe

Text: Pipe length error (%d).

Explanation: Error calculating pipe data length.

Action: Submit a problem report

0x15f62003 pks_s_invalid_arg

Severity: Error **Component:** pks/pks_s_general

Text: Bad or wrong arguments

Explanation: Bad or wrong arguments were supplied.

Action: Reinvoke the command with the correct arguments.

0x15f62004 pks_s_invalid_arg_1_parm

Severity: Error **Component:** pks/pks_s_general

Text: Bad or wrong argument: %d

Explanation: Bad or wrong argument were supplied.

Action: Reinvoke the command with the correct arguments.

0x15f6200d pks_s_invalid_op

Severity: Varies **Component:** pks

Text: The specified authorization operation was unrecognized.

Explanation: Internal error - the specified authorization operation was unrecognized.

Action: Submit a problem report.

0x15f6200a pks_s_no_acl

Severity: Varies **Component:** pks

Text: The ACL was not found.

Explanation: The ACL did not exist within the database.

Action: Application-specific

0x15f62006 pks_s_no_config_file

Severity: Error **Component:** pks/pks_s_server

Text: Inaccessible or absent configuration file.

Explanation: The PKSS configuration file could not be opened.

Action: Check that a valid configuration exists and can be read.

0x15f62002 pks_s_no_gen_reply

Severity: Error **Component:** pks/pks_s_general

Text: Cannot generate a reply message, %x

Explanation: Could not generate ASN.1-encoded reply message

Action: none

0x15f62007 pks_s_no_group_name

Severity: Error **Component:** pks/pks_s_server

Text: Cannot read server group name from config info

Explanation: Cannot read server group name from config info

Action: Check that a valid configuration exists and can be read.

0x15f62001 pks_s_no_memory

Severity: Error **Component:** pks/pks_s_general

Text: Cannot allocate memory

Explanation: Memory allocation operation failed

Action: Check memory limits on your machine, and increase available memory, if possible.

0x15f62023 pks_s_pipclt_bad_msg

Severity: Error **Component:** pks/pks_s_pipe

Text: Unexpected message type returned from pipe helper (%d).

Explanation: A protocol violation occurred.

Action: Internal error

0x15f62022 pks_s_pipeclt_nomem

Severity: Fatal **Component:** pks/pks_s_pipe

Text: Pipe client can't allocate memory (%d).

Explanation: The client can't allocate memory.

Action: Check process resources

0x15f62015 pks_s_pipe_data_error

Severity: Error **Component:** pks/pks_s_pipe

Text: Pipe data error.

Explanation: Error communicating with child process.

Action: Check process resources

0x15f6200f pks_s_pipe_error

Severity: Error **Component:** pks/pks_s_pipe

Text: Can't create pipe.

Explanation: The PKSS split-client can't create a pipe

Action: Check process resources

0x15f62013 pks_s_pipe_svr_decrypt_fail

Severity: Error **Component:** pks/pks_s_pipe

Text: Error decrypting data in server from pipe (%x).

Explanation: Error returned from crypto routine

Action: submit a problem report

0x15f62012 pks_s_pipe_svr_encrypt_fail

Severity: Error **Component:** pks/pks_s_pipe

Text: Error encrypting data in server for pipe (%x).

Explanation: Error returned from crypto routine

Action: Submit a problem report

0x15f62025 pks_s_pipsvr_decode_error

Severity: Error **Component:** pks/pks_s_pipe

Text: Error decoding pipe data.

Explanation: Error decoding pipe data.

Action: Submit a problem report

0x15f62026 pks_s_pipsvr_decode_errorp

Severity: Error **Component:** pks/pks_s_pipe

Text: Error decoding pipe data (%d).

Explanation: Error decoding pipe data.

Action: Submit a problem report

0x15f62021 pks_s_pipsvr_nomem

Severity: Fatal **Component:** pks/pks_s_pipe

Text: Pipe server can't allocate memory (%d).

Explanation: The client-side helper can't allocate memory.

Action: Check process resources

0x15f6202a pks_s_ready_to_listen

Severity: Notice **Component:** pks/pks_s_server

Text: Ready to listen on interfaces...

Explanation: The daemon has started.

Action: None required.

0x15f62027 pks_s_unexpected_termination

Severity: Fatal **Component:** pks/pks_s_pipe

Text: Unexpected child termination, status=**code**.

Explanation: The child process unexpectedly terminated. The status code **code** specifies additional information.

Action: Correct the indicated error and retry the operation.

0x170830df pwd_exp_cl_bad_arg

Severity: Varies **Component:** sad
Text: %s: Unknown command line option %s\n
Explanation: User entered an invalid option
Action: Check passwd_export manual for correct option.

0x170830e2 pwd_exp_cl_bad_entries

Severity: Varies **Component:** sad
Text: %s: User entered an illegal number of requested entries,\n Using the internal maximum (%d entries)for reporting.
Explanation: User entered an invalid value for requested entries, default is used
Action: None required

0x170830e1 pwd_exp_cl_bad_opt_d

Severity: Varies **Component:** sad
Text: %s: Option -d requires argument\n
Explanation: User needs to specify a directory with -d option
Action: Check passwd_export manual for correct argument for -d option.

0x170830e0 pwd_exp_cl_bad_opt_m

Severity: Varies **Component:** sad
Text: %s: Option -m requires argument\n
Explanation: Number of maximum entries should be specified after -m option
Action: Check passwd_export manual for correct command argument.

0x170830de pwd_exp_cl_usage

Severity: Varies **Component:** sad
Text: Usage: %s [-d dirname][-m maxentries][-s][-n][-x][-v] | [-h]\n\n
Explanation: passwd_export started with incorrect arguments

Action: Run passwd_export with correct options and arguments. \n Consult the passwd_export manual page for details.

0x170830eb pwd_exp_env_fail_change_dir

Severity: Varies **Component:** sad

Text: Could not change to directory %s (%s).

Explanation: chdir() system call failed.

Action: Check your permission mode for the directory or the directory exists.

0x170830ec pwd_exp_env_fail_getcwd

Severity: Varies **Component:** sad

Text: Could not get pathname of current directory (%s).

Explanation: getcwd() system call failed.

Action:

0x1708310c pwd_exp_err_no_memory

Severity: Varies **Component:** sad

Text: Cannot allocate requested amount of memory.\n

Explanation: Cannot allocate memory for requested operation.

Action: Check available system swap space and increase if necessary.

0x170830e8 pwd_exp_f_cannot_open_prime_group

Severity: Varies **Component:** sad

Text: Warning: error opening %s for priming group file (%s).

Explanation: When priming the group file to a temporary file, error occurred open the group file.

Action: Check your permission mode for the file.

0x170830e9 pwd_exp_f_cannot_open_temp_group

Severity: Varies **Component:** sad

Text: Could not open temporary group file %s for writing (%s).

Explanation: When priming group file to a temporary file, error occurred open the temporary file.

Action: Check your permission mode for the file.

0x170830ea pwd_exp_f_cannot_open_temp_passwd

Severity: Varies **Component:** sad

Text: Could not %s temporary passwd file %s for writing (%s).

Explanation: Temporary passwd file is used as a lock to ensure there is only one passwd_export process running. If the error indicates the file exists, it may imply that either another passwd_export process is up running or the temporary passwd file was not deleted from last run. For the later case, DCE administrator should delete this file manually.

Action: Check your permission mode for the file.

0x1708310b pwd_exp_no_space

Severity: Varies **Component:** sad

Text: Unable to save passwd database to disk, not enough space.\n

Explanation: Unable to save passwd database to disk.

Action: Ensure that there is adequate disk space.

0x170830e7 pwd_exp_rgy_cannot_close

Severity: Varies **Component:** sad

Text: Can't close connection to registry.

Explanation: Cannot close connection to registry server

Action:

0x170830e6 pwd_exp_rgy_cannot_open

Severity: Varies **Component:** sad

Text: Can't open connection to registry.

Explanation: Cannot connect to registry server

Action:

0x170830e3 pwd_exp_rgy_connect_rejected

Severity: Varies **Component:** sad

Text: Cannot get override information due to server connection rejected.

Explanation: Possible sec_clientd is not available.

Action: Check if sec_clientd is not started, restart it.

0x170830e5 pwd_exp_rgy_error_group

Severity: Varies **Component:** sad

Text: Error occurred while acquiring group entries.

Explanation:

Action:

0x170830e4 pwd_exp_rgy_error_passwd

Severity: Varies **Component:** sad

Text: Error occurred while acquiring passwd entries.

Explanation:

Action:

0x170830ed pwd_imp_cl_usage

Severity: Varies **Component:** sad

Text: Usage: %s [-h] | [-i][-c][-v][-o org][-d dir][-u username] [-p password]\n\n

Explanation: passwd_import started with incorrect arguments

Action: Run passwd_import with correct options and arguments. \n Consult the passwd_import manual page for details.

0x170830f3 pwd_imp_err_add_group_member

Severity: Varies **Component:** sad

Text: Cannot add member: Member \"%s\", Group UNIX id \"%d\" - %s\n

Explanation:

Action:

0x170830f6 pwd_imp_err_add_org_member

Severity: Varies **Component:** sad

Text: Error when adding principal to org \"%s\" - %s\n

Explanation:

Action:

0x170830f2 pwd_imp_err_add_pgo

Severity: Varies **Component:** sad

Text: Error when adding \"%s\" - %s\n

Explanation: Input exceeds internal data storage.

Action:

0x170830f4 pwd_imp_err_add_princ_group

Severity: Varies **Component:** sad

Text: Principal \"%s\", Group \"%d\" - %s\n

Explanation:

Action:

0x170830ef pwd_imp_err_auth

Severity: Varies **Component:** sad

Text: - Authentication failure

Explanation: Calls to check authentication failed.

Action:

0x17083108 pwd_imp_err_bad_ask_y_n

Severity: Varies **Component:** sad

Text: Invalid answer - \"%s\", please answer [yes|no].

Explanation: User typed an invalid answer.

Action:

0x170830f0 pwd_imp_err_bad_name

Severity: Varies **Component:** sad

Text: (Name in question - %s.)\n

Explanation: More information for previous error message

Action:

0x170830c4 pwd_imp_err_cache_e_not_found

Severity: Varies **Component:** sad

Text: Cache entry not found.\n

Explanation: Data not found in cache database.

Action:

0x170830c3 pwd_imp_err_data_too_long

Severity: Varies **Component:** sad

Text: Data is too long for buffer - \"%s\"\n

Explanation: Data length exceeds rgy data storage size.

Action:

0x170830b8 pwd_imp_err_DEL0

Severity: Varies **Component:** sad

Text:

Explanation: MESSAGE NOT REFERENCED, THEREFORE DELETED.

Action: None required

0x170830b9 pwd_imp_err_DEL1

Severity: Varies **Component:** sad

Text:

Explanation: MESSAGE NOT REFERENCED, THEREFORE DELETED.

Action: None required

0x170830c5 pwd_imp_err_dup_name

Severity: Varies **Component:** sad

Text: Name already present in cache, cannot add duplicate entry.\n

Explanation:

Action:

0x170830c6 pwd_imp_err_dup_num

Severity: Varies **Component:** sad

Text: UNIX id already present in cache and entry is not an alias.\n

Explanation: ?

Action: None required

0x170830b3 pwd_imp_err_fatal

Severity: Varies **Component:** sad

Text: Cannot continue after previous error - import operation terminated.

Explanation: Previous error is fatal, has to exit

Action:

0x170830bd pwd_imp_err_gname_exist_match

Severity: Varies **Component:** sad

Text: Group name exists in registry and UNIX ids match.\n

Explanation:

Action:

0x170830be pwd_imp_err_gname_exist_nmatch

Severity: Varies **Component:** sad

Text: Group name exists in registry but UNIX ids don't match.\n

Explanation:

Action:

0x170830b5 pwd_imp_err_gname_too_long

Severity: Varies **Component:** sad

Text: Group name too long.\n

Explanation: Group name length exceeds maximum rgy name length.

Action:

0x170830f7 pwd_imp_err_group_conflict

Severity: Varies **Component:** sad

Text: >>>> The group (%s)exists in the registry with this id.\n

Explanation:

Action:

0x170830c0 pwd_imp_err_guid_exists

Severity: Varies **Component:** sad

Text: Import Group's UNIX id exists in registry.\n

Explanation:

Action:

0x170830f1 pwd_imp_err_input_too_long

Severity: Varies **Component:** sad

Text: Input is too long.\n

Explanation: Input exceeds internal data storage.

Action:

0x170830f5 pwd_imp_err_internal_cache

Severity: Varies **Component:** sad

Text: Internal cache error -

Explanation:

Action:

0x170830ba pwd_imp_err_internal_error

Severity: Varies **Component:** sad

Text: Internal error.\n

Explanation: Unexpected internal error occurs.

Action:

0x170830c1 pwd_imp_err_invalid_option

Severity: Varies **Component:** sad

Text: Invalid option - %s.

Explanation:

Action: Check manual for correct command syntax.

0x170830c2 pwd_imp_err_invalid_uid

Severity: Varies **Component:** sad

Text: Not a valid UNIX id.\n

Explanation:

Action:

0x170830b2 pwd_imp_err_no_grp_access

Severity: Varies **Component:** sad

Text: Unable to access group file %s (%s).

Explanation: This error may be caused by invalid file name or bad permission mode

Action: Validate the file name.

0x170830c7 pwd_imp_err_no_memory

Severity: Varies **Component:** sad

Text: Cannot allocate requested amount of memory.\n

Explanation:

Action:

0x170830b1 pwd_imp_err_no_pwd_access

Severity: Varies **Component:** sad

Text: Unable to access passwd file %s (%s).

Explanation: This error may be caused by invalid file name or bad permission mode

Action: Validate the file name.

0x170830b6 pwd_imp_err_ongame_too_long

Severity: Varies **Component:** sad

Text: Organization name too long.\n

Explanation: Organization name length exceeds maximum rgy name length.

Action:

0x170830ca pwd_imp_err_PAD0

Severity: Varies **Component:** sad

Text: UNUSED MESSAGE, RESERVED FOR FUTURE IMPLEMENTATIONS\n

Explanation: ?

Action: None required

0x170830cb pwd_imp_err_PAD1

Severity: Varies **Component:** sad

Text: UNUSED MESSAGE, RESERVED FOR FUTURE IMPLEMENTATIONS\n

Explanation: ?

Action: None required

0x170830cc **pwd_imp_err_PAD2**

Severity: Varies **Component:** sad

Text: UNUSED MESSAGE, RESERVED FOR FUTURE IMPLEMENTATIONS\n

Explanation: ?

Text: Do you wish to associate the existing group name with this id?

Explanation:

Action:

0x170830ee pwd_imp_rgy_bad_org

Severity: Varies **Component:** sad

Text: Invalid org name - %s

Explanation: <org> enter from -o option is invalid

Action: Make sure <org> specify is a valid name.

0x16c9a167 rpc_m_alloc_fail

Severity: Varies **Component:** rpc

Text: (%s) Memory allocation failed

Explanation: A call to malloc failed to return memory.

Action: Increase available memory and/or swap space.

0x16c9a14a rpc_m_bad_pkt_type

Severity: Varies **Component:** rpc

Text: (%s) Illegal or unknown packet type: %x

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a14f rpc_m_call_failed

Severity: Varies **Component:** rpc

Text: %s failed: %s

Explanation: A call to some internal routine or macro failed.

Action: Report the error to your vendor.

0x16c9a153 rpc_m_call_failed_c

Severity: Varies **Component:** rpc

Text: %s on client failed: %s

Explanation: A call to some internal routine or macro on a client failed.

Action: Report the error to your vendor.

0x16c9a151 rpc_m_call_failed_errno

Severity: Varies **Component:** rpc

Text: %s failed, errno = %d

Explanation: A call to some internal routine or macro failed.

Action: Report the error to your vendor.

0x16c9a150 rpc_m_call_failed_no_status

Severity: Varies **Component:** rpc

Text: %s: call failed

Explanation: A call to some internal routine or macro failed.

Action: Report the error to your vendor.

0x16c9a152 rpc_m_call_failed_s

Severity: Varies **Component:** rpc

Text: %s on server failed: %s

Explanation: A call to some internal routine or macro on a server failed.

Action: Report the error to your vendor.

0x16c9a162 rpc_m_cant_create_uuid

Severity: Varies **Component:** rpc

Text: (%s) Can't create UUID

Explanation: A UUID could not be created, probably because the RPC runtime's UUID generator was unable to get the local system's IEEE 802 address.

Action: Make sure the underlying network transport service is working. Try a non-RPC application that uses this service (for example, file transfer or remote login).

0x16c9a169 rpc_m_cant_open_file

Severity: Varies **Component:** rpc

Text: (%s) Can't open file %s.

Explanation: A file couldn't be opened.

Action: Check the existence and permissions of the named file.

0x16c9a145 rpc_m_cn_ill_state_trans_ca

Severity: Varies **Component:** rpc

Text: Illegal state transition detected in CN client association state machine
[cur_state: %s, cur_event: %s, assoc: %x]

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a147 rpc_m_cn_ill_state_trans_cg

Severity: Varies **Component:** rpc

Text: Illegal state transition detected in CN client association group state machine
[cur_state: %d, cur_event: %d, grp: %x]

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a149 rpc_m_cn_ill_state_trans_cr

Severity: Varies **Component:** rpc

Text: Illegal state transition detected in CN client call state machine [cur_state: %d,
cur_event: %d, call_rep: %x]

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a144 rpc_m_cn_ill_state_trans_sa

Severity: Varies **Component:** rpc

Text: Illegal state transition detected in CN server association state machine
[cur_state: %s, cur_event: %s, assoc: %x]

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a146 rpc_m_cn_ill_state_trans_sg

Severity: Varies **Component:** rpc

Text: Illegal state transition detected in CN server association group state machine
[cur_state: %d, cur_event: %d, grp: %x]

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a148 rpc_m_cn_ill_state_trans_sr

Severity: Varies **Component:** rpc

Text: Illegal state transition detected in CN server call state machine [cur_state: %d, cur_event: %d, call_rep: %x]

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a16d rpc_m_ctxrundown_exc

Severity: Varies **Component:** rpc

Text: Exception in routine at %x, running down context %x of client %x

Explanation: An exception was caught by the runtime while trying to rundown client context.

Action: Fix the context rundown routine to avoid raising the exception, or to **CATCH** it.

0x16c9a16c rpc_m_ctxrundown_nomem

Severity: Varies **Component:** rpc

Text: Out of memory while trying to run down contexts of client %x

Explanation: No memory was available from the operating system.

Action: Increase available memory and/or swap space.

0x16c9a165 rpc_m_dgpkt_bad_free

Severity: Varies **Component:** rpc

Text: (%s) Attempt to free already-freed DG packet

Explanation: An attempt was made to free a DG packet already on the packet pool's free list.

Action: Report the error to your vendor.

0x16c9a164 rpc_m_dgpkt_pool_corrupt

Severity: Varies **Component:** rpc

Text: (%s) DG packet free pool is corrupted

Explanation: The DG protocol's packet free pool is corrupted.

Action: Report the error to your vendor.

0x16c9a154 rpc_m_errmsg_toobig

Severity: Varies **Component:** rpc

Text: (%s) Error message will not fit in packet

Explanation: The sec_krb_cn_build_err_message routine failed.

Action: Report the error to your vendor.

0x16c9a15e rpc_m_eventlist_full

Severity: Varies **Component:** rpc

Text: (%s) Event list full

Explanation: A state machine's event list was full when someone tried to put an event on it.

Action: Report the error to your vendor.

0x16c9a14c rpc_m_frag_toobig

Severity: Varies **Component:** rpc

Text: (receive_packet) assoc->%x frag_length %d in header > fragbuf data size %d

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a157 rpc_m_invalid_accbytcnt

Severity: Varies **Component:** rpc

Text: (%s) Inconsistency in ACC_BYTCNT field

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a161 rpc_m_invalid_seqnum

Severity: Varies **Component:** rpc

Text: (%s) Invalid call sequence number

Explanation: An RPC call structure with an invalid sequence number was allocated/initialized.

Action: Report the error to your vendor.

0x16c9a155 rpc_m_invalid_srchattr

Severity: Varies **Component:** rpc

Text: (%s) Unexpected search attribute seen

Explanation: An unexpected search attribute was seen while looking through a name space entry.

Action: Report the error to your vendor.

0x16c9a166 rpc_m_lookaside_corrupt

Severity: Varies **Component:** rpc

Text: (%s) Lookaside list is corrupted

Explanation: A lookaside buffer (internal data structure) was corrupted.

Action: Report the error to your vendor.

0x16c9a15d rpc_m_no_stub_data

Severity: Varies **Component:** rpc

Text: (%s) No stub data to send

Explanation: No stub data was given to a routine to be sent.

Action: Report the error to your vendor.

0x16c9a156 rpc_m_nts_not_found

Severity: Varies **Component:** rpc

Text: (%s) Negotiated transfer syntax not found in presentation context element

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a158 rpc_m_pre_v2_ifspec

Severity: Varies **Component:** rpc

Text: (%s) Pre-v2 interface spec

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a163 rpc_m_pre_v2_ss

Severity: Varies **Component:** rpc

Text: (%s) Can't handle pre-v2 server stubs

Explanation: A Network Computing System (NCS) client tried to make an RPC to a server that did not link in the NCS compatibility library.

Action: Rebuild the server with the NCS compatibility library, or don't use the old NCS client to access the server.

0x16c9a14b rpc_m_prot_mismatch

Severity: Varies **Component:** rpc

Text: (receive_packet) assoc->%x %s: Protocol version mismatch - major->%x minor->%x

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a168 rpc_m_realloc_fail

Severity: Varies **Component:** rpc

Text: (%s) Memory reallocation failed

Explanation: A call to realloc failed to return memory.

Action: Increase available memory and/or swap space.

0x16c9a15a rpc_m_recvbuf_toosmall

Severity: Varies **Component:** rpc

Text: (%s) Socket's maximum receive buffering is less than NCA Connection Protocol minimum requirement

Explanation: Socket buffering available from the operating system is insufficient to support RPC.

Action: Increase the operating system's maximum socket buffer size.

0x16c9a15b rpc_m_unalign_authtrl

Severity: Varies **Component:** rpc

Text: (%s) Unaligned RPC_CN_PKT_AUTH_TRL

Explanation: Authorization trailer on CN protocol packet was not properly aligned.

Action: Report the error to your vendor.

0x16c9a15c rpc_m_unexpected_exc

Severity: Varies **Component:** rpc

Text: (%s) Unexpected exception was raised

Explanation: An unexpected exception was caught by the RPC runtime.

Action: Report the error to your vendor.

0x16c9a14e rpc_m_unhandled_callstate

Severity: Varies **Component:** rpc

Text: (%s) Unhandled call state: %s

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a160 rpc_m_unimp_call

Severity: Varies **Component:** rpc

Text: (%s) Call not implemented

Explanation: A call to an unimplemented routine was made by the RPC runtime.

Action: Report the error to your vendor.

0x16c9a159 rpc_m_unk_ifspec

Severity: Varies **Component:** rpc

Text: (%s) Unknown interface spec version

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a15f rpc_m_unk_sock_type

Severity: Varies **Component:** rpc

Text: (%s) Unknown socket type

Explanation: The socket corresponding to a file descriptor is of an unknown type.

Action: Report the error to your vendor.

0x16c9a14d rpc_m_unsupp_stub_rtl_if

Severity: Varies **Component:** rpc

Text: (%s) Unsupported stub/RTL IF version

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a04a rpc_s_access_control_info_inv

Severity: Varies **Component:** rpc

Text: Access control information invalid at remote host

Explanation: The client may have attempted to connect to a server at a protected address for which the client lacks the required permissions. If the client is attempting to connect to a server using the **ncacn_dnet_nsp** protocol sequence using a well known endpoint or a fully specified string binding, there are three possible reasons for this status: The server is not running The server is not listening for client connects over the **ncacn_dnet_nsp** protocol sequence. The server is not listening for client connects on the endpoint specified by the client.

Action: In general, you should modify the access controls on the specified address to allow the client access. If the client is attempting to communicate with a server using the **ncacn_dnet_nsp** protocol sequence with a well-known or explicitly specified endpoint, do the following: Verify at the server node that the server application has been started and is listening over the **ncacn_dnet_nsp** protocol sequence. Verify that the client has specified the correct server endpoint. Verify that both client and server have specified a named server endpoint in upper-case characters. For protocol sequences that allow alphanumeric endpoints, specify endpoints in upper-case characters, not mixed lower-case characters.

0x16c9a022 rpc_s_already_listening

Severity: Varies **Component:** rpc

Text: Already listening

Explanation: A server application called **rpc_server_listen**, but another thread within the process is currently blocked inside a call to this procedure.

Action: Fix the application so that only one thread at a time calls **rpc_server_listen**.

0x16c9a01e rpc_s_already_registered

Severity: Varies **Component:** rpc

Text: Already registered

Explanation: An application tried to set the type of an object to a value that was already set for that object.

Action: Remove the redundant object type setting.

0x16c9a052 rpc_s_assoc_grp_max_exceeded

Severity: Varies **Component:** rpc

Text: Association group maximum exceeded

Explanation: An internal error occurred. The maximum number of associations per association group was exceeded.

Action: Report the error to your vendor.

0x16c9a038 rpc_s_assoc_grp_not_found

Severity: Varies **Component:** rpc

Text: Association group not found

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a056 rpc_s_assoc_shutdown

Severity: Varies **Component:** rpc

Text: Association shutdown

Explanation: An internal error occurred. The client runtime has received a shutdown request from the server runtime.

Action: Report the error to your vendor.

0x16c9a0ed rpc_s_auth_badaddr

Severity: Varies **Component:** rpc

Text: Incorrect network address in authentication request

Explanation: Authentication between the client and server failed.

Action: This may be an attempt to violate system security.

0x16c9a0f5 rpc_s_auth_baddirection

Severity: Varies **Component:** rpc

Text: Incorrect authentication message direction

Explanation: Authentication between the client and server failed.

Action: This may be an attempt to violate system security.

0x16c9a0e6 rpc_s_auth_bad_integrity

Severity: Varies **Component:** rpc

Text: Decrypt integrity check failed

Explanation: A received packet failed integrity check.

Action: This may indicate an attempt to circumvent security.

0x16c9a0f2 rpc_s_auth_badkeyver

Severity: Varies **Component:** rpc

Text: Authentication key version not available

Explanation: Authentication between the client and server failed.

Action: This may be an attempt to violate system security.

0x16c9a0eb rpc_s_auth_badmatch

Severity: Varies **Component:** rpc

Text: Authentication ticket/authenticator do not match

Explanation: Authentication between the client and server failed.

Action: This may indicate an attempt to violate system security.

0x16c9a0f1 rpc_s_auth_badorder

Severity: Varies **Component:** rpc

Text: Authentication message out of order

Explanation: An authentication service message was received out of order.

Action: This may be an attempt to violate system security.

0x16c9a0f7 rpc_s_auth_badseq

Severity: Varies **Component:** rpc

Text: Incorrect sequence number in authentication message

Explanation: Authentication between the client and server failed.

Action: This may be an attempt to violate system security.

0x16c9a0ee rpc_s_auth_badversion

Severity: Varies **Component:** rpc

Text: Authentication protocol version mismatch

Explanation: Authentication between the client and server failed.

Action: This may be an attempt to violate system security.

0x16c9a0f9 rpc_s_auth_field_toolong

Severity: Varies **Component:** rpc

Text: Authentication field too long for implementation

Explanation: An authentication packet with an authentication field exceeding implementation limits was received. This packet is part of the authentication exchange between the RPC runtime and the security server.

Action: This may be an attempt to violate system security.

0x16c9a0f8 rpc_s_auth_inapp_cksum

Severity: Varies **Component:** rpc

Text: Inappropriate authentication checksum type

Explanation: Authentication between the client and server failed.

Action: This may be an attempt to violate system security.

0x16c9a0f6 rpc_s_auth_method

Severity: Varies **Component:** rpc

Text: Alternative authentication method required

Explanation: Authentication between the client and server failed.

Action: This may be an attempt to violate system security.

0x16c9a0f0 rpc_s_auth_modified

Severity: Varies **Component:** rpc

Text: Authentication message stream modified

Explanation: Authentication between the client and server failed.

Action: This may be an attempt to violate system security.

0x16c9a0ef rpc_s_auth_msg_type

Severity: Varies **Component:** rpc

Text: Invalid authentication message type

Explanation: An invalid message was received during the authentication exchange.

Action: This may be an attempt to violate system security.

0x16c9a0f4 rpc_s_auth_mut_fail

Severity: Varies **Component:** rpc

Text: Mutual authentication failed

Explanation: Authentication between the client and server failed.

Action: This may be an attempt to violate system security.

0x16c9a066 rpc_s_authn_authz_mismatch

Severity: Varies **Component:** rpc

Text: Authentication authorization mismatch

Explanation: In a call to **rpc_binding_set_auth_info**, the requested authorization service is not supported by the requested authentication service.

Action: Choose a compatible pair of authentication and authorization services.

0x16c9a100 rpc_s_authn_challenge_malformed

Severity: Varies **Component:** rpc

Text: Authentication challenge malformed

Explanation: The client-side runtime detected that the authentication challenge it was given by the server was incorrectly formed.

Action: This usually does not happen. Check for version skew between client and server, or bugs in the client or server runtime.

0x16c9a0f3 rpc_s_auth_nokey

Severity: Varies **Component:** rpc

Text: Authentication service key not available

Explanation: Authentication between the client and server failed.

Action: This may be an attempt to violate system security.

0x16c9a0ea rpc_s_auth_not_us

Severity: Varies **Component:** rpc

Text: Authentication ticket is not for destination

Explanation: Authentication failed at the server because the ticket was not valid for this server.

Action: This may indicate an attempt to violate system security.

0x16c9a0e9 rpc_s_auth_repeat

Severity: Varies **Component:** rpc

Text: Authentication request is a replay

Explanation: A retransmission of an old request has been detected.

Action: This may indicate an attempt to violate system security.

0x16c9a0ec rpc_s_auth_skew

Severity: Varies **Component:** rpc

Text: Clock skew too great to authenticate

Explanation: Authentication failed because the timestamp in the message indicates that the systems' clocks are too far apart.

Action: The client and server systems' clocks may be skewed, or this may be an attempt to violate system security.

0x16c9a0e7 rpc_s_auth_tkt_expired

Severity: Varies **Component:** rpc

Text: Authentication ticket expired

Explanation: Some security credentials which you've acquired during login have expired.

Action: Acquire or renew your credentials by either logging in again or running **kinit** if available.

0x16c9a0e8 rpc_s_auth_tkt_nyv

Severity: Varies **Component:** rpc

Text: Authentication ticket not yet valid

Explanation: The authentication ticket passed to the server is not yet valid.

Action: This may indicate an attempt to violate system security.

0x16c9a010 rpc_s_binding_has_no_auth

Severity: Varies **Component:** rpc

Text: Not authenticated

Explanation: An application manager routine tried to inquire about authentication information from a client binding handle but the client did not establish any authentication on the call.

Action: The manager routine can either ignore the error or refuse to execute the call. The application writer can change the client to use authentication.

0x16c9a0fb rpc_s_binding_incomplete

Severity: Varies **Component:** rpc

Text: Binding incomplete (no object ID and no endpoint)

Explanation: The specified server binding information was insufficient. In a local or remote management call to the RPC runtime, the client-supplied binding information lacked an endpoint and an associated object UUID.

Action: Supply complete binding information and an object UUID to local or remote management calls.

0x16c9a0b9 rpc_s_binding_vector_full

Severity: Varies **Component:** rpc

Text: Binding vector full

Explanation: An internal status code.

Action: None required.

0x16c9a031 rpc_s_call_cancelled

Severity: Varies **Component:** rpc

Text: Call canceled

Explanation: A cancel was posted to a thread making a remote call. This error condition occurs at the server but is usually not seen by the server application.

Action: None required.

0x16c9a014 rpc_s_call_faulted

Severity: Varies **Component:** rpc

Text: Call faulted

Explanation: The execution of an application manager routine raised a fault (exception), for example, division by zero. Applications usually do not see this error as it is intercepted by the client stub and transformed into the specific error condition that occurs in the application manager routine.

Action: None required.

0x16c9a0e4 rpc_s_call_id_not_found

Severity: Varies **Component:** rpc

Text: Call ID in packet unknown

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a05e rpc_s_call_orphaned

Severity: Varies **Component:** rpc

Text: Call orphaned

Explanation: A client application has given up waiting for a manager routine to return. This error occurs at the server but is usually not seen by the server application.

Action: None required.

0x16c9a067 rpc_s_call_queued

Severity: Varies **Component:** rpc

Text: Call queued

Explanation: An internal status code.

Action: None required.

0x16c9a06f rpc_s_calls_too_large_for_wk_ep

Severity: Varies **Component:** rpc

Text: Calls too large for well known endpoint

Explanation: The specified value of argument **max_call_requests** exceeds the maximum allowed when using a well-known endpoint.

Action: Specify a **max_call_requests** value of **rpc_c_protseq_max_reqs_default** to obtain the maximum value allowed for the specified protocol sequence.

0x16c9a06c rpc_s_call_timeout

Severity: Varies **Component:** rpc

Text: Call timed out

Explanation: A remote call did not return before the timeout set by `rpc_mgmt_set_call_timeout` expired.

Action: None required.

0x16c9a030 `rpc_s_cancel_timeout`

Severity: Varies **Component:** rpc

Text: Cancel timeout

Explanation: A cancel was posted to a thread making a remote call, a non-infinite cancel timeout was previously specified (by `rpc_mgmt_set_cancel_timeout`), and the manager routine did not respond to the cancel within the cancel timeout period.

Action: None required.

0x16c9a037 `rpc_s_cannot_accept`

Severity: Varies **Component:** rpc

Text: Cannot accept

Explanation: An internal error occurred. The network listener thread cannot accept the connection on which a network event was detected.

Action: Report the error to your vendor.

0x16c9a034 `rpc_s_cannot_connect`

Severity: Varies **Component:** rpc

Text: Cannot connect

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a068 `rpc_s_cannot_set_nodelay`

Severity: Varies **Component:** rpc

Text: Cannot set nodelay

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a003 rpc_s_cant_bind_socket

Severity: Varies **Component:** rpc

Text: Cannot bind socket

Explanation: An underlying problem with the local system's network transport service prevented the RPC runtime from assigning an endpoint to a communications socket.

Action: Make sure the underlying network transport service is working. Try a non-RPC application that uses this service (for example, file transfer or remote login). Verify that another executing server is not already using the specified endpoint.

0x16c9a002 rpc_s_cant_create_socket

Severity: Varies **Component:** rpc

Text: Cannot create socket

Explanation: An underlying problem with the local system's network transport service prevented the RPC runtime from creating a communications socket needed to make or receive remote calls.

Action: Make sure the underlying network transport service is working. Try a non-RPC application that uses this service (for example, file transfer or remote login).

0x16c9a05c rpc_s_cant_get_if_id

Severity: Varies **Component:** rpc

Text: Cannot get interface ID

Explanation: The RPC runtime tried to get information about a communications socket but failed due to an underlying network transport service problem.

Action: Make sure the underlying network transport service is working. Try a non-RPC application that uses this service (for example, file transfer or remote login).

0x16c9a05b rpc_s_cant_getpeername

Severity: Varies **Component:** rpc

Text: Cannot get peer name

Explanation: There was a failed attempt to get the network address of the other end of the connection. If the client-server connection is closed, an

executing manager routine that calls either **rpc_binding_to_string_binding** or **rpc_binding_server_from_client** may receive this status. Both routines require connection information that is no longer available. This status can occur if the executing remote procedure was specified with the IDL **maybe** attribute, or if the remote procedure call has been orphaned.

Action: The **getpeername** routine returns the name of the peer connected to a particular socket. See the **getpeername(2)** for more information. In the case of an orphaned call the client can try to reissue the call.

0x16c9a029 rpc_s_cant_inq_socket

Severity: Varies **Component:** rpc

Text: Cannot inquire socket

Explanation: The RPC runtime tried to get information about a communications socket but failed due to an underlying network transport service problem.

Action: Make sure the underlying network transport service is working. Try a non-RPC application that uses this service (for example, file transfer or remote login).

0x16c9a104 rpc_s_class_version_mismatch

Severity: Varies **Component:** rpc

Text: RPC class version mismatch

Explanation: The application attempted to read or modify a name service entry with an incompatible RPC class version. For example, a V1.0 client tried to read a name service entry with a V2.0 version. Only major version incompatibilities are flagged.

Action: Upgrade either the name service entry or client to the appropriate version.

0x16c9a01a rpc_s_coding_error

Severity: Varies **Component:** rpc

Text: RPC coding error

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a016 rpc_s_comm_failure

Severity: Varies **Component:** rpc

Text: Communications failure

Explanation: The RPC runtime that was attempting to implement a call to a remote procedure gave up waiting for the execution of the procedure to start or complete because the RPC runtime determined that it was not communicating with the remote server. .sp The RPC runtime may also return this status when a client makes a remote procedure call using a partially bound binding (no endpoint) and the RPC runtime is unable to communicate with the endpoint map service, which is provided by the RPC daemon.

Action: In the first case, try another server. In the second case, make sure the RPC daemon is running.

0x16c9a04c rpc_s_connect_closed_by_rem

Severity: Varies **Component:** rpc

Text: Connection closed by remote host

Explanation: The network connection was closed by the remote host.

Action: Check the remote process and network. Retry the operation.

0x16c9a035 rpc_s_connection_aborted

Severity: Varies **Component:** rpc

Text: Connection aborted

Explanation: An internal error occurred. The connection has been aborted by either the client or server RPC runtime.

Action: Report the error to your vendor.

0x16c9a036 rpc_s_connection_closed

Severity: Varies **Component:** rpc

Text: Connection closed

Explanation: The underlying session or transport connection has failed. If the client-server connection is closed, an executing manager routine that calls either **rpc_binding_to_string_binding** or **rpc_binding_server_from_client** may see this status. Both routines require connection information that is no longer available. This can occur if the executing remote procedure was specified to be an operation with the IDL **maybe** attribute, or if the remote procedure call has been orphaned.

Action: Verify the underlying connection and retry the operation. In the case of the orphaned call, the client can try to reissue the call.

0x16c9a044 rpc_s_connect_no_resources

Severity: Varies **Component:** rpc

Text: Not enough resources for connection at local or remote host

Explanation: There are insufficient system resources at either the local or remote host to establish the connection.

Action: Check the applicable system resources and retry the operation.

0x16c9a042 rpc_s_connect_rejected

Severity: Varies **Component:** rpc

Text: Connection request rejected

Explanation: The server rejected the connection request from the client. This can be because the server has reached its maximum allowable connect requests.

Action: Check the network connection and then retry the operation. If the network connection is ok, the server may be receiving too many simultaneous client requests. The client can retry the server or try contacting a different server.

0x16c9a041 rpc_s_connect_timed_out

Severity: Varies **Component:** rpc

Text: Connection request timed out

Explanation: The client cannot establish a connection to the server. The operation timed out.

Action: Check the network connection and then retry the operation.

0x16c9a058 rpc_s_context_id_not_found

Severity: Varies **Component:** rpc

Text: Context id not found

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a0e3 rpc_s_credentials_too_large

Severity: Varies **Component:** rpc

Text: Credentials too large for packet

Explanation: The security credentials are too large to fit into an RPC message.

Action: The size of the security credentials is related to the number of groups to which a principal belongs. Reducing the group membership count can reduce the size of the credentials.

0x16c9a0c9 rpc_s_cthread_create_failed

Severity: Varies **Component:** rpc

Text: cthread create failed

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a0cc rpc_s_cthread_invoke_disabled

Severity: Varies **Component:** rpc

Text: cthread invoke disabled

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a0cb rpc_s_cthread_no_such_pool

Severity: Varies **Component:** rpc

Text: No such cthread pool

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a01c rpc_s_cthread_not_found

Severity: Varies **Component:** rpc

Text: Call thread not found

Explanation: An internal error occurred. You'll see this error when the call queue is full. Client requests are coming in faster than they can be executed and eventually the call queue fills up. This status is translated and returned to the calling client as **rpc_s_server_too_busy**.

Action: Report the error to your vendor.

0x16c9a0ca rpc_s_ctype_pool_exists

Severity: Varies **Component:** rpc

Text: ctype pool exists

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a0ba rpc_s_cycle_detected

Severity: Varies **Component:** rpc

Text: Cycle detected

Explanation: A cycle was detected in the course of traversing groups and profiles in the binding import operation.

Action: Modify the structure of groups and profiles in the name service database to eliminate the cycle.

0x16c9a021 rpc_s_desc_not_registered

Severity: Varies **Component:** rpc

Text: Descriptor not registered

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a10c rpc_s_dg_need_way_auth

Severity: Varies **Component:** rpc

Text: DG protocol needs reauthentication.

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a01f rpc_s_endpoint_not_found

Severity: Varies **Component:** rpc

Text: Endpoint not found

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a0a4 rpc_s_entry_already_exists

Severity: Varies **Component:** rpc

Text: Entry already exists

Explanation: The name service entry to which the server or management application is exporting the binding already exists. This is not a problem.

Action: None required.

0x16c9a0a0 rpc_s_entry_not_found

Severity: Varies **Component:** rpc

Text: Entry not found

Explanation: The specified name service object (profile, group, or entry) does not exist in the name service database.

Action: Verify that the object or directory name supplied to the name service (NSI) operation exists and repeat the operation.

0x16c9a074 rpc_s_fault_addr_error

Severity: Varies **Component:** rpc

Text: Fault address error

Explanation: An application manager routine running in the server raised a hardware addressing exception.

Action: Fix the manager routine.

0x16c9a16e rpc_s_fault_codeset_conv_error

Severity: Varies **Component:** rpc

Text: Fault codeset conversion error

Explanation: A server stub or application manager routine received an error status back from a codeset conversion routine.

Action: There is invalid data being converted or the user supplied conversion routine needs to be fixed.

0x16c9a075 rpc_s_fault_context_mismatch

Severity: Varies **Component:** rpc

Text: Fault context mismatch

Explanation: A client application passed a context handle into a remote call, but the server detected that the server does not hold the specified context. This error can happen if a server stops and restarts in between remote calls from the client holding the context handle and the client calls the restarted server. .sp An application sees this status if **rpced** restarts during a sequence of application calls to **rpc_mgmt_ep_elt_inq_next**. The new instance of **rpced** does not inherit the context that was maintained by the previous **rpced**.

Action: If returned from **rpc_mgmt_ep_elt_inq_next**, free the current inquiry context by calling **rpc_mgmt_ep_elt_inq_done** and restart the inquiry by calling **rpc_mgmt_ep_elt_inq_begin**.

0x16c9a076 rpc_s_fault_fp_div_by_zero

Severity: Varies **Component:** rpc

Text: Fault floating point divide by zero

Explanation: An application manager routine attempted to do a floating point division with a denominator of zero.

Action: Fix the manager routine.

0x16c9a077 rpc_s_fault_fp_error

Severity: Varies **Component:** rpc

Text: Fault floating point error

Explanation: An application manager routine failed in the execution of a floating point operation.

Action: Fix the manager routine.

0x16c9a078 rpc_s_fault_fp_overflow

Severity: Varies **Component:** rpc

Text: Fault floating point overflow

Explanation: A floating point calculation in an application manager routine resulted in an arithmetic overflow.

Action: Fix the manager routine.

0x16c9a079 rpc_s_fault_fp_underflow

Severity: Varies **Component:** rpc

Text: Fault floating point underflow

Explanation: A floating point calculation in an application manager routine resulted in an arithmetic underflow.

Action: Fix the manager routine.

0x16c9a07a rpc_s_fault_ill_inst

Severity: Varies **Component:** rpc

Text: Fault illegal instruction

Explanation: An application manager routine attempted to execute an illegal machine instruction.

Action: Fix the manager routine.

0x16c9a07b rpc_s_fault_int_div_by_zero

Severity: Varies **Component:** rpc

Text: Fault integer divide by zero

Explanation: An application manager routine attempted to do an integer division with a denominator of zero.

Action: Fix the manager routine.

0x16c9a07c rpc_s_fault_int_overflow

Severity: Varies **Component:** rpc

Text: Fault integer overflow

Explanation: An integer calculation in an application manager routine resulted in an arithmetic overflow.

Action: Fix the manager routine.

0x16c9a07d rpc_s_fault_invalid_bound

Severity: Varies **Component:** rpc

Text: Fault invalid bound

Explanation: An application made a remote call that attempted to pass or return an array with a dynamically specified bound that is not appropriate to the declared dimensions of the array.

Action: Fix the application.

0x16c9a07e rpc_s_fault_invalid_tag

Severity: Varies **Component:** rpc

Text: Fault invalid tag

Explanation: An application made a remote call that attempted to pass or return a discriminated union with an invalid tag.

Action: Fix the application.

0x16c9a170 rpc_s_fault_no_client_stub

Severity: Varies **Component:** rpc

Text: Fault client stub not linked into application

Explanation: A server stub or application manager routine attempted to make a remote procedure call, but the client stub module for the corresponding IDL interface was not linked into the application.

Action: Relink the application, including the relevant client stub module.

0x16c9a07f rpc_s_fault_pipe_closed

Severity: Varies **Component:** rpc

Text: Fault pipe closed

Explanation: An application manager routine attempted to write data to a pipe that was already closed by writing a terminator to it.

Action: Fix the application.

0x16c9a080 rpc_s_fault_pipe_comm_error

Severity: Varies **Component:** rpc

Text: Fault pipe communication error

Explanation: A communications error occurred while an application manager routine was reading from or writing to a pipe.

Action: The client code must recover from an unsuccessful remote call.

0x16c9a081 rpc_s_fault_pipe_discipline

Severity: Varies **Component:** rpc

Text: Fault pipe discipline

Explanation: An application manager routine returned control to the server stub while there was still pipe data to be read or written.

Action: Fix the application.

0x16c9a082 rpc_s_fault_pipe_empty

Severity: Varies **Component:** rpc

Text: Fault pipe empty

Explanation: An application manager routine attempted to read data from a pipe from which a terminator had already been received.

Action: Fix the application.

0x16c9a083 rpc_s_fault_pipe_memory

Severity: Varies **Component:** rpc

Text: Fault pipe memory

Explanation: The application code provided insufficient memory to allow the marshaling or unmarshaling of an element of a pipe.

Action: Fix the application.

0x16c9a084 rpc_s_fault_pipe_order

Severity: Varies **Component:** rpc

Text: Fault pipe order

Explanation: An application manager routine attempted to use the pipes in an operation in an order other than that required by the IDL language definition.

Action: Fix the application.

0x16c9a085 rpc_s_fault_remote_comm_failure

Severity: Varies **Component:** rpc

Text: Fault remote communication failure

Explanation: A server stub encountered a communications error.

Action: The client code must recover from an unsuccessful remote call.

0x16c9a086 rpc_s_fault_remote_no_memory

Severity: Varies **Component:** rpc

Text: Fault remote no memory

Explanation: A server stub or application manager routine was unable to allocate heap storage.

Action: If the failure is caused by overuse of underlying system resources (for example, address space or swap space), reduce the application's direct use of these resources if possible.

0x16c9a087 rpc_s_fault_unspec

Severity: Varies **Component:** rpc

Text: Fault unspecified

Explanation: A server stub or application manager routine raised an exception of an unknown kind.

Action: Fix the application.

0x16c9a113 rpc_s_fault_user_defined

Severity: Varies **Component:** rpc

Text: User defined exception received

Explanation: This status is given to a *[fault_status]* parameter if the server returned a user exception.

Action: Application dependent.

0x16c9a0a3 rpc_s_group_member_not_found

Severity: Varies **Component:** rpc

Text: Group member not found

Explanation: The server or management application attempted to remove a group member that does not exist in the name service database.

Action: Use the RPC control program to see if the group member exists. If it does not, correct the application. If the group member does exist in the name service database, report the problem to your vendor.

0x16c9a108 rpc_s_helper_aborted

Severity: Varies **Component:** rpc

Text: Helper process aborted

Explanation: The user-space helper process exited before responding to a request. This indicates that either someone stopped the helper process or that a bug in the helper process caused it to crash.

Action: Restart the helper process or fix the bug in the helper process.

0x16c9a107 rpc_s_helper_catatonic

Severity: Varies **Component:** rpc

Text: Helper process catatonic

Explanation: The user-space helper took longer than two to three minutes to respond to a request from the kernel. This indicates that the helper process or the services it depends on are malfunctioning or overloaded.

Action: Ease network congestion, fix bugs, or increase the hard-coded timeout in the kernel.

0x16c9a105 rpc_s_helper_not_running

Severity: Varies **Component:** rpc

Text: Helper process not running

Explanation: The kernel attempted to issue a request to the user space helper process, but discovered that it was not running.

Action: Start a helper process and try again.

0x16c9a10b rpc_s_helper_overflow

Severity: Varies **Component:** rpc

Text: Helper process too busy

Explanation: There were too many outstanding requests in the helper process.

Action: Increase the table size in the helper process and rebuild.

0x16c9a106 rpc_s_helper_short_read

Severity: Varies **Component:** rpc

Text: Short read from kernel helper

Explanation: The kernel attempted to read a request from the user-space DCE helper process, but not enough data was available to satisfy the request. This indicates a bug in the user-space DCE helper process or version skew between the kernel and the helper process.

Action: Fix the bug or upgrade the helper process to match the kernel.

0x16c9a10a rpc_s_helper_wrong_user

Severity: Varies **Component:** rpc

Text: Attempting to use credentials belonging to another user

Explanation: Requests from the kernel to the helper process include the user ID and the credentials to use to authenticate a remote operation. The helper process detected that the user ID attached to a request from the kernel was different from the owner of the request.

Action: This indicates either a kernel bug or an attempt to violate security.

0x16c9a049 rpc_s_host_unreachable

Severity: Varies **Component:** rpc

Text: Remote host is unreachable

Explanation: The specified host is unreachable.

Action: Check the network connectivity. Retry the operation.

0x16c9a00d rpc_s_in_args_too_big

Severity: Varies **Component:** rpc

Text: Input arguments too big

Explanation: The size of the input arguments to a remote call was larger than is allowed in the current context. For example, in broadcast calls the input arguments must fit into a single transport-level packet.

Action: Reduce the size of input arguments.

0x16c9a094 rpc_s_incomplete_name

Severity: Varies **Component:** rpc

Text: Incomplete name

Explanation: An incomplete object or directory name was supplied to some name service (NSI) operation. The operation failed because the name cannot be expanded.

Action: Supply a complete name and retry the operation.

0x16c9a0a2 rpc_s_interface_not_found

Severity: Varies **Component:** rpc

Text: Interface not found

Explanation: The unexport operation did not find any binding information for the specified interface. No binding information was unexported.

Action: Use the RPC control program to find out whether the server entry contains binding information for the specified interface identifier. If the entry contains the binding information, report the problem to your vendor.

0x16c9a063 rpc_s_invalid_arg

Severity: Varies **Component:** rpc

Text: Invalid argument

Explanation: An aspect of the arguments supplied as input to the RPC runtime is inappropriate. In the case of **rpc_mgmt_set_server_stack_size**, the underlying thread package does not support the specified value of argument **thread_stack_size**.

Action: Check the supplied arguments against documentation for the call.

0x16c9a01d rpc_s_invalid_binding

Severity: Varies **Component:** rpc

Text: Invalid binding

Explanation: An application passed a binding handle to the RPC runtime that is invalid (for example, because it specifies an unsupported protocol).

Action: This error is frequently caused by an application passing a bad pointer (for example, to random memory or to a binding that was freed) to an RPC runtime routine that takes a binding handle input parameter. If this is the case, the application should be fixed.

0x16c9a02e rpc_s_invalid_call_opt

Severity: Varies **Component:** rpc

Text: Invalid call option

Explanation: A call was attempted that is not supported by the underlying RPC protocol. For example, calls to procedures marked [**broadcast**] are not supported by all RPC protocols.

Action: Change the application to make only supported calls.

0x16c9a0e1 rpc_s_invalid_checksum

Severity: Varies **Component:** rpc

Text: Received packet has an invalid checksum

Explanation: The checksum on the received packet was invalid. This indicates that a packet was modified in transit.

Action: This may indicate an attempt to violate security.

0x16c9a0fa rpc_s_invalid_crc

Severity: Varies **Component:** rpc

Text: Received packet has an invalid CRC

Explanation: A packet with an invalid cyclic redundancy check was received.

Action: This may be an attempt to violate system security.

0x16c9a0e2 rpc_s_invalid_credentials

Severity: Varies **Component:** rpc

Text: Credentials invalid

Explanation: The security credentials are not valid. Some security exchange has failed.

Action: Check your security server and also make sure that you have logged in properly.

0x16c9a04e rpc_s_invalid_endpoint_format

Severity: Varies **Component:** rpc

Text: Invalid endpoint format for remote host

Explanation: An endpoint string with invalid syntax was supplied as input to the RPC runtime.

Action: Use valid endpoint string syntax.

0x16c9a0a1 rpc_s_invalid_inquiry_context

Severity: Varies **Component:** rpc

Text: Invalid inquiry context

Explanation: An invalid inquiry context was passed to a begin, next, or done operation.

Action: Verify that the inquiry context is non-null and was successfully created in a begin operation.

0x16c9a0a9 rpc_s_invalid_inquiry_type

Severity: Varies **Component:** rpc

Text: Invalid inquiry type

Explanation: The application program attempted to perform a lookup in either a profile or an endpoint map using an unsupported lookup key.

Action: Make sure that the **inquiry_type** argument passed to **rpc_ns_profile_elt_inq_begin** or **rpc_mgmt_ep_elt_inq_begin** is within the set of supported values.

0x16c9a02a rpc_s_invalid_naf_id

Severity: Varies **Component:** rpc

Text: Invalid network address family ID

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a096 rpc_s_invalid_name_syntax

Severity: Varies **Component:** rpc

Text: Invalid name syntax

Explanation: An invalid value was specified for the entry name syntax.

Action: Check the value provided and use one of the API defined constants **rpc_c_ns_syntax_***.

0x16c9a0d9 rpc_s_invalid_ns_handle

Severity: Varies **Component:** rpc

Text: Invalid name service handle

Explanation: An invalid name service handle was passed to a begin, next, or done operation.

Action: Verify that the name service handle is non-null and was successfully created in a begin operation.

0x16c9a03a rpc_s_invalid_object

Severity: Varies **Component:** rpc

Text: Invalid object

Explanation: An application specified an illegal UUID value or specified a value that was not a valid UUID.

Action: Verify that the provided value is a UUID and that the called routine allows that value. Some routines do not allow a nil UUID.

0x16c9a0b6 rpc_s_invalid_priority

Severity: Varies **Component:** rpc

Text: Invalid priority

Explanation: The server or management application attempted to add a profile element at an invalid priority.

Action: Modify the application code to use a valid priority value.

0x16c9a020 rpc_s_invalid_rpc_protseq

Severity: Varies **Component:** rpc

Text: Invalid RPC protocol sequence

Explanation: An application specified an RPC protocol sequence that is not recognized by the RPC runtime.

Action: Specify only valid RPC protocol sequences.

0x16c9a040 rpc_s_invalid_string_binding

Severity: Varies **Component:** rpc

Text: Invalid string binding

Explanation: An application presented a string binding as input to the RPC runtime and the string binding has invalid syntax.

Action: Use the correct string binding syntax.

0x16c9a028 rpc_s_invalid_timeout

Severity: Varies **Component:** rpc

Text: Invalid timeout

Explanation: An application specified an invalid timeout value to `rpc_mgmt_set_com_timeout`.

Action: Supply a valid timeout value.

0x16c9a0bd rpc_s_invalid_vers_option

Severity: Varies **Component:** rpc

Text: Invalid interface version option

Explanation: The specified **vers_option** argument value was invalid.

Action: Check the value provided and use one of the API defined constants **rpc_c_vers_***.

0x16c9a02b rpc_s_inval_net_addr

Severity: Varies **Component:** rpc

Text: Invalid network address

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a0fc rpc_s_key_func_not_allowed

Severity: Varies **Component:** rpc

Text: Key function not allowed when default authentication service specified

Explanation: A server application called **rpc_server_register_auth_info** with the default authentication service as input but also supplied a non-null key acquisition function as input.

Action: Specify either a nondefault authentication function or a **NULL** key function.

0x16c9a0e5 rpc_s_key_id_not_found

Severity: Varies **Component:** rpc

Text: Key ID in packet unknown

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a04b rpc_s_loc_connect_aborted

Severity: Varies **Component:** rpc

Text: Connection aborted by local host

Explanation: The client's attempt to connect to the server was aborted by the local system.

Action: Check network and system resource availability. Retry operation.

0x16c9a06e rpc_s_manager_not_entered

Severity: Varies **Component:** rpc

Text: Manager not entered

Explanation: An internal status code.

Action: None required.

0x16c9a0c8 rpc_s_max_calls_too_small

Severity: Varies **Component:** rpc

Text: Max calls (threads) too small

Explanation: A server application passed too small a value as the **max_calls_exec** input parameter to **rpc_server_listen**.

Action: Pass a large enough value for parameter **max_calls_exec**.

0x16c9a026 rpc_s_max_descs_exceeded

Severity: Varies **Component:** rpc

Text: Max descriptors exceeded

Explanation: An application caused the RPC runtime to use more file descriptors (for communications sockets) than the runtime is able to store internally.

Action: The RPC runtime's use of file descriptors can be reduced by making fewer remote calls in parallel, or by calling **rpc_server_use_protseq**, or one of its variants, fewer times.

0x16c9a0bf rpc_s_mbr_picked

Severity: Varies **Component:** rpc

Text: Member picked

Explanation: An internal status code.

Action: Report the error to your vendor.

0x16c9a119 rpc_s_mgmt_bad_type

Severity: Varies **Component:** rpc

Text: Unsupported attribute type was given to NSI

Explanation: One of the **rpc_ns_mgmt_*** routines was given an invalid name service (NSI) attribute type. The attribute should be one of the pre-architected types.

Action: Fix the program to pass a valid NSI attribute type.

0x16c9a06d rpc_s_mgmt_op_disallowed

Severity: Varies **Component:** rpc

Text: Management operation disallowed

Explanation: A client application called one of the local or remote management RPC runtime functions and the remote server refused to execute it.

Action: None required.

0x16c9a093 rpc_s_name_service_unavailable

Severity: Varies **Component:** rpc

Text: Name service unavailable

Explanation: A name service (NSI) operation was unable to communicate with the name service server, for example, the CDS server.

Action: Verify that the name service server is running.

0x16c9a043 rpc_s_network_unreachable

Severity: Varies **Component:** rpc

Text: Network is unreachable

Explanation: The server is not reachable from the client.

Action: Check the network connection between the server and client systems. Then retry the operation.

0x16c9a05a rpc_s_no_addrs

Severity: Varies **Component:** rpc

Text: No addresses

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a025 rpc_s_no_bindings

Severity: Varies **Component:** rpc

Text: No bindings

Explanation: An application passed an empty or null binding vector as input to the RPC runtime or requested a binding vector to be returned by the RPC runtime, but no bindings exist.

Action: In the first case, change the application to pass a valid binding vector. The second case may not indicate an error condition.

0x16c9a0c1 rpc_s_no_entry_name

Severity: Varies **Component:** rpc

Text: No entry name

Explanation: The binding handle does not refer to a name service entry name. Binding handles returned from the import and lookup operations refer to the name of the name service entry where the binding information was found. Binding handles obtained from other sources (for example, from a string binding), do not refer to an entry name.

Action: If a binding handle returned by the import or lookup operation does not refer to an entry name, report to your vendor.

0x16c9a0c4 rpc_s_no_env_setup

Severity: Varies **Component:** rpc

Text: Name service environment variable not defined

Explanation: A **NULL** entry name was specified in the import or lookup begin operations and the **RPC_DEFAULT_ENTRY** environment variable was not defined.

Action: Either define the **RPC_DEFAULT_ENTRY** environment variable or specify a non-null entry name in import or lookup begin.

0x16c9a02f rpc_s_no_fault

Severity: Varies **Component:** rpc

Text: No fault

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a027 rpc_s_no_interfaces

Severity: Varies **Component:** rpc

Text: No interfaces

Explanation: An application requested a list of the network interfaces registered by a server but no interfaces were registered.

Action: Check that a server instance exporting the desired interfaces is running.

0x16c9a0b1 rpc_s_no_interfaces_exported

Severity: Varies **Component:** rpc

Text: No interfaces exported

Explanation: No interfaces were exported to the specified name service entry. This status code is returned by **rpc_ns_mgmt_entry_inq_if_ids**.

Action: None required.

0x16c9a012 rpc_s_no_memory

Severity: Varies **Component:** rpc

Text: No memory for RPC runtime

Explanation: The RPC runtime was unable to allocate heap storage, or a fixed buffer supplied to IDL Encoding Services was not large enough.

Action: If the failure is caused by overuse of the underlying system resources (for example, address space or swap space), reduce the application's direct use of these resources if possible, or use a larger buffer when calling IDL Encoding Services.

0x16c9a102 rpc_s_no_mepv

Severity: Varies **Component:** rpc

Text: No manager EPV available

Explanation: The **rpc_server_register_if** routine was called specifying the default manager entry point vector (EPV), but no manager EPV exists (the server stub was generated using **-no_mepv**).

Action: Regenerate the server stub without specifying **-no_mepv** or provide a manager EPV.

0x16c9a0b5 rpc_s_no_more_bindings

Severity: Varies **Component:** rpc

Text: No more bindings

Explanation: A client or management application performing a lookup operation on a name service entry exhausted the list of compatible bindings that were exported.

Action: None required.

0x16c9a0a7 rpc_s_no_more_elements

Severity: Varies **Component:** rpc

Text: No more profile elements

Explanation: No more profile elements are found in the profile lookup. This is usually not reported through the API.

Action: Report the error to your vendor.

0x16c9a097 rpc_s_no_more_members

Severity: Varies **Component:** rpc

Text: No more members

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a0a8 rpc_s_no_ns_permission

Severity: Varies **Component:** rpc

Text: No permission for name service operation

Explanation: The application program attempted to perform a name service operation that required permissions which the process did not possess.

Action: Make sure that the application has the requisite name service permission and retry the operation.

0x16c9a023 rpc_s_no_protseqs

Severity: Varies **Component:** rpc

Text: No protocol sequences

Explanation: An application requested a list of the protocol sequences supported by the RPC runtime, but none are supported.

Action: This may be an internal error. Report the error to your vendor.

0x16c9a024 rpc_s_no_protseqs_registered

Severity: Varies **Component:** rpc

Text: No protocol sequences registered

Explanation: A server application called **rpc_server_listen** but did not previously call **rpc_server_use_protseq** or one of its variants.

Action: Fix the application to call **rpc_server_use_protseq** or one of its variants.

0x16c9a047 rpc_s_no_rem_endpoint

Severity: Varies **Component:** rpc

Text: Endpoint does not exist at remote host

Explanation: No process was found at the specified endpoint.

Action: Check the network connection and then retry the operation.

0x16c9a171 rpc_s_no_server_stub

Severity: Varies **Component:** rpc

Text: Server stub not linked into application

Explanation: A client stub or client application routine invoked a function which causes the client to be set up as a server of a particular IDL interface, but the server stub module for the IDL interface was not linked into the application.

Action: Relink the application, including the relevant server stub module.

0x16c9a0c0 rpc_s_not_all_objs_unexported

Severity: Varies **Component:** rpc

Text: Not all objects unexported

Explanation: One or more of the object UUIDs specified for unexport were not found in the specified name service entry and therefore could not be removed.

Action: Verify that your application is unexporting the object UUIDs that were previously exported.

0x16c9a09c rpc_s_not_found

Severity: Varies **Component:** rpc

Text: Not found

Explanation: The specified name service entry was not found in the name service database. This entry could have been specified directly or indirectly through a profile or group.

Action: Report the error to your vendor.

0x16c9a0bb rpc_s_nothing_to_export

Severity: Varies **Component:** rpc

Text: Nothing to export

Explanation: The exporting application failed to provide an interface specification or a binding vector, and the object UUID vector is **NULL** (or empty).

Action: To export binding information, provide an interface specification and a binding vector. To export objects, provide an object UUID vector. To export binding information and objects, provide an interface specification, binding vector, and object UUID vector.

0x16c9a0bc rpc_s_nothing_to_unexport

Severity: Varies **Component:** rpc

Text: Nothing to unexport

Explanation: The server or management application attempted to unexport binding information for an interface ID that is not present in the target entry or to unexport object UUIDs that are not present.

Action: None required.

0x16c9a109 rpc_s_not_in_kernel

Severity: Varies **Component:** rpc

Text: Feature not supported in kernel

Explanation: A kernel application attempted to use a feature that is not supported in the kernel.

Action: Modify your application to avoid using that feature.

0x16c9a10f rpc_s_not_listening

Severity: Varies **Component:** rpc

Text: Listener thread is not running

Explanation: A request has been made through the **rpc_mgmt_stop_server_listening** call to stop the listener thread but the listener thread is not running.

Action: Depending upon what the caller of **rpc_mgmt_stop_server_listening** expected, this may be expected behavior or it may indicate an application program logic error. Recheck the program logic.

0x16c9a0b7 rpc_s_not_rpc_entry

Severity: Varies **Component:** rpc

Text: Not an RPC entry

Explanation: An internal status code.

Action: None required.

0x16c9a069 rpc_s_not_rpc_tower

Severity: Varies **Component:** rpc

Text: Not an RPC tower

Explanation: An internal status code. The protocol tower from the name service is not an RPC tower.

Action: Report the error to your vendor.

0x16c9a064 rpc_s_not_supported

Severity: Varies **Component:** rpc

Text: Not supported

Explanation: The requested operation is not supported by the RPC runtime. In the case of **rpc_mgmt_set_server_stack_size**, the underlying thread package does not support setting the stack size.

Action: Do not use the operation.

0x16c9a01b rpc_s_object_not_found

Severity: Varies **Component:** rpc

Text: Object not found

Explanation: Information was requested (for example, through **rpc_object_inq_type**) about an object that is unknown to the RPC runtime.

Action: Call **rpc_object_set_type** or **rpc_object_set_inq_fn** if appropriate.

0x16c9a001 rpc_s_op_rng_error

Severity: Varies **Component:** rpc

Text: Operation out of range

Explanation: A client called the n'th (zero-based) operation in an interface but the server supports fewer than n-1 operations from the interface.

Action: Modify the server to support the additional operations or arrange for the client to find a server that supports the requested operation.

0x16c9a117 rpc_s_partial_credentials

Severity: Varies **Component:** rpc

Text: Credentials have been fragmented

Explanation: The client's credentials were too large to fit in a single datagram packet. The client fragments them, and is returning only one fragment at this time.

Action: The server must use the **conv_who_are_you_auth_more** call to retrieve the remaining fragments of the client's credentials.

0x16c9a0c3 rpc_s_partial_results

Severity: Varies **Component:** rpc

Text: Partial results

Explanation: A name service entry was found to exist for a portion of the specified entry name. This status indicates that the resolved and unresolved portions of the name are returned as output arguments.

Action: If the name should be fully resolved, use the RPC control program to verify that a name service entry of the full name exists. If the entry exists, report the problem to your vendor.

0x16c9a0c2 rpc_s_priority_group_done

Severity: Varies **Component:** rpc

Text: Priority group done

Explanation: An internal status code.

Action: Report the error to your vendor.

0x16c9a0aa rpc_s_profile_element_not_found

Severity: Varies **Component:** rpc

Text: Profile element not found

Explanation: The server or management application called **rpc_ns_profile_elt_remove** specifying a profile member name that was not found in the name service database.

Action: Use the RPC control program to see if the profile element exists. If it does not, correct the application. If the profile element does exist in the name service database, report the problem to the vendor.

0x16c9a0ab rpc_s_profile_element_replaced

Severity: Varies **Component:** rpc

Text: Profile element replaced

Explanation: The profile element that the server or management application is adding already exists in the name service database. The old element was replaced.

Action: None required.

0x16c9a101 rpc_s_protect_level_mismatch

Severity: Varies **Component:** rpc

Text: Protection level changed unexpectedly

Explanation: The runtime detected an unexpected change to the protection level.

Action: This usually does not happen. Check for version skew between client and server, bugs in the client or server runtime, or modifications to packets sent over the network.

0x16c9a03e rpc_s_protocol_error

Severity: Varies **Component:** rpc

Text: Protocol error

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a0ff rpc_s_proto_unsupp_by_auth

Severity: Varies **Component:** rpc

Text: RPC protocol not supported by this authentication protocol

Explanation: An application attempted to use a combination of authentication and RPC protocols that do not work together.

Action: Use RPC and authentication protocols that do work together.

0x16c9a05d rpc_s_protseq_not_supported

Severity: Varies **Component:** rpc

Text: Protocol sequence not supported

Explanation: An application specified an RPC protocol sequence that is recognized but is not supported by the RPC runtime.

Action: Specify only RPC protocol sequences supported by your vendor.

0x16c9a04d rpc_s_rem_host_crashed

Severity: Varies **Component:** rpc

Text: Remote host crashed

Explanation: The remote system crashed.

Action: Restart the remote host system and retry the operation.

0x16c9a048 rpc_s_rem_host_down

Severity: Varies **Component:** rpc

Text: Remote host is down

Explanation: The remote system is down.

Action: Retry the operation when the remote system is available or select a different system.

0x16c9a045 rpc_s_rem_network_shutdown

Severity: Varies **Component:** rpc

Text: Network is down

Explanation: The network connection has been shutdown. This could have been initiated by the client, server, or management application.

Action: Check the network connection and then restart the server or client.

0x16c9a017 rpc_s_rpcd_comm_failure

Severity: Varies **Component:** rpc

Text: RPC daemon communications failure

Explanation: The RPC runtime detected a failure while trying to communicate with the RPC daemon.

Action: Use the RPC control program to verify that the RPC daemon is running.

0x16c9a072 rpc_s_rpc_prot_version_mismatch

Severity: Varies **Component:** rpc

Text: RPC protocol version mismatch

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a070 rpc_s_server_too_busy

Severity: Varies **Component:** rpc

Text: Server too busy

Explanation: Client requests are coming in faster than they can be executed by the server and the server's call queue reached the maximum allowed.

Action: A client can retry the operation with a different server or wait a period of time and retry when the current sever is less busy. Otherwise, the server can be modified to increase the number of concurrent calls that can be executed by providing a larger **max_calls_exec** argument value when calling **rpc_server_listen**.

0x16c9a054 rpc_s_sm_invalid_state

Severity: Varies **Component:** rpc

Text: Invalid state machine state

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a0df rpc_s_socket_failure

Severity: Varies **Component:** rpc

Text: Persistent errors on socket

Explanation: The RPC runtime encountered repeated errors using a communication socket.

Action: Make sure the underlying network transport service is working. Try a non-RPC application that uses this service (for example, file transfer or remote login).

0x16c9a110 rpc_s_ss_bad_buffer

Severity: Varies **Component:** rpc

Text: Buffer not usable by IDL Encoding Services

Explanation: A buffer handed to the IDL Encoding Services was not 8-byte aligned or was not a multiple of 8 bytes.

Action: Modify the application code so that the buffer is aligned on an 8-byte boundary and is a multiple of 8 bytes long.

0x16c9a111 **rpc_s_ss_bad_es_action**

Severity: Varies **Component:** rpc

Text: Action cannot be performed by IDL Encoding Services

Explanation: Either the action requested in the handle being used was inconsistent with what was specified in the attribute configuration file (ACF), or **idl_es_inq_encoding_id** was called with an encoding handle that has not yet been used for any operation.

Action: In the first case, recompile the stubs using a modified ACF. In the second case modify the application code so that it does not make this call.

0x16c9a0db **rpc_s_ss_char_trans_open_fail**

Severity: Varies **Component:** rpc

Text: Could not open file containing ASCII/EBCDIC translation tables

Explanation: The file named in the environment variable **DCERPCCHARTRANS** is not accessible or does not exist.

Action: Either make the named file available, or unset **DCERPCCHARTRANS** and use the default ASCII/EBCDIC translation tables.

0x16c9a0dc **rpc_s_ss_char_trans_short_file**

Severity: Varies **Component:** rpc

Text: File containing ASCII/EBCDIC translation tables is damaged

Explanation: The file named in the environment variable **DCERPCCHARTRANS** contains less than 512 bytes.

Action: Either make a valid file available, or unset **DCERPCCHARTRANS** and use the default ASCII/EBCDIC translation tables.

0x16c9a125 **rpc_s_ss_cleanup_failed**

Severity: Varies **Component:** rpc

Text: Cleanup failed within an evaluation routine.

Explanation: A cleanup function was called from **rpc_ns_binding_lookup_done**, and its return status was other than **rpc_s_ok**.

Action: Application dependent.

0x16c9a16f rpc_s_ss_codeset_conv_error

Severity: Varies **Component:** rpc

Text: codeset conversion error

Explanation: A server stub or application manager routine received an error status back from a codeset conversion routine.

Action: There is invalid data being converted or the user supplied conversion routine needs to be fixed.

0x16c9a0dd rpc_s_ss_context_damaged

Severity: Varies **Component:** rpc

Text: A client side context handle has been incorrectly modified

Explanation: The client-side representation of a context handle was changed while a remote procedure call was in progress.

Action: Make sure there is no client-side thread, running concurrently with the remote procedure call, that modifies the context handle during the remote call's execution.

0x16c9a11c rpc_s_ss_iconv_error

Severity: Varies **Component:** rpc

Text: iconv failed other than conversion operation

Explanation: An **iconv** conversion routine failed when **conv_close** was called, or when **iconvsize** (HP specific) was called.

Action: Report the error to your vendor.

0x16c9a114 rpc_s_ss_incompatible_codesets

Severity: Varies **Component:** rpc

Text: Conversion between codesets not possible

Explanation: This status is used by International Character codeset conversion routines to indicate that conversion between the network and local codesets is not possible.

Action: Application dependent.

0x16c9a0de **rpc_ss_in_null_context**

Severity: Varies **Component:** rpc

Text: Null value of [in] context handle or all [in,out] context handles

Explanation: If an operation has [in] or [in,out] context handle parameters, the binding for that operation is determined using those parameters. A null context handle does not refer to valid binding information.

Action: Make sure that all [in] context handles are non-null. If the operation has [in,out] context handle parameters but no [in] context handles, make sure that at least one of the [in,out] context handles is non-null.

0x16c9a11a **rpc_ss_invalid_char_input**

Severity: Varies **Component:** rpc

Text: Invalid character input for conversion

Explanation: **iconv** or an XPG4 multibyte conversion routine detected invalid character input, for example, multibyte input or lock-shift sequence that spans the input buffer boundary, or an input character not in the set of characters being converted from.

Action: Application dependent.

0x16c9a118 **rpc_ss_invalid_codeset_tag**

Severity: Varies **Component:** rpc

Text: I18N tags structure is not valid

Explanation: The **rpc_cs_get_tags** routine found that the extended binding handle for I18N operation was broken.

Action: If the **rpc_cs_get_tags** routine is called directly from a user program, the user program probably modified the binding handle incorrectly. In this case, the user must write his own **get_tags** routine. If the user program uses the default RPC runtime I18N functionality, report the error to your vendor.

0x16c9a11e rpc_s_ss_no_compat_charsets

Severity: Varies **Component:** rpc

Text: Character sets are not compatible

Explanation: The code set evaluation routine examines character set compatibility before it checks code set compatibility, because connecting different languages, English and Chinese, for example, could result in massive data loss. The evaluation routine detected that the server and client do not share the same language.

Action: Application dependent.

0x16c9a11d rpc_s_ss_no_compat_codeset

Severity: Varies **Component:** rpc

Text: No compatible code set found

Explanation: Code set compatibility evaluation does not fall back to the universal encoding when **rpc_cs_eval_without_universal** is called. This status code indicates that **rpc_cs_eval_without_universal** was called when the server and client did not have a common encoding that both could recognize and convert.

Action: Application dependent.

0x16c9a073 rpc_s_ss_no_import_cursor

Severity: Varies **Component:** rpc

Text: No import cursor

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a11b rpc_s_ss_short_conv_buffer

Severity: Varies **Component:** rpc

Text: No room to place the converted characters

Explanation: An **iconv** conversion routine detected that there was no room left in the output buffer to place the converted characters.

Action: Application dependent.

0x16c9a112 rpc_s_ss_wrong_es_version

Severity: Varies **Component:** rpc

Text: Wrong version of IDL Encoding Services

Explanation: The decoding operation was inconsistent with the version of software used to create the encoding.

Action: Upgrade the installed version of DCE to one that supports the version of IDL Encoding Services specified in the encoded data.

0x16c9a103 rpc_s_stub_protocol_error

Severity: Varies **Component:** rpc

Text: Stub or runtime protocol error

Explanation: An internal stub or runtime error occurred.

Action: Report the error to your vendor.

0x16c9a046 rpc_s_too_many_rem_connects

Severity: Varies **Component:** rpc

Text: Too many connections at remote host

Explanation: The client could not establish a connection with the server because there are too many open connections at the remote server system.

Action: Retry the operation at a different server or when the current server's load decreases.

0x16c9a057 rpc_s_tsyntaxes_unsupported

Severity: Varies **Component:** rpc

Text: Transfer syntaxes unsupported

Explanation: An internal error occurred. The proposed transfer syntax is not supported by the server.

Action: Report the error to your vendor.

0x16c9a115 rpc_s_tx_not_in_transaction

Severity: Varies **Component:** rpc

Text: Transaction not started before operation

Explanation: A transactional RPC call was attempted on an operation that specified the **[transaction_mandatory]** attribute and the application program was not in a transaction.

Action: Either start a transaction prior to making the call, or remove the **[transaction_mandatory]** attribute associated with the operation. The **[transaction_optional]** attribute can be specified for the operation.

0x16c9a116 rpc_s_tx_open_failed

Severity: Varies **Component:** rpc

Text: Transaction open failed at server

Explanation: A transactional RPC operation was called and the server had either not previously called **tx_open()** or the call to **tx_open()** by the transaction manager failed.

Action: In the case where resource managers are used that require the operating system process as the thread of control, the application program must call **tx_open()** at the RPC server prior to receiving an RPC call. In the case where all resource managers used support the DCE thread of control, the transaction manager will call **tx_open()**; the user must make sure that the call to **tx_open()** succeeds.

0x16c9a061 rpc_s_type_already_registered

Severity: Varies **Component:** rpc

Text: Type already registered

Explanation: A server application tried to register an interface and type (by means of **rpc_server_register_if**) that was previously registered.

Action: Remove the redundant registration or unregister before registering.

0x16c9a0d8 rpc_s_underspecified_name

Severity: Varies **Component:** rpc

Text: Name is underspecified

Explanation: The syntax of a specified entry name indicated a global name. However, the cell name portion does not resolve to a cell. For example, this status

code would be returned if the cell name is `/.../c=us/o=osf/ou=dce`, but the cell name portion of the specified entry name is `/.../c=us` or `/.../c=us/o=osf`.

Action: Provide the full cell name portion in the specified entry name.

0x16c9a011 `rpc_s_unknown_authn_service`

Severity: Varies **Component:** `rpc`

Text: Unknown authentication service

Explanation: A client specified an authentication service that is not supported by the RPC runtime.

Action: Change the client to use no authentication or one of the supported authentication services.

0x16c9a0da `rpc_s_unknown_error`

Severity: Varies **Component:** `rpc`

Text: Unidentified communications error in client stub

Explanation: A communications error detected by the client stub could not be mapped to an exception. Note that this status is only used as the status value of the `rpc_x_unknown_error` exception.

Action: This error should be reported to your vendor. All client communication errors should result in identifiable exceptions. However, as a workaround, the `rpc_x_unknown_error` exception can be handled as a client communications error.

0x16c9a02c `rpc_s_unknown_if`

Severity: Varies **Component:** `rpc`

Text: Unknown interface

Explanation: A client application tried to make a remote call using an interface that the server being called does not support. This condition also includes the binding specifying a server that does not support the RPC management service (the `rpc_mgmt_*` routines). This situation can occur if a DCE client is trying to make a `rpc_mgmt_*` call to a NCS V1.5.1 server, or the decoding operation specified to IDL Encoding Services is not in the interface specified in encoded data.

Action: The client may have bound to an inappropriate server. Rebind the client to another server, or modify the application code to use the correct decoding call.

0x16c9a0fe rpc_s_unknown_ifspec_vers

Severity: Varies **Component:** rpc

Text: Interface's version is unknown

Explanation: An application supplied an interface handle that referred to an interface that specified an unknown interface format version. (The interface format version specifies how the interface specification is laid out internally. Do not confuse it with the contents of the IDL version field in an interface definition.) Either the handle is invalid (it does not point to a interface) or there is a version skew between the IDL compiler and RPC runtime used by the application developer.

Action: Make sure the handle is valid and that correct versions of the IDL compiler and the RPC runtime are used.

0x16c9a050 rpc_s_unknown_mgr_type

Severity: Varies **Component:** rpc

Text: Unknown or unsupported manager type

Explanation: A client application tried to make a remote call using a binding handle whose associated object UUID has a type that is unsupported for the interface being used.

Action: Either the client bound to an inappropriate server (in which case it should rebound to another server) or there is an application error.

0x16c9a060 rpc_s_unknown_reject

Severity: Varies **Component:** rpc

Text: Unknown reject

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a0fd rpc_s_unknown_stub_rtl_if_vers

Severity: Varies **Component:** rpc

Text: Interface's stub/runtime version is unknown

Explanation: An application supplied an interface handle that referred to an interface that specified an unknown stub or runtime interface version. Either the handle is

invalid (did not point to an interface) or there is a version skew between the IDL compiler and the RPC runtime used by the application developer.

Action: Make sure the handle is valid and that correct versions of the IDL compiler and RPC runtime are used.

0x16c9a10d rpc_s_unsupported_auth_subtype

Severity: Varies **Component:** rpc

Text: Receiver cannot support authentication subtype

Explanation: The receiver cannot support the authentication subtype. The connection-oriented protocol supports more than one algorithm for computations performed during security processing. In this case the sender of a remote procedure call requested the receiver to use an algorithm that the receiver (the server system) does not support.

Action: This may be an attempt to violate system security.

0x16c9a0a6 rpc_s_unsupported_name_syntax

Severity: Varies **Component:** rpc

Text: Unsupported name syntax

Explanation: The value specified for the entry name syntax was valid, but not supported.

Action: Check the value provided and use one of the supported API defined constants `rpc_c_ns_syntax_*`.

0x16c9a0e0 rpc_s_unsupported_protect_level

Severity: Varies **Component:** rpc

Text: Requested protection level is not supported

Explanation: The value for the protection level supplied to `rpc_binding_set_auth_info` is unsupported.

Action: Change the application to use a supported value.

0x16c9a02d rpc_s_unsupported_type

Severity: Varies **Component:** rpc

Text: Unsupported type

Explanation: A client application tried to make a remote call using a binding handle whose associated object UUID has a type that is unsupported for the interface being used.

Action: Either the client established a binding with an inappropriate server (and the client should rebind to another server), or an application error exists.

0x16c9a05f `rpc_s_who_are_you_failed`

Severity: Varies **Component:** rpc

Text: Who are you failed

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a006 `rpc_s_wrong_boot_time`

Severity: Varies **Component:** rpc

Text: Wrong boot time

Explanation: A binding handle that is successfully used to make a remote procedure call using the **ncadg** RPC protocol will be bound to that server instance (identified by remembering the server's boot (startup) time in the binding handle). An **ncadg** remote procedure call made to a different server instance than the one originally associated with the binding handle results in the remote procedure call failing with this status code. .sp An application may also see this status code returned from the **rpc_mgmt_ep_elt_inq_begin** routine. In this case, the endpoint map service rebooted during the lifetime of the inquiry context.

Action: For the case of a failed remote procedure call, the client can call **rpc_binding_reset** for communications with the new server instance to succeed. .sp For inquiring endpoint map elements, call **rpc_mgmt_ep_elt_inq_done** to delete the failed inquiry context. Next, restart the inquiry by calling **rpc_mgmt_ep_elt_inq_begin**.

0x16c9a065 `rpc_s_wrong_kind_of_binding`

Severity: Varies **Component:** rpc

Text: Wrong kind of binding

Explanation: An application specified a client (server) binding handle as input to an RPC runtime routine that expects a server (client) binding handle.

Action: Change the application to use the correct kind of binding handle.

0x16c9a10e rpc_s_wrong_pickle_type

Severity: Varies **Component:** rpc

Text: Wrong type of pickle passed to unpickling routine

Explanation: Pickles are typed with a UUID. Unpickling routines are specific to a single type of pickle. If an unpickling routine is passed a pickle containing the wrong type UUID it will return this status code.

Action: Use the correct pickling routine or the correct type of pickle.

0x17122eea rsdb_cell_mismatch

Severity: Fatal **Component:** sec/sec_s_rs_rsdb

Text: Database cell name %s is not local cell name or alias

Explanation: The cell name found in the security database does not match the name of the local cell configured in dce_cf.db

Action: ensure that local dce_cf.db matches security database and that security database is well formed

0x17122ee9 rsdb_check_cell_failure

Severity: Fatal **Component:** sec/sec_s_rs_rsdb

Text: Unable to check local cell name

Explanation: Unable to verify local cell name vs. database cell name

Action: ensure that local dce_cf.db matches security database and that security database is well formed

0x17122ee3 rsdb_journal_cant_init_list

Severity: Fatal **Component:** sec/sec_s_rs_rsdb

Text: Could not initialize journal list

Explanation: ?

Action: ?

0x17122ee4 rsdb_journal_cant_open

Severity: Fatal **Component:** sec/sec_s_rs_rsdB

Text: Unable to open registry journal file

Explanation: ?

Action: ?

0x17122ee1 rsdb_journal_create_fail

Severity: Error **Component:** sec/sec_s_rs_rsdB

Text: Cannot create registry journal file

Explanation: ?

Action: ?

0x17122ee2 rsdb_journal_hdr_write_failed

Severity: Error **Component:** sec/sec_s_rs_rsdB

Text: Cannot create to registry journal header

Explanation: ?

Action: ?

0x17122ee0 rsdb_journal_open

Severity: Error **Component:** sec/sec_s_rs_rsdB

Text: Journal file already open

Explanation: ?

Action: ?

0x17122ee5 rsdb_login_cant_init_list

Severity: Fatal **Component:** sec/sec_s_rs_rsdB

Text: Could not initialize login list

Explanation: ?

Action: ?

0x17122026 sec_acl_bad_acl_syntax

Severity: Varies **Component:** sec

Text: bad acl syntax

Explanation: Specified ACL is not valid at this ACL manager. This error can be returned if less than 1 ACL is specified on a replace operation, or if more than 1 is specified on a replace and the controlling ACL manager was only expecting 1.

Action: Fix application, or notify support personnel if you have no access to the application source.

0x17122021 sec_acl_bad_key

Severity: Varies **Component:** sec

Text: bad information in sec_acl_key

Explanation: Internal error.

Action: Notify support personnel.

0x17122032 sec_acl_bad_parameter

Severity: Varies **Component:** sec

Text: bad parameter for acl operation

Explanation: Internal error, should never occur.

Action: Notify support personnel.

0x17122037 sec_acl_bad_permset

Severity: Varies **Component:** sec

Text: permission set is not valid for this acl manager type

Explanation: One or more permissions not valid for this type of ACL.

Action: Ensure that permissions are specified correctly.

0x1712202c sec_acl_bind_error

Severity: Varies **Component:** sec

Text: binding error on acl operation

Explanation: A binding error occurred during the requested ACL operation.

Action: Ensure that the object was specified correctly and retry.

0x17122017 sec_acl_cant_allocate_memory

Severity: Varies **Component:** sec

Text: acl operation unable to allocate memory

Explanation: Cannot allocate memory for requested operation.

Action: Check available system swap space and increase if necessary.

0x17122031 sec_acl_duplicate_entry

Severity: Varies **Component:** sec

Text: duplicate acl entry

Explanation: Duplicate ACL entries are not allowed.

Action: Remove duplicate entry and retry the operation.

0x170830a1 SEC_ACL_EDIT_PAD1

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT_PAD1

Explanation: ?

Action: None required

0x170830a2 SEC_ACL_EDIT_PAD2

Severity: Varies **Component:** sad

Text: SEC_ACL_EDIT_PAD2

Explanation: ?

Action: None required

0x170830a3 SEC_ACL_EDIT_PAD3

0x1712201e sec_acl_expected_group_obj

Severity: Varies **Component:** sec

Text: acl operation expected group_obj

Explanation: Object has an owning group but no group_obj entry in its ACL.

Action: Add a group_obj entry to the ACL, then retry the operation.

0x1712201d sec_acl_expected_user_obj

Severity: Varies **Component:** sec

Text: acl operation expected user_obj

Explanation: Object has an owner but no user_obj entry contained in its ACL.

Action: Add a user_obj entry to the ACL, then retry the operation.

0x1712202d sec_acl_invalid_acl_handle

Severity: Varies **Component:** sec

Text: invalid acl handle

Explanation: Internal error, should never occur.

Action: Notify DCE support personnel.

0x17122020 sec_acl_invalid_acl_type

Severity: Varies **Component:** sec

Text: acl type not valid

Explanation: Specified ACL type is out of the valid range for this type.

Action: Ensure that the specified ACL entry type is valid. If this error is encountered within the DCE base components, notify support personnel.

0x17122035 sec_acl_invalid_dfs_acl

Severity: Varies **Component:** sec

Text: not a valid DFS acl

Explanation: DFS ACL manager does not understand the specified ACL.

Action: Ensure that ACL is specified correctly and retry the operation.

0x17122028 sec_acl_invalid_entry_class

Severity: Varies **Component:** sec

Text: invalid acl entry class

Explanation: Obsolete.

Action: None required.

0x1712201c sec_acl_invalid_entry_name

Severity: Varies **Component:** sec

Text: invalid acl object name

Explanation: NULL or invalid entry name passed to sec_acl_bind() API.

Action: Ensure that client is specifying a valid name to sec_acl_bind(). If this error is encountered within the base DCE components, then notify support personnel.

0x1712201f sec_acl_invalid_entry_type

Severity: Varies **Component:** sec

Text: acl entry type not valid

Explanation: An ACL entry type was specified that the server does not understand. It is possible for this to occur if a client is attempting to pass new ACL entry types to an older server that cannot interpret them (eg: delegation ACL entry types).

Action: Ensure that ACL entries are of a type that the server can understand.

0x17122022 sec_acl_invalid_manager_type

Severity: Varies **Component:** sec

Text: acl manager type invalid

Explanation: Invalid ACL manager type specified.

Action: If this error is encountered in an application, then that app needs to be fixed to obtain the correct ACL manager type and specify that type. If this error is encountered within the DCE base components, then notify support personnel.

0x17122025 sec_acl_invalid_permission

Severity: Varies **Component:** sec

Text: permission not valid for this acl

Explanation: One or more specified permissions not valid for this ACL.

Action: Determine correct permissions and retry the operation.

0x17122018 sec_acl_invalid_site_name

Severity: Varies **Component:** sec

Text: invalid site name for acl operation

Explanation: The ACL operation specified an invalid site name.

Action: Retry operation with a valid site name.

0x1712202f sec_acl_mgr_file_open_error

Severity: Varies **Component:** sec

Text: acl manager file open error

Explanation: ACL manager unable to open database file on startup.

Action: Ensure that this software is installed correctly.

0x17122036 sec_acl_mgr_no_space

Severity: Varies **Component:** sec

Text: not enough space for this ACL at specified ACL manager

Explanation: ACL manager was not able to store the specified ACL.

Action: Ensure that there is adequate disk and swap space on the server system.

0x17122030 sec_acl_missing_required_entry

Severity: Varies **Component:** sec

Text: missing required acl entry

Explanation: ACL is missing an entry required by this ACL manager.

Action: Determine what entries are required for this type of object.

0x1712202a sec_acl_name_resolution_failed

Severity: Varies **Component:** sec

Text: name resolution failed on acl operation

Explanation: Name resolution failed on the requested ACL operation.

Action: Ensure that a valid object name was specified.

0x1712201b sec_acl_no_acl_found

Severity: Varies **Component:** sec

Text: no acl found

Explanation: Object found, but object has no ACL associated with it.

Action: Retry operation with object that has an ACL, or notify support personnel for the server in question if object should have an ACL.

0x17122027 sec_acl_no_owner

Severity: Varies **Component:** sec

Text: at least one control permission bit required on acl

Explanation: There must be at least one entry in the ACL that grants control over the ACL.

Action: Grant the control permission to at least one entry.

0x17122033 sec_acl_not_authorized

Severity: Varies **Component:** sec

Text: operation on acl not authorized

Explanation: Not authorized to perform the requested operation on this object.

Action: Identity with control rights to ACL should perform the operation.

0x17122016 sec_acl_not_implemented

Severity: Varies **Component:** sec

Text: acl operation not implemented

Explanation: Requested operation is not implemented in this version of DCE.

Action: Do not attempt this operation with this version of DCE.

0x1712202e sec_acl_no_update_sites

Severity: Varies **Component:** sec

Text: no update sites for this acl operation

Explanation: No update sites available for this ACL operation.

Action: Try again later, the update site may be currently unavailable.

0x1712201a sec_acl_object_not_found

Severity: Varies **Component:** sec

Text: acl object not found

Explanation: Specified ACL object was not found.

Action: Check to make sure the object was specified correctly.

0x17122023 sec_acl_read_only

Severity: Varies **Component:** sec

Text: acl operation is read only

Explanation: Unable to perform update operation on read only ACL data

Action: None required.

0x1712202b sec_acl_rpc_error

Severity: Varies **Component:** sec

Text: rpc error on acl operation

Explanation: An RPC error was returned during the ACL operation.

Action: Retry the operation.

0x17122034 sec_acl_server_bad_state

Severity: Varies **Component:** sec

Text: acl server state doesn't support operation

Explanation: Server is not in a state capable of performing the requested operation.

Action: Retry the operation. Notify system administrator if problem persists.

0x17122024 sec_acl_site_read_only

Severity: Varies **Component:** sec

Text: update acl operation not valid on a read only site

Explanation: Requested operation attempted at a read only site. This error should be trapped by the security ACL API and the operation should be resent to an update site automatically if one can be located.

Action: None required.

0x17122029 sec_acl_unable_to_authenticate

Severity: Varies **Component:** sec

Text: unable to authenticate on acl operation

Explanation: Attempt to authenticate to server controlling the object failed.

Action: Ensure that the client has valid DCE credentials.

0x17122019 sec_acl_unknown_manager_type

Severity: Varies **Component:** sec

Text: acl manager type not recognized

Explanation: Programming error, should not happen.

Action: Notify support personnel of the problem.

0x17122151 sec_attr_bad_acl_mgr_set

Severity: Varies **Component:** sec

Text: invalid acl_mgr_set specified

Explanation: Application specified an invalid acl manager set for this operation.

Action: Determine the correct acl manager set and retry the operation.

0x17122152 sec_attr_bad_acl_mgr_type

Severity: Varies **Component:** sec

Text: invalid acl manager type

Explanation: Application specified an invalid acl manager.

Action: Retry the operation with the appropriate acl manager type specified.

0x17122161 sec_attr_bad_bind_authn_svc

Severity: Varies **Component:** sec

Text: invalid authentication service specified in binding auth_info

Explanation: Application specified an invalid authentication service in the binding auth info for this operation.

Action: Retry the operation with correct authentication server specified.

0x17122162 sec_attr_bad_bind_authz_svc

Severity: Varies **Component:** sec

Text: invalid authorization service specified in binding auth_info

Explanation: Application specified an invalid authz_svc parameter in a request to the privilege server.

Action: Retry operation with correct authorization service specified.

0x17122153 sec_attr_bad_bind_info

Severity: Varies **Component:** sec

Text: invalid binding information

Explanation: Application specified invalid binding information in an attribute update operation.

Action: Determine correct binding information and retry operation.

0x17122160 sec_attr_bad_bind_prot_level

Severity: Varies **Component:** sec

Text: invalid protection level specified in binding auth_info

Explanation: Application specified an invalid protection level in the binding auth info.

Action: Retry operation with the correct protection level specified.

0x1712215f sec_attr_bad_bind_svr_name

Severity: Varies **Component:** sec

Text: invalid server name specified in binding auth_info

Explanation: Application specified an invalid server name in the binding auth info.

Action: Retry operation with correct binding auth info specified.

0x1712215a sec_attr_bad_comment

Severity: Varies **Component:** sec

Text: invalid comment text specified

Explanation: Attribute comment specified exceeds 1024 characters.

Action: Make comment conform to size restrictions and retry the operation.

0x17122163 sec_attr_bad_cursor

Severity: Varies **Component:** sec

Text: invalid cursor

Explanation: Application specified an invalid cursor.

Action: Specify a valid cursor and retry operation.

0x17122158 sec_attr_bad_encoding_type

Severity: Varies **Component:** sec

Text: invalid encoding type specified

Explanation: Attribute encoding type specified is invalid.

Action: Select a valid encoding type and retry operation.

0x1712215b sec_attr_bad_intercell_action

Severity: Varies **Component:** sec

Text: invalid intercell action specified

Explanation: Intercell action specified for an attribute must be one of: accept, reject or evaluate.

Action: Select the appropriate intercell action and retry the operation.

0x17122157 sec_attr_bad_name

Severity: Varies **Component:** sec

Text: invalid attribute name specified

Explanation: Attribute name specified is NULL or exceeds 1024 characters.

Action: Select an appropriate attribute name and retry the operation.

0x17122166 sec_attr_bad_object_type

Severity: Varies **Component:** sec

Text: operation not supported on this object type

Explanation: Application specified an acl manager type for this object that is not contained in the schema entry for this attribute.

Action: Retry operation with an acl manager type that is contained in the schema entry.

0x1712216d sec_attr_bad_param

Severity: Varies **Component:** sec

Text: bad parameter for schema or attribute operation

Explanation: Application specified a bad parameter for a schema or attribute operation.

Action: Verify the specified parameters and retry the operation.

0x17122154 sec_attr_bad_permset

Severity: Varies **Component:** sec

Text: invalid permission set

Explanation: Application specified one or more invalid permissions for this type of ACL.

Action: Ensure that permissions are specified correctly and retry the operation.

0x17122159 sec_attr_bad_scope

Severity: Varies **Component:** sec

Text: invalid scope specified

Explanation: Attribute scope specified exceeds 1024 characters.

Action: Select appropriate scope and retry the operation.

0x1712215c sec_attr_bad_trig_type

Severity: Varies **Component:** sec

Text: invalid trigger type specified

Explanation: Application specified a trigger type other than query in this operation. Only query triggers are supported in this release.

Action: If a query trigger can be used, retry the operation with the query trigger specified.

0x17122150 sec_attr_bad_type

Severity: Varies **Component:** sec

Text: invalid or unsupported attribute type

Explanation: Application performing a lookup using the specified attribute type was unsuccessful.

Action: Determine the correct attribute type and retry the operation.

0x1712215e sec_attr_bad_uniq_query_accept

Severity: Varies **Component:** sec

Text: invalid combination of unique_flag=true, query trigger, and intercell_action=accept

Explanation: If the unique flag is set to true, and a query trigger is used, the intercell action can not be set to accept.

Action: Retry the operation with the intercell action set to either reject or evaluate.

0x17122ebc sec_attr_cant_get_attrinst

Severity: Fatal **Component:** sec/sec_s_rs_rsdB

Text: failed to get next attr instance in seq list

Explanation: ?

Action: Log a defect.

0x17122eb9 sec_attr_cant_get_attrlist

Severity: Fatal **Component:** sec/sec_s_rs_rsdB

Text: unable to retrieve attr_list

Explanation: ?

Action: Log a defect.

0x17122ebb sec_attr_cant_get_instance

Severity: Fatal **Component:** sec/sec_s_rs_rsdB

Text: failed to get last attr in seq list

Explanation: ?

Action: Log a defect.

0x1712214f sec_attr_field_no_update

Severity: Varies **Component:** sec

Text: field not modifiable

Explanation: Application attempted to update a field that does not allow modification.

Action: Verify that the correct field was specified. If not, retry the operation with the correct field specified. If so, the update operation should not be attempted on this field.

0x17122148 sec_attr_inst_exists

Severity: Varies **Component:** sec

Text: attribute instance already exists

Explanation: Application specified a registry object that does not exist.

Action: Ensure that the object is specified correctly and that the caller is granted read access to the object.

0x17122144 sec_attr_inst_not_found

Severity: Varies **Component:** sec

Text: attribute instance not found

Explanation: Application specified an attribute instance that was not found.

Action: Specify the correct attribute, or make sure the attribute has been placed on the specified object and retry the operation.

0x17122173 sec_attr_multi_inst_disallowed

Severity: Varies **Component:** sec

Text: multi_instanced void attributes are disallowed.

Explanation: It is meaningless to have multi_instanced void attributes.

Action: None required.

0x17122170 sec_attr_multi_inst_no_update

Severity: Varies **Component:** sec

Text: can't update the multi_instanced flag from unset to set

Explanation: Schema multi instance flag cannot be unset.

Action: Add a new schema entry if multi instanced attributes are required.

0x1712214d sec_attr_name_exists

Severity: Varies **Component:** sec

Text: attribute name already exists

Explanation: Application attempted to add an attribute with a duplicate name to the registry.

Action: Retry operation with a unique attribute name.

0x17122155 sec_attr_no_memory

Severity: Varies **Component:** sec

Text: unable to allocate memory

Explanation: Unable to allocate memory.

Action: Check available system swap space and increase if necessary.

0x1712216c sec_attr_no_more_entries

Severity: Varies **Component:** sec

Text: no more entries (attribute instances or schema entries) found

Explanation: Application has exhausted the available attribute instance or schema entries.

Action: Application should handle this condition appropriately.

0x17122145 sec_attr_not_all_avail

Severity: Varies **Component:** sec

Text: warning: some of the requested attributes do not exist on the object

Explanation: Application requested attributes that do not exist on the specified object.

Action: This is a warning message - it is for informational purposes only.

0x17122164 sec_attr_not_implemented

Severity: Varies **Component:** sec

Text: this operation not implemented

Explanation: Application specified an operation that has not yet been implemented.

Action: The application must not make use of this operation.

0x17122167 sec_attr_not_multi_valued

Severity: Varies **Component:** sec

Text: this attribute type does not support multi-valued updates

Explanation: Application specified more than one attribute instance for a type that is not multi valued.

Action: Specify a single attribute instance for this type and retry the operation.

0x17122156 sec_attr_not_unique

Severity: Varies **Component:** sec

Text: attribute value is not unique

Explanation: Application specified a non-unique value for an attribute.

Action: Ensure that the attribute value is unique and retry the operation.

0x17122eba sec_attr_num_attr_ltzero

Severity: Fatal **Component:** sec/sec_s_rs_rsdh

Text: tried to decrement num_attrs below zero

Explanation: ?

Action: Log a defect.

0x17122172 sec_attr_qry_trig_bad_enc_type

Severity: Varies **Component:** sec

Text: updates of query trigger attributes must have encoding type void

Explanation: Attribute encoding type specified is invalid.

Action: Select a valid encoding type and retry operation.

0x17122147 sec_attr_rgy_obj_not_found

Severity: Varies **Component:** sec

Text: registry object not found

Explanation: Specified registry object was not found.

Action: Ensure that the object is specified correctly and that the caller is granted read access to the object.

0x17122edd sec_attr_schema_cant_lookup

Severity: Fatal **Component:** sec/sec_s_rs_rsdh

Text: Unable to lookup schema entry

Explanation: ?

Action: Log a defect.

0x17122edc sec_attr_schema_cant_reset

Severity: Fatal **Component:** sec/sec_s_rs_rsdh

Text: Unable to reset schema entry info

Explanation: ?

Action: Log a defect.

0x17122143 sec_attr_sch_entry_not_found

Severity: Varies **Component:** sec

Text: schema entry not found

Explanation: Application specified a schema entry that does not exist.

Action: Specify a valid schema entry and retry the operation.

0x1712216e sec_attr_sch_reserved

Severity: Varies **Component:** sec

Text: can't delete schema entry with reserved flag set

Explanation: Cannot delete schema entry with reserved flag set.

Action: None required

0x17122146 sec_attr_set_member_missing

Severity: Varies **Component:** sec

Text: warning: one or more members of the attribute set do not exist on the object

Explanation: Application requested an attribute set where one or more of the members do not exist on the object.

Action: This is a warning message - it is for informational purposes only.

0x1712214a sec_attr_svr_read_only

Severity: Varies **Component:** sec

Text: server is read only

Explanation: Application requested an update operation on a read only server.

Action: Retry update operation on the master server.

0x1712214b sec_attr_svr_unavailable

Severity: Varies **Component:** sec

Text: server is unavailable

Explanation: Application attempted to contact a server that is unavailable.

Action: Retry operation with another server or contact your DCE administrator to determine why the server is unavailable.

0x1712215d sec_attr_trig_bind_info_missing

Severity: Varies **Component:** sec

Text: trigger binding info must be specified

Explanation: Application specified a trigger without supplying binding info.

Action: Retry operation with trigger binding info specified.

0x17122165 sec_attr_trig_query_not_sup

Severity: Varies **Component:** sec

Text: query trigger not supported for this operation

Explanation: Application specified a query trigger for an operation that does not support query triggers.

Action: Retry operation without a query trigger specified.

0x1712214c sec_attr_trig_svr_unavailable

Severity: Varies **Component:** sec

Text: trigger server is unavailable

Explanation: Application specified a trigger server in this operation that is unavailable.

Action: Retry operation with another trigger server or contact your DCE administrator to determine why the trigger server is unavailable.

0x17122171 sec_attr_trig_types_no_update

Severity: Varies **Component:** sec

Text: can't update the trig_types flag

Explanation: Schema trigger types cannot be updated.

Action: None required.

0x1712214e sec_attr_type_id_exists

Severity: Varies **Component:** sec

Text: attribute type id already exists

Explanation: Application attempted to add an attribute with a duplicate id to the registry.

Action: Retry operation with a unique attribute id.

0x17122149 sec_attr_unauthorized

Severity: Varies **Component:** sec

Text: unauthorized to perform this operation

Explanation: The object's ACL denied the attempted operation.

Action: An identity that is granted the right to perform the requested operation must be used.

0x1712216f sec_attr_unique_no_update

Severity: Varies **Component:** sec

Text: can't update the unique flag from set to unset

Explanation: Schema unique flag cannot be unset.

Action: Add a new schema entry if non-unique attributes are required.

0x1712216b sec_attr_val_attr_set_bad

Severity: Varies **Component:** sec

Text: attribute value attr_set has bad format

Explanation: Application specified an improperly formatted attribute value set.

Action: Correct the format of the attribute value set and retry the operation.

0x1712216a sec_attr_val_bytes_bad

Severity: Varies **Component:** sec

Text: attribute value bytes/confidential_bytes/i18n_data has bad format

Explanation: Application specified improperly formatted bytes string.

Action: Correct the format of the bytes string and retry the operation.

0x17122168 sec_attr_val_printstring_bad

Severity: Varies **Component:** sec

Text: attribute value printstring has bad format

Explanation: Application specified a printstring value that exceeds 1024 characters.

Action: Retry operation with a printstring value that is 1024 or less.

0x17122169 sec_attr_val_string_array_bad

Severity: Varies **Component:** sec

Text: attribute value string array has bad format

Explanation: Application either specified an improperly formatted attribute value string array or one or more of the attribute value strings in the array exceed 1024 characters.

Action: Ensure that the string array is properly formed and that each of the attribute value strings are less than 1024 and retry the operation.

0x17122180 sec_authn_bad_cell_name

Severity: Varies **Component:** sec

Text: Cell name does not start with /.../

Explanation: All DCE cell names must start with /.../

Action: Correct the cell name found in dce_cf.db

0x1712217d sec_authn_s_bad_seal

Severity: Varies **Component:** sec

Text: integrity error: EPAC seal mismatch.

Explanation: Data corruption, or an attacker asserting credentials that don't match the credentials that were actually granted. If error is reproducible, then it's most likely a defect in DCE.

Action: Notify support personnel, if reproducible.

0x1712217b sec_authn_s_missing_epac

Severity: Varies **Component:** sec

Text: EPAC missing after authenticator

Explanation: Improperly formed RPC authentication protocol message, probably due to a defect in DCE.

Action: Notify support personnel.

0x1712217c sec_authn_s_no_seal

Severity: Varies **Component:** sec

Text: can't find appropriate seal for EPAC

Explanation: Improperly formed RPC authentication protocol message, probably due to a defect in DCE.

Action: Notify support personnel.

0x17122f60 sec_buf_too_small

Severity: Varies **Component:** sec

Text: Buffer too small

Explanation: The buffer size is smaller than the amount of data which needs to be copied into the buffer. This is an internal error.

Action: Log a defect.

0x17122dc8 sec_crdb_at_char_in_cellname

Severity: Fatal **Component:** sec/sec_s_rs_create_db

Text: Cell name %s cannot contain the @ character

Explanation: ?

Action: ?

0x17122dd8 sec_crdb_cant_add_replica

Severity: Fatal **Component:** sec/sec_s_rs_create_db

Text: Cannot add new replica to master registry\n%s

Explanation: ?

Action: ?

0x17122ddc sec_crdb_cant_bind_updsite

Severity: Fatal **Component:** sec/sec_s_rs_create_db

Text: Cannot locate and bind to master registry\n%s

Explanation: ?

Action: ?

0x17122ddd sec_crdb_cant_com_master

Severity: Fatal **Component:** sec/sec_s_rs_create_db

Text: Cannot communicate with master registry\n%s

Explanation: ?

Action: ?

0x17122dd3 sec_crdb_cant_create_celluuid

Severity: Fatal **Component:** sec/sec_s_rs_create_db

Text: Problem creating cell uuid\n%s

Explanation: ?

Action: ?

0x17122dd2 sec_crdb_cant_get_hostname

Severity: Fatal **Component:** sec/sec_s_rs_create_db

Text: Unable to retrieve host name\n%s

Explanation: ?

Action: ?

0x17122dd5 sec_crdb_cant_get_host_prname

Severity: Fatal **Component:** sec/sec_s_rs_create_db

Text: Unable to retrieve host principal name\n%s

Explanation: ?

Action: ?

0x17122dd7 sec_crdb_cant_register_ns

Text: Cannot register with nameservice\n%s

Explanation: ?

Action: ?

0x17122dd4 sec_crdb_cant_setup_rgycreator

Severity: Fatal **Component:** sec/sec_s_rs_create_db

Text: Problem setting up rgy_creator\n%s

Explanation: ?

Action: ?

0x17122dd9 sec_crdb_cant_upd_rgyst_file

Severity: Fatal **Component:** sec/sec_s_rs_create_db

Text: Cannot update rgy_state file\n%s

Explanation: ?

Action: ?

0x17122dd1 sec_crdb_cl_alt_dir_no_arg

Severity: Warning **Component:** sec/sec_s_rs_create_db

Text: No argument for alt_dir option. Using default path : %s

Explanation: No argument was specified for alt_dir . Hence a default path was used.

Action: None required.

0x17122dc9 sec_crdb_cl_bad_name

Severity: Fatal **Component:** sec/sec_s_rs_create_db

Text: Illegal name %s

Explanation: The specified name is not a legal CDS name.

Action: Provide the correct name

0x17122dca sec_crdb_cl_dup_option

Severity: Error **Component:** sec/sec_s_rs_create_db

Text: Both the options %s and %s specified.

Explanation: Only one of the two options may be used.

Action: Specify only one but not both options for sec_create_db.

0x17122dcd sec_crdb_cl_long_passwd

Severity: Error **Component:** sec/sec_s_rs_create_db

Text: default_passwd too long.

Explanation: Password longer than the permitted maximum.

Action: ?

0x17122dcc sec_crdb_cl_long_rgname

Severity: Error **Component:** sec/sec_s_rs_create_db

Text: Name specified with option %s longer than %d

Explanation: Registry name is longer than the permitted maximum.

Action: ?

0x17122dcb sec_crdb_cl_missing_arg

Severity: Error **Component:** sec/sec_s_rs_create_db

Text: Missing argument for %s option

Explanation: The specified option requires an argument which was not specified.

Action: Specify the missing argument for the given option.

0x17122dcf sec_crdb_cl_null_myname

Severity: Error **Component:** sec/sec_s_rs_create_db

Text: Missing myname

Explanation: The specified name is either NULL or a null string.

Action: Specify a non-NULL string for the option.

0x17122dce sec_crdb_cl_unknown_option

Severity: Error **Component:** sec/sec_s_rs_create_db

Text: Unknown command line option %s

Explanation: The specified option is not valid. Consult the manual page for the correct set of options.

Action: Run the command again with correct options.

0x17122dd0 sec_crdb_cl_usage

Explanation: The security replica has not successfully registered with the nameservice

Action: ?

0x17122dc0 sec_crdb_site_file_create_fail

Severity: Warning **Component:** sec/sec_s_rs_create_db

Text: pe_site file not created

Explanation: The pe_site file could not be created or updated because of an error. The error is logged prior to this message.

Action: ?

0x17122dc1 sec_crdb_site_file_create_succ

Severity: Notice **Component:** sec/sec_s_rs_create_db

Text: pe_site file created

Explanation: The pe_site file has been successfully created. This is an informational message.

Action: None required.

0x17122dc3 sec_crdb_site_file_upd_fail

Severity: Notice **Component:** sec/sec_s_rs_create_db

Text: RPC string bindings not appended to pe_site file

Explanation: RPC bindings could not be appended to the pe_site file. The messages logged prior to this indicate why this might have happened.

Action: None required.

0x17122dc2 sec_crdb_site_file_upd_succ

Severity: Notice **Component:** sec/sec_s_rs_create_db

Text: RPC String bindings appended to pe_site file

Explanation: RPC bindings have been successfully appended to the pe_site file. This is an informational message.

Action: None required.

0x17122132 sec_cred_s_authz_cannot_comply

Severity: Varies **Component:** sec

Text: authz service cannot supply the requested credentials

Explanation: Application programming error. The server is asking for information that the authorization service used for the call cannot supply (eg, calling sec_cred_get_initiator() when the call had used authz_name).

Action: Fix application code. Check the authorization service used before attempting to extract credentials.

0x1712212f sec_cred_s_invalid_auth_handle

Severity: Varies **Component:** sec

Text: invalid credential handle

Explanation: Specified credential handle is invalid.

Action: This is most likely a programming error that needs to be fixed.

0x17122131 sec_cred_s_invalid_cursor

Severity: Varies **Component:** sec

Text: invalid credential cursor

Explanation: Specified credential cursor is invalid.

Action: This is most likely a programming error that needs to be fixed.

0x17122133 sec_cred_s_invalid_key

Severity: Varies **Component:** sec

Text: rock key is not valid

Explanation: rock key may not be initialized.

Action: None required.

0x17122130 sec_cred_s_invalid_pa_handle

Severity: Varies **Component:** sec

Text: invalid privilege attribute handle

Explanation: Specified privilege attribute handle is invalid.

Action: This is most likely a programming error that needs to be fixed.

0x17122134 sec_cred_s_key_not_found

Severity: Varies **Component:** sec

Text: rock key not found

Explanation: ?

Action: None required.

0x1712212e sec_cred_s_no_more_entries

Severity: Varies **Component:** sec

Text: no more entries available

Explanation: No more entries available (informational status code).

Action: Don't try to obtain any more entries.

0x17122135 sec_cred_s_no_more_key

Severity: Varies **Component:** sec

Text: the only allowed rock key has been used

Explanation: ?

Action: None required.

0x171220d5 sec_id_e_bad_cell_uuid

Severity: Varies **Component:** sec

Text: Cell UUID does not correspond to a valid cell name

Explanation: Specified cell UUID does not match any known cell names.

Action: Ensure that a known cell UUID is specified.

0x171220d6 sec_id_e_foreign_cell_referral

Severity: Varies **Component:** sec

Text: Global name yields a principal in foreign cell, use referral

Explanation: Global name yields a principal in foreign cell, use referral

Action: None required.

0x171220d4 sec_id_e_name_too_long

Severity: Varies **Component:** sec

Text: Name is too long for current implementation

Explanation: The specified name is too long for the current implementation.

Action: Ensure that a valid name is specified.

0x171220d7 sec_id_e_no_at_hack

Severity: Varies **Component:** sec

Text: cannot obtain uuids of name in princ@cell form.

Explanation: ?

Action: None required.

0x17122044 sec_key_mgmt_e_authn_invalid

Severity: Varies **Component:** sec

Text: The authentication service is invalid

Explanation: The specified authentication service is invalid for this operation.

Action: Ensure that a valid authentication service is specified.

0x17122045 sec_key_mgmt_e_auth_unavailable

Severity: Varies **Component:** sec

Text: The authentication service is unavailable

Explanation: Unable to contact the authentication service.

Action: Notify a system administrator.

0x1712204a sec_key_mgmt_e_keytab_not_found

Severity: Varies **Component:** sec

Text: Specified key table not found

Explanation: Unable to locate or open specified key table.

Action: Ensure that a valid key table is specified.

0x17122043 sec_key_mgmt_e_key_unavailable

Severity: Varies **Component:** sec

Text: Requested key is unavailable

Explanation: No key matching specified principal and key version found in keytable.

Action: Ensure that the specified keytable is set up correctly.

0x17122047 sec_key_mgmt_e_key_unsupported

Severity: Varies **Component:** sec

Text: A requested key type is not supported

Explanation: A key with a type unknown to this version of DCE was specified.

Action: Ensure that operation was specified correctly.

0x17122048 sec_key_mgmt_e_key_version_ex

Severity: Varies **Component:** sec

Text: Specified key already exists in key store

Explanation: Specified key already exists in the specified key table.

Action: None required.

0x1712204b sec_key_mgmt_e_ktfile_err

Severity: Varies **Component:** sec

Text: Specified file is not a valid key table

Explanation: File found, but format does not conform to that of a key table.

Action: Ensure that a valid key table is specified.

0x17122049 sec_key_mgmt_e_not_implemented

Severity: Varies **Component:** sec

Text: Operation Not Implemented

Explanation: Specified operation not implemented in this version of DCE.

Action: Do not attempt this operation with this version of DCE.

0x17122046 sec_key_mgmt_e_unauthorized

Severity: Varies **Component:** sec

Text: The caller is unauthorized to perform operation

Explanation: The caller is unauthorized to perform the requested operation.

Action: Determine which identities have rights to perform the operation.

0x17122cc4 sec_lksm_bad_input

Severity: Varies **Component:** sec

Text: Bad input. Try again

Explanation: The user supplied response to the question of whether a locksmith account should be created is not correct.

Action: None required.

0x17122cc5 sec_lksm_create_acct

Severity: Varies **Component:** sec

Text: Account for %s doesn't exist. Should this be created ?

Explanation: This will be followed by the message in sec_lksm_def_yes_prompt.

Action: None required.

0x17122cc3 sec_lksm_def_no_prompt

Severity: Varies **Component:** sec

Text: [y/n]? (n)

Explanation: If security server is started in the locksmith mode and no locksmith account exists, then the user is prompted asking whether the account should be created. This prompt is used when the default is to not to create the the locksmith account.

Action: None required.

0x17122cc2 sec_lksm_def_yes_prompt

Severity: Varies **Component:** sec

Text: [y/n]? (y)

Explanation: If security server is started in the locksmith mode and no locksmith account exists, then the user is prompted asking whether the account should be created. This prompt is used when the desired default is to create the locksmith account.

Action: None required.

0x17122ccf sec_lksm_passwd_prompt

Severity: Varies **Component:** sec

Text: Enter password for locksmith account:

Explanation: ?

Action: None required.

Explanation: ?

Action: None required.

0x17122cce sec_lksm_set_polpwd_expire

Severity: Varies **Component:** sec

Text: Setting policy password lifetime to %d minutes\n

Explanation: ?

Action: None required.

0x17122ccd sec_lksm_set_polpwd_expire_now

Severity: Varies **Component:** sec

Text: Setting policy password expiration time to %d minutes from now\n

Explanation: ?

Action: None required.

0x17122cc6 sec_lksm_set_pwd_valid

Severity: Varies **Component:** sec

Text: Setting password valid flag for %s account\n

Explanation: Setting password valid flag for the specified account.

Action: None required.

0x17122cc8 sec_lksm_set_server_valid

Severity: Varies **Component:** sec

Text: Setting account admin flag to allow %s account to be a server\n

Explanation: ?

Action: None required.

0x17122ea3 sec_logent_out_of_bounds

Severity: Warning **Component:** sec/sec_s_rs_rsdh

Text: Log entry out of bounds and so skipped

Explanation: ?

Action: None required.

0x171220f6 sec_login_s_acct_invalid

Severity: Varies **Component:** sec

Text: account not valid for login

Explanation: Attempted to login to an account that is currently disabled.

Action: Have an administrator enable the account for login.

0x171220ef sec_login_s_already_valid

Severity: Varies **Component:** sec

Text: login context has already been validated

Explanation: Attempted to validate an already valid login context.

Action: Don't attempt to validate an already valid login context.

0x171220e9 sec_login_s_auth_local

Severity: Varies **Component:** sec

Text: Operation not valid on local context

Explanation: ?

Action: None required.

0x17122100 sec_login_s_compound_delegate

Severity: Varies **Component:** sec

Text: Login context already specifies a delegation chain.

Explanation: Attempted to call become_initiator with a login context that already contained a delegation chain.

Action: Do not attempt to become an initiator if already a delegate.

0x171220f3 sec_login_s_config

Severity: Varies **Component:** sec

Text: host configuration info not available

Explanation: ?

Action: None required.

0x171220eb sec_login_s_context_invalid

Severity: Varies **Component:** sec

Text: Context has not been validated

Explanation: Attempted to use a not-yet-validated login context for an operation that requires a validated context.

Action: This is most likely a programming error that needs to be fixed.

0x171220f0 sec_login_s_default_use

Severity: Varies **Component:** sec

Text: illegal use of default sec login handle

Explanation: ?

Action: None required.

0x17122102 sec_login_s_deleg_not_enabled

Severity: Varies **Component:** sec

Text: Delegation has not been enabled.

Explanation: Delegation/impersonation attempted, but initiator did not enable it.

Action: Server must not use delegation/impersonation, or initiator must enable it.

0x171220ed sec_login_s_groupset_invalid

Severity: Varies **Component:** sec

Text: Groupset not valid

Explanation: ?

Action: None required.

0x171220ea sec_login_s_handle_invalid

Severity: Varies **Component:** sec

Text: Context handle not valid

Explanation: Specified login handle does not correspond to a login context.

Action: This is most likely a programming error that needs to be fixed.

0x171220fe sec_login_s_incomplete_ovrd_ent

Severity: Varies **Component:** sec

Text: Incomplete override entry, cannot proceed.

Explanation: Override entry for this entry encountered, with password field specified, but other necessary field(s) missing.

Action: Have an administrator fix the override entry for this account.

0x171220ee sec_login_s_info_not_avail

Severity: Varies **Component:** sec

Text: Information not available

Explanation: ?

Action: None required.

0x171220f4 sec_login_s_internal_error

Severity: Varies **Component:** sec

Text: internal error in sec_login

Explanation: Internal error, should not occur.

Action: Notify support personnel.

0x17122101 sec_login_s_invalid_compat_mode

Severity: Varies **Component:** sec

Text: Invalid compatibility mode selection.

Explanation: Specified compatibility mode is not supported.

Action: Specify a valid compatibility mode.

0x171220ff sec_login_s_invalid_deleg_type

Severity: Varies **Component:** sec

Text: Invalid delegation type selection.

Explanation: Specified delegation type is not supported.

Action: Specify a valid delegation type.

0x171220fd sec_login_s_invalid_password

Severity: Varies **Component:** sec

Text: Invalid password.

Explanation: The specified password is invalid.

Action: Specify a valid password.

0x171220ec sec_login_s_no_current_context

Severity: Varies **Component:** sec

Text: No currently established network identity for which context exists

Explanation: Login context is no longer completely accessible.

Action: Ensure that credential files for the specified login context have not been deleted.

0x171220f9 sec_login_s_no_identity

Severity: Varies **Component:** sec

Text: no identity supplied

Explanation: ?

Action: None required.

0x171220e8 sec_login_s_no_memory

Severity: Varies **Component:** sec

Text: No memory available

Explanation: Unable to allocate memory.

Action: Check available system swap space and increase if necessary.

0x171220f5 sec_login_s_no_override_info

Severity: Varies **Component:** sec

Text: no override information available

Explanation: No override information is currently available.

Action: None required.

0x171220f2 sec_login_s_not_certified

Severity: Varies **Component:** sec

Text: login context has not been certified

Explanation: Warning only. Information was obtained from a login context that has been validated but not certified.

Action: None required if certification is not desired for this data.

0x171220e7 sec_login_s_not_implemented

Severity: Varies **Component:** sec

Text: Operation not yet implemented

Explanation: Specified operation is not yet implemented in this version of DCE.

Action: Do not attempt the specified operation with this version of DCE.

0x171220f7 sec_login_s_null_password

Severity: Varies **Component:** sec

Text: cannot log in with zero-length password

Explanation: Cannot log in with a zero length password.

Action: Specify a valid password for login.

0x171220fb sec_login_s_override_failure

Severity: Varies **Component:** sec

Text: Unable to determine if override exists

Explanation: Unable to determine if any override information exists, so operation must be denied.

Action: Ensure that password override information is accessible to sec_clientd or dced/secval.

0x171220fc sec_login_s_ovrd_ent_not_found

Severity: Varies **Component:** sec

Text: No matching override entry found.

Explanation: No matching override entry found (informational status code).

Action: None required.

0x17122103 sec_login_s_preauth_failed

Severity: Varies **Component:** sec

Text: Preauthentication failure.

Explanation: The client is unable to compose the necessary preauthentication data for this principal.

Action: Contact a system administrator.

0x171220f1 sec_login_s_privileged

Severity: Varies **Component:** sec

Text: privileged operation invoked in unprivileged process

Explanation: Privilege operation was attempted in an unprivileged (non-root) process.

Action: Only attempt this operation in a privileged (root, uid 0) process.

0x171220fa sec_login_s_refresh_ident_bad

Severity: Varies **Component:** sec

Text: identity to be refreshed is no longer valid

Explanation: Attempted to refresh credentials for an account that is no longer valid.

Action: Cannot perform this operation.

0x17122105 sec_login_s_unix_id_overflow

Severity: Varies **Component:** sec

Text: The UNIX ID obtained from DCE is larger than supported by this OS.

Explanation: The UNIX ID obtained from DCE is larger than supported by this OS.

Action: Contact a system administrator.

0x171220f8 sec_login_s_unsupp_passwd_type

Severity: Varies **Component:** sec

Text: unsupported password type.

Explanation: Attempted to login using an unsupported password type.

Action: Specify a valid password and password type for login.

0x17122119 sec_lrgy_s_cannot_create

Severity: Varies **Component:** sec

Text: cannot create local registry

Explanation: Unable to create local registry files.

Action: Administrator should ensure that local registry files can be created by the login programs.

0x1712211b sec_lrgy_s_internal_error

Severity: Varies **Component:** sec

Text: internal local registry error

Explanation: Internal error, should not occur.

Action: Notify support personnel.

0x17122117 sec_lrgy_s_max_lt_num_entries

Severity: Varies **Component:** sec

Text: max_entries must be at least as large as num_entries

Explanation: User specified a max entry value smaller than current number of entries.

Action: Specify a maximum number of entries that is at least as large as the current number of local registry entries.

0x1712211a sec_lrgy_s_no_access

Severity: Varies **Component:** sec

Text: cannot access local registry

Explanation: Local registry exists, but cannot be accessed.

Action: Administrator should ensure that login programs are able to access the local registry files.

0x1712211c sec_lrgy_s_no_matching_entry

Severity: Varies **Component:** sec

Text: no matching local registry account entry

Explanation: No matching local registry account entry (informational status code).

Action: None required.

0x1712211d sec_lrgy_s_no_matching_tgt

Severity: Varies **Component:** sec

Text: no matching local registry TGT entry

Explanation: No matching local registry TGT entry (informational status code).

Action: None required.

0x1712211e sec_lrgy_s_no_more_entries

Severity: Varies **Component:** sec

Text: no more entries available

Explanation: End of local registry entries.

Action: None required. Don't try to read any more entries.

0x17122118 sec_lrgy_s_not_found

Severity: Varies **Component:** sec

Text: cannot find local registry

Explanation: No local registry files found.

Action: Administrator should ensure that local registry files can be created by the login programs.

0x17122f2c sec_ns_import_begin

Severity: Notice **Component:** sec/sec_s_rgybind

Text: Attempting to import RPC bindings from %s

Explanation: ?

Action: None required.

0x17122f2e sec_ns_import_done

Severity: Notice **Component:** sec/sec_s_rgybind

Text: Completed importing of RPC bindings from %s

Explanation: ?

Action: None required.

0x17122f2d sec_ns_import_next

Severity: Notice **Component:** sec/sec_s_rgybind

Text: Attempting to import next RPC binding from %s

Explanation: ?

Action: None required.

0x17122189 sec_pk_e_cell_too_long

Severity: Fatal **Component:** sec/sec_s_pubkey

Text: target cell name too long for cache file

Explanation: Attempting to retrieve the public key for the KDC of a cell whose cell name is too long to create a cache file name.

Action: Configure and use a shorter cell name alias.

0x17122183 sec_pk_e_domain_unsupported

Severity: Fatal **Component:** sec/sec_s_pubkey

Text: Public key domain not supported for this operation.

Explanation: The specified public key domain is not supported for this operation.

Action: Login from another node with support for the DCE Login domain; or use a valid public key domain; or use a valid operation for the specified domain.

0x17122187 sec_pk_e_key_attr_read_failed

Severity: Fatal **Component:** sec/sec_s_pubkey

Text: Public key attribute read failed.

Explanation: The value of at least one public key was not read successfully.

Action: Make sure the principal has a public key (DCEPKAuthentication ERA or DCEPKKeyEncipherment ERA) attached; make sure sec.1.2.2 has been enabled in the principal's cell; make sure the DCEPK ERA schema entries have not been modified.

0x17122186 sec_pk_e_key_vers_unavailable

Severity: Fatal **Component:** sec/sec_s_pubkey

Text: Key version requested not found.

Explanation: Specified key version was not found.

Action: Request available key using version 0, or request version of key that exists.

0x17122185 sec_pk_e_key_vers_unsupported

Severity: Fatal **Component:** sec/sec_s_pubkey

Text: Key version not supported.

Explanation: For sec_pubkey_store, the key version must be between 1 and 255; for sec_pubkey_retrieve, the version number must be between 0 and 255.

Action: Call sec_pubkey interfaces with kvno set to valid value.

0x1712218f sec_pk_e_kf_format_err

Severity: Fatal **Component:** sec/sec_s_pubkey

Text: Keyfile not recognized.

Explanation: The keyfile is not a valid public or private key keyfile.

Action: Check file pathname; be sure file is created with correct format (header, version).

0x1712218c sec_pk_e_kf_open_err

Severity: Fatal **Component:** sec/sec_s_pubkey

Text: Error opening the keyfile.

Explanation: Specified keyfile could not be opened.

Action: Create keyfile or supply correct keyfile pathname.

0x1712218b sec_pk_e_kf_param_not_alloc

Severity: Fatal **Component:** sec/sec_s_pubkey

Text: Return parameters NULL

Explanation: The value of a return parameter was null. Return parameters must point to pre-allocated structures.

Action: Allocate the structure for the return value and pass its address to the function.

0x1712218d sec_pk_e_kf_read_err

Severity: Fatal **Component:** sec/sec_s_pubkey

Text: Error reading the keyfile.

Explanation: Specified keyfile could not be read.

Action: Re-create keyfile or supply correct keyfile pathname; verify permissions on keyfile.

0x17122190 sec_pk_e_kf_version_err

Severity: Fatal **Component:** sec/sec_s_pubkey

Text: Keyfile version not supported.

Explanation: The keyfile version is not supported.

Action: Create keyfile with current software.

0x1712218e sec_pk_e_kf_write_err

Severity: Fatal **Component:** sec/sec_s_pubkey

Text: Error writing the keyfile.

Explanation: Specified keyfile could not be written.

Action: Supply correct keyfile pathname; create path leading to keyfile; verify permissions on keyfile.

0x1712218a sec_pk_e_no_key_value

Severity: Fatal **Component:** sec/sec_s_pubkey

Text: the public key value is NULL

Explanation: Attempting to store a public key whose value is NULL.

Action: Use a valid public key value.

0x17122188 sec_pk_e_no_memory

Severity: Fatal **Component:** sec/sec_s_pubkey

Text: Insufficient memory for public key operation.

Explanation: Insufficient memory for public key operation.

Action: Install more memory.

0x17122191 sec_pk_e_rsdb_keystore_err

Severity: Fatal **Component:** sec/sec_s_pubkey

Text: Failed to register the rsdb keystore.

Explanation: Error registering the private key keystore mechanism for the krbtgt key.

Action: Ensure libdce is compatible with secd.

0x17122184 sec_pk_e_usage_unsupported

Severity: Fatal **Component:** sec/sec_s_pubkey

Text: Public key usage type not supported.

Explanation: The specified public key usage type is not supported.

Action: Login from another node with support for the user's public key login keys, or use a supported public key usage type.

0x17122193 sec_pk_login_client_fail

Severity: Notice **Component:** sec/sec_s_pubkey

Text: Could not acquire public key credentials: %s in %s

Explanation: A failure was detected while the client was attempting to obtain credentials using public key login protocols

Action: Make a public key available to the client and known to the KDC

0x15f62011 sec_pkss_pipe_decrypt_fail

Severity: Error **Component:** pks/pks_s_pipe

Text: Error decrypting data from pipe (%x).

Explanation: Error returned from crypto routine

Action: Submit a problem report

0x15f62010 sec_pkss_pipe_encrypt_fail

Severity: Error **Component:** pks/pks_s_pipe

Text: Error encrypting for pipe (%x)

Explanation: Error returned from crypto routine

Action: Submit a problem report

0x17122063 sec_priv_s_bad_compat_mode

Severity: Varies **Component:** sec

Text: invalid compatibility mode

Explanation: An out of range compat mode parameter was passed to the privilege server.

Action: Notify support personnel.

0x17122064 sec_priv_s_bad_deleg_type

Severity: Varies **Component:** sec

Text: invalid delegation type

Explanation: Specified delegation type is not valid.

Action: Ensure that a valid delegation type is specified.

0x1712206c sec_priv_s_cmode_not_enabled

Severity: Varies **Component:** sec

Text: Requested compatibility mode has not been enabled

Explanation: Delegate attempted to specify a compatibility mode not allowed by initiator.

Action: Server should not attempt to specify this compatibility mode unless the initiator allows it.

0x17122067 sec_priv_s_corrupt_deleg_chain

Severity: Varies **Component:** sec

Text: delegation chain is corrupt

Explanation: Internal error, should not occur.

Action: Notify support personnel.

0x17122065 sec_priv_s_deleg_not_enabled

Severity: Varies **Component:** sec

Text: delegation not enabled

Explanation: Delegation attempted, but not enabled by initiator of operation.

Action: Don't attempt to become a delegate, or set up initiator correctly.

0x17122066 sec_priv_s_deleg_token_exp

Severity: Varies **Component:** sec

Text: delegation token has expired

Explanation: Delegation operation attempted, but delegation token has expired.

Action: Initiator or previous delegate(s) must refresh credentials before the operation can be performed.

0x17122069 sec_priv_s_intercell_deleg_req

Severity: Varies **Component:** sec

Text: privilege service delegation requests cannot cross cell boundaries

Explanation: Intercell delegation requests are not yet supported.

Action: Do not attempt to perform this delegation request across cell boundaries.

0x1712205e sec_priv_s_invalid_authn_svc

Severity: Varies **Component:** sec

Text: authentication service invalid

Explanation: Invalid authn_svc parameter in request to privilege server.

Action: Notify support personnel.

0x1712205f sec_priv_s_invalid_authz_svc

Severity: Varies **Component:** sec

Text: authorization service invalid

Explanation: Invalid authz_svc parameter in request to privilege server.

Action: Notify support personnel.

0x17122068 sec_priv_s_invalid_dlg_token

Severity: Varies **Component:** sec

Text: malformed delegation token

Explanation: Internal error, should not occur.

Action: Notify support personnel.

0x1712205b sec_priv_s_invalid_principal

Severity: Varies **Component:** sec

Text: invalid principal

Explanation: The principal requesting privileges is not valid. Could be caused by a race condition where the principal was just deleted, or could be caused by a defect in DCE.

Action: Ensure that the requesting principal exists. If so, and the error still occurs, notify support personnel.

0x1712206b sec_priv_s_invalid_protect_lvl

Severity: Varies **Component:** sec

Text: protocol level invalid

Explanation: Privilege client code passed in an invalid protection level.

Action: Notify support personnel.

0x17122061 sec_priv_s_invalid_request

Severity: Varies **Component:** sec

Text: malformed request

Explanation: Invalid request probably caused by defect in DCE, or corrupted data passed in.

Action: Notify support personnel.

0x1712206a sec_priv_s_invalid_server_name

Severity: Varies **Component:** sec

Text: Wrong priv server name

Explanation: Privilege client code passed in an invalid server name.

Action: Notify support personnel.

0x17122060 sec_priv_s_invalid_trust_path

Severity: Varies **Component:** sec

Text: trust path invalid

Explanation: The intercell authentication path traversed to authenticate to the DCE privilege server does not conform to the requirements for hierarchical trust in DCE.

Action: May need to reorganize the hierarchy of cells to conform to trust requirements.

0x1712205d sec_priv_s_no_mem

Severity: Varies **Component:** sec

Text: can't allocate memory

Explanation: Unable to allocate memory for specified operation.

Action: Check available system swap space and increase if necessary.

0x1712205c sec_priv_s_not_member_any_group

Severity: Varies **Component:** sec

Text: not member of any group

Explanation: Principal isn't a member of any of the groups it requested for its groupset. Most likely caused by a principal's group membership being changed since they logged in.

Action: Log out and log back in, or use kinit to refresh credentials.

0x1712205a sec_priv_s_server_unavailable

Severity: Varies **Component:** sec

Text: priv server unavailable

Explanation: Unable to locate an accessible privilege server.

Action: Retry the operation.

0x17122e43 sec_prop_bad_type

Severity: Error **Component:** sec/sec_s_rs_prop

Text: Bad propagation type.

Explanation: Internal error.

Action: Log a defect.

0x17122e47 sec_prop_chk_prop_slave_init

Severity: Notice **Component:** sec/sec_s_rs_prop

Text: Attempting to check slave initialization

Explanation: Check how slave initialization is going

Action: None required.

0x17122e45 sec_prop_fail

Severity: Notice **Component:** sec/sec_s_rs_prop

Text: Propagation failed : %s

Explanation: The update did not propagate successfully.

Action: Security server attempts to recover from this error. ??? It is not clear what the action should be. Or if eventually an ERROR message will be logged.

0x17122e42 sec_prop_no_master_info

Severity: Error **Component:** sec/sec_s_rs_prop

Text: Unable to get information about master

Explanation: Propagation thread tried but could not obtain information about the current master security server in the cell. This is an internal error.

Action: Log a defect.

0x17122e40 sec_prop_no_prop_thrs

Severity: Error **Component:** sec/sec_s_rs_prop

Text: Propagation threads not created

Explanation: The security server creates several propagation threads to manage the propagation of updates between the master and slave security servers. This error indicates that one or more such threads have not been created.

Action: Log a defect.

0x17122e41 sec_prop_not_master

Severity: Error **Component:** sec/sec_s_rs_prop

Text: Attempting to start propagation threads in a slave

Explanation: Propagation threads can only be created in a master security server not in a slave security server. This is an internal error.

Action: Log a defect.

0x17122e4c sec_prop_propq_clean_fail

Severity: Error **Component:** sec/sec_s_rs_prop

Text: Cleanup of propogation queue failed.\n%s

Explanation: An attempt to clean old entries from the prop queue failed.

Action: ?

0x17122e4a sec_prop_send_delete_rep

Action: None required

0x17122e83 sec_rep_adopt_sw_rev_fatal

Severity: Fatal **Component:** sec/sec_s_rs_rep

Text: Fatal error adopting new software version (%d)\nCurrent sw version = (%d):
status = %s

Explanation: An attempt to adopt a new software version failed due to an internal error condition that cannot be corrected dynamically. The most common causes of such a failure are an inability to register (or unregister) the remote interfaces needed (or no longer needed) to support the new software version. Examine the error status included in the output to determine the exact cause of failure.

Action: Ensure that the endpoint map service is running on the server host and reboot the security server. If the replica in question is the master, issue the administrative command to set the new software version. If the replica is a slave, there is no need to issue the administrative command—the master will force the slave to adopt the new software version as soon as the slave comes back on line.

0x17122e82 sec_rep_cant_get_sw_rev_fatal

Severity: Fatal **Component:** sec/sec_s_rs_rep

Text: Error retrieving current software version \n%s

Explanation: An internal attempt to retrieve the current software version from a replica's master info failed in a context in which such a failure is fatal.

Action: Save the serviceability log and core file and notify DCE support personnel of the problem.

0x17122cd9 sec_res_attr_sch_add_err

Severity: Error **Component:** sec/sec_s_rs

Text: Error adding an entry to the attribute schema

Explanation: ?

Action: ?

0x17122cd3 sec_res_host_key_set_err

Severity: Error **Component:** sec/sec_s_rs

Text: Error setting local host's key

Explanation: ?

Action: Try deleting old entry (this was hardcoded in the text)

0x17122cd7 sec_res_mem_add_err

Severity: Error **Component:** sec/sec_s_rs

Text: Error adding a member

Explanation: ?

Action: ?

0x17122cd6 sec_res_pgo_add_err

Severity: Error **Component:** sec/sec_s_rs

Text: Error adding a person/group/org entry

Explanation: ?

Action: ?

0x17122cda sec_res_pk_attr_sch_add_err

Severity: Error **Component:** sec/sec_s_rs

Text: Error adding an entry to the PK attribute schema

Explanation: ?

Action: ?

0x17122cd4 sec_res_princ_cvt_err

Severity: Error **Component:** sec/sec_s_rs

Text: Error converting cell name to local realm principal

Explanation: ?

Action: ?

0x17122cd5 sec_res_uuid_cvt_err

Severity: Error **Component:** sec/sec_s_rs

Text: Error converting cell uuid to string

Explanation: ?

Action: ?

0x17122d14 sec_rgy_acl_init

Severity: Fatal **Component:** sec/sec_s_rs_main

Text: Cannot initialize ACL manager\n%s

Explanation: Initializing for sec_acl wire interface failed.

Action: ?

0x17122096 sec_rgy_alias_not_allowed

Severity: Varies **Component:** sec

Text: Cant add alias for this name or principal (e.g. krbtgt)

Explanation: Attempted to add an alias to a principal which prohibits that operation.

Action: Do not attempt to add an alias for this principal.

0x17122d0d sec_rgy_aud_open

Severity: Fatal **Component:** sec/sec_s_rs_main

Text: Cannot open audit trail\n%s

Explanation: Fail to open dce audit file

Action: Check auditing setup, e.g. ENV or audit tail file

0x17122d18 sec_rgy_auth_init

Severity: Fatal **Component:** sec/sec_s_rs_main

Text: Cannot register auth info\n%s

Explanation: Cannot register server's authentication information with RPC runtime

Action: ?

0x17122083 sec_rgy_bad_alias_owner

Severity: Varies **Component:** sec

Text: PGO alias entry has an invalid owner

Explanation: PGO alias entry has an invalid owner

Action: None required.

0x17122097 sec_rgy_bad_chksum_type

Severity: Varies **Component:** sec

Text: Checksum type not supported

Explanation: Internal error, should not occur.

Action: Notify support personnel.

0x17122084 sec_rgy_bad_data

Severity: Varies **Component:** sec

Text: Invalid data record

Explanation: Invalid data encountered during specified registry operation.

Action: Ensure proper data is being passed by the client.

0x17122074 sec_rgy_bad_domain

Severity: Varies **Component:** sec

Text: Operation not supported on specified domain

Explanation: Attempted an operation that is not supported by the specified domain.

Action: Ensure that the correct domain is used for the operation.

0x1712209d sec_rgy_bad_handle

Severity: Varies **Component:** sec

Text: bad security context handle

Explanation: Internal error, should not occur.

Action: Notify support personnel.

0x17122098 sec_rgy_bad_integrity

Severity: Varies **Component:** sec

Text: Data integrity error

Explanation: Data integrity error. Could be caused by specifying invalid password.

Action: Ensure correct password is specified.

0x17122088 sec_rgy_bad_name

Severity: Varies **Component:** sec

Text: Illegal PGO or directory name

Explanation: Illegal name (possibly illegal character(s)) passed to the sec_rgy API.

Action: Ensure application is passing a valid name to the sec_rgy API. If this error is encountered within the DCE base components, then notify support personnel.

0x171220a3 sec_rgy_bad_nameservice_name

Severity: Varies **Component:** sec

Text: Invalid nameservice name

Explanation: Internal error.

Action: Notify support personnel.

0x17122eab sec_rgy_bad_rgy_db

Severity: Error **Component:** sec/sec_s_rs_rsdB

Text: Bad rgy database state.

Explanation: ?

Action: sec_create_db probably failed. Try rerunning it

0x17122093 sec_rgy_bad_scope

Severity: Varies **Component:** sec

Text: scope doesn't name existing directory or pgo

Explanation: Attempted to set scope to a name that does not exist in the registry.

Action: Ensure that a valid name is used for scope operation.

0x17122085 sec_rgy_cant_allocate_memory

Severity: Varies **Component:** sec

Text: Unable to allocate memory

Explanation: Unable to allocate memory for the specified operation.

Action: Check available system swap space and increase if necessary.

0x17122095 sec_rgy_cant_authenticate

Severity: Varies **Component:** sec

Text: Cant establish authentication to security server

Explanation: Can't establish authentication to security server.

Action: Ensure that caller has valid DCE credentials.

0x17122eaf sec_rgy_checkpoint

Severity: Notice **Component:** sec/sec_s_rs_rsdB

Text: Attempting to checkpoint registry database

Explanation: ?

Action: None required.

0x17122eb0 sec_rgy_checkpoint_succ

Severity: Notice **Component:** sec/sec_s_rs_rsdB

Text: Successfully checkpointed registry database

Explanation: ?

Action: None required.

0x17122eeb sec_rgy_checkpt_bad_at_time_str

Severity: Varies **Component:** sec

Text: The time string syntax for -at is incorrect.

Explanation: ?

Action: ?

0x17122eac sec_rgy_checkpt_log_file

Severity: Fatal **Component:** sec/sec_s_rs_rsdB

Text: Cannot checkpoint on log file\n%s

Explanation: ?

Action: ?

0x17122ead sec_rgy_checkpoint_rename_files

Severity: Fatal **Component:** sec/sec_s_rs_rsdh

Text: Cannot rename files during checkpoint\n%s

Explanation: ?

Action: ?

0x17122eae sec_rgy_checkpoint_save_rep_state

Severity: Fatal **Component:** sec/sec_s_rs_rsdh

Text: Cannot save replica state during checkpoint\n%s

Explanation: ?

Action: ?

0x17122d1c sec_rgy_checkpoint_start_task

Severity: Fatal **Component:** sec/sec_s_rs_main

Text: Cannot start checkpoint task\n%s

Explanation: Error when trying to start a thread to do checkpoint task

Action: ?

0x17122ee6 sec_rgy_chkpt_save_file

Severity: Notice **Component:** sec/sec_s_rs_rsdh

Text: Saving file %s

Explanation: ?

Action: None required.

0x17122ee7 sec_rgy_chkpt_save_relation

Severity: Notice **Component:** sec/sec_s_rs_rsdh

Text: Saving relation %s

Explanation: ?

Action: None required.

0x17122ee8 sec_rgy_compat_log_replay

Severity: Notice **Component:** sec/sec_s_rs_rsdh

Text: Compatibility log replay entered

Explanation: ?

Action: None required.

0x17122092 sec_rgy_crypt_bad_type

Severity: Varies **Component:** sec

Text: (de)encryption type not supported

Explanation: Specified encryption type is not supported.

Action: None required.

0x17122f66 sec_rgy_db_create

Severity: Fatal **Component:** sec/sec_s_rs_create_db

Text: Failed to create database\n%s

Explanation: ?

Action: ?

0x17122d01 sec_rgy_db_init

Severity: Notice **Component:** sec/sec_s_rs_main

Text: Attempting to initialize server database

Explanation: The security server is going to attempt to read the registry database into its virtual address space.

Action: None required.

0x17122d12 sec_rgy_db_init_err

Severity: Fatal **Component:** sec/sec_s_rs_main

Text: Cannot initialize server database\n%s

Explanation: Loading or initializing rgy database has error.

Action: ?

0x17122d1a sec_rgy_dce_rgy_identity

Severity: Fatal **Component:** sec/sec_s_general

Text: Cannot setup dce_rgy identity\n%s

Explanation: Cannot set process identity (dce-rgy) and context.

Action: ?

0x17122089 sec_rgy_dir_could_not_create

Severity: Varies **Component:** sec

Text: Unable to create directory

Explanation: Unable to create a directory necessary for the specified operation.

Action: Ensure you have privileges to invoke the specified operation.

0x1712208a sec_rgy_dir_move_illegal

Severity: Varies **Component:** sec

Text: Directory move not allowed

Explanation: Attempted to make a parent directory the child of one of its descendents

Action: Don't do that.

0x17122087 sec_rgy_dir_not_empty

Severity: Varies **Component:** sec

Text: Directory not empty

Explanation: Attempted to delete a nonempty directory. Not passed to clients.

Action: None required.

0x17122086 sec_rgy_dir_not_found

Severity: Varies **Component:** sec

Text: Directory not found

Explanation: Internal secd status code used to tell caller to build dirs

Action: None required.

0x171220a5 sec_rgy_era_pwd_mgmt_auth_type

Severity: Varies **Component:** sec

Text: pwd_mgmt_binding ERA binding auth type cannot be none

Explanation: Principal's pwd_mgmt_binding ERA authentication cannot be 'none'.

Action: Reattach the principal's pwd_mgmt_binding ERA with an authentication type of 'dce'.

0x1712208c sec_rgy_foreign_quota_exhausted

Severity: Varies **Component:** sec

Text: Foreign quota for realm exhausted

Explanation: Attempt by a foreign principal to add a registry object, but quota is exhausted.

Action: Notify system administrator.

0x17122f65 sec_rgy_get_cellname

Severity: Fatal **Component:** sec/sec_s_rs_create_db

Text: Cannot retrieve cell name\n%s

Explanation: ?

Action: ?

0x17122d26 sec_rgy_get_local_host_princ

Severity: Fatal **Component:** sec/sec_s_rs_login

Text: Cannot get local host principal name\n%s

Explanation: ?

Action: ?

0x1712217f sec_rgy_homedir_too_long

Severity: Varies **Component:** sec

Text: Home directory pathname is too long after canonicalization

Explanation: The supplied home directory pathname is longer than 256 characters after expanded from local name to global name.

Action: Shorten the local name of the home directory pathname.

0x1712209f sec_rgy_host_context_not_avail

Severity: Varies **Component:** sec

Text: Login context of local host principal not available

Explanation: Login context of local host principal not available.

Action: None required.

0x17122d17 sec_rgy_host_identity

Severity: Fatal **Component:** sec/sec_s_rs_main

Text: Cannot get host identity\n%s

Explanation: Cannot inherit host machine context and identity

Action: ?

0x1712207f sec_rgy_incomplete_login_name

Severity: Varies **Component:** sec

Text: Incomplete login name specification

Explanation: Specified login name structure was not completely specified.

Action: Ensure proper usage of the sec_rgy_login_name_t structure.

0x17122d10 sec_rgy_init_rpc_bind

Severity: Fatal **Component:** sec/sec_s_rs_main

Text: Cannot initialize RPC services\n%s

Explanation: Trying to initialize rpc binding failed.

Action: ?

0x17122078 sec_rgy_is_an_alias

Severity: Varies **Component:** sec

Text: Query returned an alias and allow_aliases was not set

Explanation: Query returned an alias and allow_aliases was not set

Action: None required.

0x17122099 sec_rgy_key_bad_size

Severity: Varies **Component:** sec

Text: Invalid size for key data

Explanation: Internal error, should not occur.

Action: Notify support personnel.

0x17122091 sec_rgy_key_bad_type

Severity: Varies **Component:** sec

Text: key type not supported

Explanation: The key type specified was not a valid for the specified operation.

Action: Ensure proper key type is being used. If this error is encountered within the DCE base components, notify support personnel.

0x1712208f sec_rgy_key_bad_version

Severity: Varies **Component:** sec

Text: key version number out of range

Explanation: Specified key version number is out of the valid range.

Action: None required.

0x17122090 sec_rgy_key_version_in_use

Severity: Varies **Component:** sec

Text: key version number currently in use

Explanation: Specified key version number is already in use.

Action: None required.

0x17122d15 sec_rgy_locksmith_init

Severity: Fatal **Component:** sec/sec_s_rs_main

Text: Cannot setup locksmith account\n%s

Explanation: ?

Action: ?

0x171220a4 sec_rgy_log_entry_out_of_range

Severity: Varies **Component:** sec

Text: Invalid log entry module or operation

Explanation: Internal error.

Action: Notify support personnel.

0x17122d11 sec_rgy_log_init_mgr

Severity: Fatal **Component:** sec/sec_s_rs_main

Text: Cannot initialize server log managers\n%s

Explanation: ?

Action: ?

0x1712209c sec_rgy_mkey_bad

Severity: Varies **Component:** sec

Text: Supplied master key is bad

Explanation: Registry master key retrieved from .mkey file doesn't match master key stored in the database.

Action: Restore registry database and .mkey file from backup.

0x1712209b sec_rgy_mkey_bad_stored

Severity: Varies **Component:** sec

Text: Stored master key is bad

Explanation: Registry master key stored in .mkey file has been corrupted.

Action: Restore registry database and .mkey file from backup.

0x1712209a sec_rgy_mkey_cant_read_stored

Severity: Varies **Component:** sec

Text: Can't read stored master key

Explanation: Unable to retrieve stored master key from .mkey file.

Action: Restore registry database and .mkey file from backup.

0x171220a0 sec_rgy_mkey_file_io_failed

Severity: Varies **Component:** sec

Text: Master_key file I/O operation failed

Explanation: Master key file operation (create/read/write) failed.

Action: Security server must be started by root. Check permissions on registry database directory and .mkey file.

0x17122e20 sec_rgy_mky_bad_cellname

Severity: Fatal **Component:** sec/sec_s_rs_mkey

Text: Illegal cell name : %s

Explanation: The cell name must begin with /.../ but it does not.

Action: ?

0x17122e29 sec_rgy_mky_gen_random

Severity: Fatal **Component:** sec/sec_s_rs_mkey

Text: Cannot create master_key: Error generating random master_key\n%s

Explanation: ?

Action: ?

0x17122e24 sec_rgy_mky_get_realm_name

Severity: Fatal **Component:** sec/sec_s_rs_mkey

Text: Cannot create master_key: Error converting cell name to realm name\n%s

Explanation: The cell name to be converted is not a legal cell name.

Action: ?

0x17122e26 sec_rgy_mky_init_keyseed

Severity: Fatal **Component:** sec/sec_s_rs_mkey

Text: Cannot create master_key. Error generating initial keyseed\n%s

Explanation: Problem generating a DES key from user-entered keyseed and timeofday.

Action: ?

0x17122e28 sec_rgy_mky_init_random

Severity: Fatal **Component:** sec/sec_s_rs_mkey

Text: Cannot create master_key: Error initializing random key generator\n%s

Explanation: ?

Action: ?

0x17122e2d sec_rgy_mky_not_match

Severity: Fatal **Component:** sec/sec_s_rs_mkey

Text: Master_key in memory doesn't match master_key stored in database\n%s

Explanation: ?

Action: ?

0x17122e27 sec_rgy_mky_process_keyseed

Severity: Fatal **Component:** sec/sec_s_rs_mkey

Text: Cannot create master_key. Error processing keyseed\n%s

Explanation: ?

Action: ?

0x17122e2a sec_rgy_mky_process_master_key

Severity: Fatal **Component:** sec/sec_s_rs_mkey

Text: Cannot create master_key: Error processing master_key\n%s

Explanation: ?

Action: ?

0x17122e25 sec_rgy_mky_setup_mkey_name

Severity: Fatal **Component:** sec/sec_s_rs_mkey

Text: Cannot create master_key Error setting up master_key

Explanation: Possibly caused by not enough memory to be allocated.

Action: ?

0x17122e2c sec_rgy_mky_store_db

Severity: Fatal **Component:** sec/sec_s_rs_mkey

Text: Error storing master_key in database\n%s

Explanation: ?

Action: ?

0x17122e2b sec_rgy_mky_store_disk

Severity: Fatal **Component:** sec/sec_s_rs_mkey

Text: Cannot create master_key: Error storing master_key on disk\n%s

Explanation: ?

Action: ?

0x17122076 sec_rgy_name_exists

Severity: Varies **Component:** sec

Text: Name already exists

Explanation: Attempted to add a registry object that already exists.

Action: None required.

0x17122079 sec_rgy_no_more_entries

Severity: Varies **Component:** sec

Text: No more matching entries

Explanation: End of list encountered while performing registry lookup.

Action: Stop performing lookup operation when this code is returned.

0x1712208d sec_rgy_no_more_unix_ids

Severity: Varies **Component:** sec

Text: Unix id space for domain has been exhausted

Explanation: No more available Unix IDs within allowable range.

Action: Increase maximum Unix ID limit, or clean up registry.

0x17122081 sec_rgy_not_authorized

Severity: Varies **Component:** sec

Text: User is not authorized to update record

Explanation: The object's ACL denied the attempted operation.

Action: An identity that is granted the right to perform the requested operation must be used.

0x17122073 sec_rgy_not_implemented

Severity: Varies **Component:** sec

Text: Operation not yet implemented

Explanation: Operation is not implemented in this version of DCE.

Action: Do not specify the operation in question with this version of DCE.

0x1712207c sec_rgy_not_member_group

Severity: Varies **Component:** sec

Text: User is not member of specified group

Explanation: The principal specified in the account operation is not a member of the specified primary group.

Action: The principal should be added to the group before this account operation is attempted.

0x1712207e sec_rgy_not_member_group_org

Severity: Varies **Component:** sec

Text: User is not member of specified group and org

Explanation: The principal specified in the account operation is not a member of the specified group or organization.

Action: The principal should be added to the specified group and organization before this operation is attempted.

0x1712207d sec_rgy_not_member_org

Severity: Varies **Component:** sec

Text: User is not member of specified org

Explanation: The principal specified in the account operation is not a member of the specified organization.

Action: The principal should be added to the organization before this account operation is attempted.

0x17122d00 sec_rgy_not_root

Severity: Varies **Component:** sec

Text: Not a privileged user

Explanation: The attempted operation requires root privileges.

Action: Retry the operation after logging in as a privileged user.

0x17122d1b sec_rgy_ns_register

Severity: Fatal **Component:** sec/sec_s_rs_main

Text: Cannot start nameservice registration task\n%s

Explanation: ?

Action: ?

0x17122d53 sec_rgy_ns_svr_get_binding

Severity: Fatal **Component:** sec/sec_s_rs_ns

Text: Cannot get server's bindings\n%s

Explanation: Cannot get server's rpc binding from its repository.

Action: ?

0x17122075 sec_rgy_object_exists

Severity: Varies **Component:** sec

Text: Object already exists

Explanation: Attempted to add a registry object that already exists.

Action: None required.

0x1712207a sec_rgy_object_not_found

Severity: Varies **Component:** sec

Text: Registry object not found

Explanation: Specified registry object was not found.

Action: Ensure that object is specified correctly and that caller is granted read access to the object.

0x17122094 sec_rgy_object_not_in_scope

Severity: Varies **Component:** sec

Text: object found was not in scope

Explanation: Attempted to lookup object that doesn't exist within the current scope.

Action: Ensure object is specified correctly and that scope is set to desired value.

0x17122080 sec_rgy_passwd_invalid

Severity: Varies **Component:** sec

Text: Invalid password

Explanation: Specified password is invalid.

Action: Ensure that the correct password is specified.

0x171220a7 sec_rgy_passwd_non_alpha

Severity: Varies **Component:** sec

Text: Passwords must contain at least one non-alphanumeric character

Explanation: Specified password contains all alphanumeric characters, which is not allowed by current policy.

Action: Specify a password that contains at least one non-alphanumeric character.

0x171220a8 sec_rgy_passwd_spaces

Severity: Varies **Component:** sec

Text: Passwords must contain at least one non-blank character

Explanation: Specified password contains no non-blank character, which is not allowed by current policy.

Action: Specify a password that contains at least one non-blank character.

0x171220a6 sec_rgy_passwd_too_short

Severity: Varies **Component:** sec

Text: Password is too short

Explanation: Specified password is shorter than the current minimum limit.

Action: Specify a longer password.

0x1712208b sec_rgy_quota_exhausted

Severity: Varies **Component:** sec

Text: Principal quota exhausted

Explanation: Principal's registry quota is exhausted and an update operation was attempted.

Action: Ensure that correct identity is used to perform operation. Increase quota if necessary.

0x17122082 sec_rgy_read_only

Severity: Varies **Component:** sec

Text: Registry is read only - updates are not allowed

Explanation: Registry is in a read only state and an update was attempted.

Action: Wait until registry is no longer in a read only state, then retry.

0x17122e80 sec_rgy_rep_add_master_replica

Severity: Fatal **Component:** sec/sec_s_rs_rep

Text: Error adding master replica to an uninitialized database\n%s

Explanation: When a slave database is re-initializing, in-memory data is cleared and re-created. Problem occurred when trying to add master replica to its database.

Action: ?

0x17122e7f sec_rgy_rep_add_my_replica

Severity: Fatal **Component:** sec/sec_s_rs_rep

Text: Error adding my replica to an uninitialized database\n%s

Explanation: When a slave database is re-initializing, in-memory data is cleared and re-created. Problem occurred when trying to add this slave replica to its database.

Action: ?

0x171220c9 sec_rgy_rep_already_initd

Severity: Varies **Component:** sec

Text: slave already initialized

Explanation: Attempt to initialize a replica that has already been initialized.

Action: None required.

0x171220bd sec_rgy_rep_babel

Severity: Varies **Component:** sec

Text: Cannot communicate with all slaves

Explanation: Obsolete?

Action: None required.

0x171220c2 sec_rgy_rep_bad_arg

Severity: Varies **Component:** sec

Text: bad argument

Explanation: Invalid operation.

Action: None required.

0x171220b6 sec_rgy_rep_bad_binding

Severity: Varies **Component:** sec

Text: bad binding

Explanation: Bad binding encountered by the registry server.

Action: Notify support personnel.

0x171220aa sec_rgy_rep_bad_db_version

Severity: Varies **Component:** sec

Text: bad database version

Explanation: Version stored with registry database is not that expected by the registry software executed.

Action: Ensure correct version of the DCE registry software is being used.

0x171220c8 sec_rgy_rep_bad_init_id

Severity: Varies **Component:** sec

Text: init_id from slave doesn't match master's init_id for the replica

Explanation: Internal error, should not occur

Action: Notify support personnel.

0x171220cf sec_rgy_rep_bad_master_seqno

Severity: Varies **Component:** sec

Text: Master sequence number is invalid

Explanation: Internal error, should not occur.

Action: Notify support personnel.

0x171220ca sec_rgy_rep_bad_prop_type

Severity: Varies **Component:** sec

Text: bad propagation type after prop operation

Explanation: Internal error, should not occur

Action: Notify support personnel.

0x171220b4 sec_rgy_rep_bad_state

Severity: Varies **Component:** sec

Text: bad state

Explanation: Operation attempted while registry was in a state unable to perform that type of operation.

Action: None required.

0x171220c6 sec_rgy_rep_bad_sw_vers

Severity: Varies **Component:** sec

Text: bad software version

Explanation: Attempted to start registry server with software that is at a version incompatible with that which is stored in the registry database.

Action: Ensure that you are using a version of DCE that is compatible with the existing configuration.

0x171220ab sec_rgy_rep_cannot_create_db

Severity: Varies **Component:** sec

Text: cannot create database

Explanation: Unable to create database.

Action: Ensure that replica is being configured correctly and that caller has rights to create the database files.

0x171220ac sec_rgy_rep_cannot_open_db

Severity: Varies **Component:** sec

Text: cannot open database

Explanation: Unable to open registry database file that should already exist.

Action: Ensure that replica has been configured correctly.

0x171220ad sec_rgy_rep_cannot_read_db

Severity: Varies **Component:** sec

Text: cannot read database

Explanation: Registry server is unable to read the registry database.

Action: The registry server must be run as root. If the registry database has been inadvertently deleted, restore it from backup.

0x171220af sec_rgy_rep_cannot_rename_db

Severity: Varies **Component:** sec

Text: cannot rename database

Explanation: The registry server was unable to rename the database files during conversion to the current database format.

Action: The registry server must be run as root. Ensure adequate disk space exists and that the registry database directory is accessible.

0x171220ae sec_rgy_rep_cannot_save_db

Severity: Varies **Component:** sec

Text: cannot save database

Explanation: Unable to save registry database to disk.

Action: Verify that registry database is still on disk and that sufficient disk space is available.

0x171220b9 sec_rgy_rep_clock_skew

Severity: Varies **Component:** sec

Text: clock skewed

Explanation: Clock value between registry server machines is out of tolerance.

Action: Synchronize the clocks on all registry server machines.

0x171220b8 sec_rgy_rep_db_locked

Severity: Varies **Component:** sec

Text: database locked

Explanation: Database is already locked by another process.

Action: Ensure that no other registry server is already running on this system.

0x171220b7 sec_rgy_rep_deleted

Severity: Varies **Component:** sec

Text: replica deleted

Explanation: Obsolete?

Action: None required.

0x171220bc sec_rgy_rep_doppelganger

Severity: Varies **Component:** sec

Text: Another replica with the same name or id exists

Explanation: Another replica with the same name or id exists.

Action: Determine why an identical replica already exists.

0x17122e71 sec_rgy_rep_entry_not_found

Severity: Fatal **Component:** sec/sec_s_rs_rep

Text: Cannot find in-memory replist entry in stable replist\n%s

Explanation: ?

Action: ?

0x17122d19 sec_rgy_rep_host_identity

Severity: Fatal **Component:** sec/sec_s_rs_main

Text: Replica cannot get local host identity\n%s

Explanation: Cannot get local host principal's context and identity

Action: ?

0x171220c5 sec_rgy_rep_init_ekey_invalid

Severity: Varies **Component:** sec
Text: initialization encryption key not valid
Explanation: Initialization encryption key is not valid.
Action: Notify support personnel.

0x17122d13 sec_rgy_rep_init_replica

Severity: Fatal **Component:** sec/sec_s_rs_main
Text: Cannot initialize server replica\n%s
Explanation: ?
Action: ?

0x171220c4 sec_rgy_rep_invalid_entry

Severity: Varies **Component:** sec
Text: invalid replica entry
Explanation: Invalid replica entry encountered.
Action: Notify support personnel.

0x171220c7 sec_rgy_rep_marked_for_init

Severity: Varies **Component:** sec
Text: replica already marked for initialization
Explanation: Attempted to mark a replica for initialization, that has already been marked for initialization.
Action: None required.

0x171220b1 sec_rgy_rep_master

Severity: Varies **Component:** sec
Text: Replica is the master
Explanation: Specified operation may only be performed at a non-master registry replica site.

Action: None required.

0x171220cb sec_rgy_rep_master_bad_sw_vers

Severity: Varies **Component:** sec

Text: master is running a bad software version

Explanation: Master registry is running a version of software that is not compatible with the replica registry servers.

Action: Ensure that the correct version of sw is being used.

0x171220cd sec_rgy_rep_master_dup

Severity: Varies **Component:** sec

Text: duplicate masters

Explanation: Duplicate master registry servers found.

Action: Ensure that only one master registry server exists for this cell.

0x171220b0 sec_rgy_rep_master_not_found

Severity: Varies **Component:** sec

Text: cannot find master

Explanation: A registry replica was unable to locate the master registry.

Action: Ensure the master registry is up and accessible.

0x17122e4b sec_rgy_rep_master_obsolete

Severity: Fatal **Component:** sec/sec_s_rs_rep

Text: Master's database is probably obsolete\n%s

Explanation: A slave has a higher update sequence number than this master, which implies this master has an obsolete database; so exit itself.

Action: ?

0x17122e79 sec_rgy_rep_mst_restart_prop

Severity: Fatal **Component:** sec/sec_s_rs_rep

Text: Master cannot restart prop tasks when change_master failed\n%s

Explanation: After change_master operation failed, the old master try to resume its master role but fail to restart its propagation task threads.

Action: ?

0x171220ce sec_rgy_rep_must_init_slave

Severity: Varies **Component:** sec

Text: Slave wants init to re-sync with master

Explanation: Internal usage only?

Action: None required.

0x171220b5 sec_rgy_rep_name_unavailable

Severity: Varies **Component:** sec

Text: name unavailable

Explanation: Obsolete?

Action: None required.

0x171220c3 sec_rgy_rep_no_default_replica

Severity: Varies **Component:** sec

Text: no default replica

Explanation: Obsolete?

Action: None required.

0x171220b3 sec_rgy_rep_not_from_master

Severity: Varies **Component:** sec

Text: not from master

Explanation: Internal error, should not happen.

Action: Notify support personnel.

0x171220b2 sec_rgy_rep_not_master

Severity: Varies **Component:** sec

Text: Replica is not the master

Explanation: Specified operation may only be performed by the master registry server.

Action: None required.

0x171220be sec_rgy_rep_not_on_replist

Severity: Varies **Component:** sec

Text: The server that greeted the master is not on the replica list

Explanation: Obsolete?

Action: None required.

0x17122e09 sec_rgy_rep_pack_entry

Severity: Fatal **Component:** sec/sec_s_rs_log

Text: Cannot pack replica entry\n%s

Explanation: When trying to log replication for add or replace, error occurs.

Action: ?

0x171220a9 sec_rgy_rep_pgmerr

Severity: Varies **Component:** sec

Text: replication program error

Explanation: Internal error, should not occur.

Action: Notify support personnel.

0x171220c0 sec_rgy_rep_prop_busy

Severity: Varies **Component:** sec

Text: All non-zombie replicas are either busy or have received the specified update

Explanation: Obsolete?

Action: None required.

0x171220bf sec_rgy_rep_prop_complete

Severity: Varies **Component:** sec

Text: All non-zombie replicas have received the specified update

Explanation: Obsolete?

Action: None required.

0x171220c1 sec_rgy_rep_prop_from_rep

Severity: Varies **Component:** sec

Text: Server will not accept propagations now because it is serving as initializer ('from_rep') to a new slave

Explanation: Obsolete?

Action: None required.

0x17122e7e sec_rgy_rep_recover_db

Severity: Fatal **Component:** sec/sec_s_rs_rep

Text: Cannot recover database\n%s

Explanation: After an attempt to initialize a replica failed, this operation tried to clear data in memory and reload pre-initialization database from disk, also failed.

Action: ?

0x17122e7c sec_rgy_rep_set_init_id

Severity: Fatal **Component:** sec/sec_s_rs_rep

Text: Cannot save state init_id\n%s

Explanation: This code won't be executed; we may as well take it out :-)) or replaced with same fatal message

Action: ?

0x17122e7b sec_rgy_rep_set_state

Severity: Fatal **Component:** sec/sec_s_rs_rep

Text: Cannot set replica state\n%s

Explanation: This code won't be executed; we may as well take it out :-) or replaced with same fatal message

Action: ?

0x17122e7d sec_rgy_rep_set_volatile_state

Severity: Fatal **Component:** sec/sec_s_rs_rep

Text: Cannot save volatile replica state\n%s

Explanation: This code won't be executed; we may as well take it out :-) or replaced with same fatal message

Action: ?

0x171220cc sec_rgy_rep_slave_bad_sw_vers

Severity: Varies **Component:** sec

Text: slave is running a bad software version

Explanation: Replica registry server is running a version of software that is not compatible with the master registry server.

Action: Ensure that the correct version of sw is being used.

0x17122e7a sec_rgy_rep_slv_restart_prop

Severity: Fatal **Component:** sec/sec_s_rs_rep

Text: Master cannot restart prop tasks when become_slave failed\n%s

Explanation: After become_slave operation failed, the old master try to resume its master role but fail to restart its propagation task threads.

Action: ?

0x17122181 sec_rgy_rep_sw_rev_multi

Severity: Varies **Component:** sec

Text: Security server software version must be set forward one version at a time

Explanation: Admin user attempted to set the security service software version forward multiple versions beyond the current software version

Action: Determine the current security software version and migrate forward one version at a time by issuing successive set version commands

0x171220d1 sec_rgy_rep_sw_rev_no_setback

Severity: Varies **Component:** sec

Text: Security server software version cannot be rolled back dynamically

Explanation: Admin user attempted to set the security service software version back to an earlier version than is currently running

Action: If an earlier version of the software is wanted, restore an earlier version from backup, make sure the security server binary can support the version that was in effect when the backup was performed, and restart the server.

0x171220d0 sec_rgy_rep_sw_rev_nosup

Severity: Varies **Component:** sec

Text: replica cannot support the specified software version

Explanation: An attempt was made to create a replica that cannot support the software version currently in effect at the master, or an admin operation to set the software version failed at the master because the master does not support the specified version.

Action: Find out what versions the security master can support and specify a correct version, or install a new binaries that can support the desired software version.

0x17122182 sec_rgy_rep_sw_rev_outstanding

Severity: Varies **Component:** sec

Text: A previous security server software version change is still underway

Explanation: Admin user attempted to set the security service software version before a previous version change had completed.

Action: Wait for the outstanding version change to complete before issuing another

0x171220ba sec_rgy_rep_update_seqno_high

Severity: Varies **Component:** sec

Text: slave must have missed/lost some update from master

Explanation: Slave must have missed/lost some update from the master.

Action: If problem does not correct itself with propagations from the master, then the replica may need to be initialized with a security administration tool.

0x171220bb sec_rgy_rep_update_seqno_low

Severity: Varies **Component:** sec

Text: slave received an old update from master

Explanation: Registry replica received an update from a master registry that is older than updates already received by the replica. Either the replica is accepting the new master and should automatically reinitialize itself from this master, or it believes that the master has an obsolete database and it will shut down.

Action: Ensure that an obsolete master registry server has not been started on the network.

0x17122ebf sec_rgy_rsd_b_attr_delete

Severity: Fatal **Component:** sec/sec_s_rs_rsd_b

Text: Can't delete attribute instance\n%s

Explanation: ?

Action: ?

0x17122ec0 sec_rgy_rsd_b_attr_export

Severity: Fatal **Component:** sec/sec_s_rs_rsd_b

Text: Cannot export attribute instance\n%s

Explanation: When exporting attribute values from database to sec_attr, error occurs.

Action: ?

0x17122ebe sec_rgy_rsd_b_attr_import

Severity: Fatal **Component:** sec/sec_s_rs_rsd_b

Text: Can't import attribute\n%s

Explanation: When importing attribute values in sec_attr to internal buffer area, error occurs.

Action: ?

0x17122ebd sec_rgy_rsd_b_attr_set_id

Severity: Fatal **Component:** sec/sec_s_rs_rsd_b

Text: Cannot set object's attr_list_id\n%s

Explanation: ?

Action: ?

0x17122e78 sec_rgy_rsd_b_checkpoint

Severity: Fatal **Component:** sec/sec_s_rs_rep

Text: Cannot do database checkpoint\n%s

Explanation: ?

Action: ?

0x17122e81 sec_rgy_rsd_b_checkpoint_uninit

Severity: Fatal **Component:** sec/sec_s_rs_rep

Text: Error checkpointing an uninitialized database\n%s

Explanation: When a slave database is re-initializing, in-memory data is cleared and re-created. Problem occurred when trying to do checkpoint on this database.

Action: ?

0x1712207b sec_rgy_server_unavailable

Severity: Varies **Component:** sec

Text: Registry server unavailable

Explanation: Unable to contact a registry server.

Action: Verify that at least one registry server exists and retry the operation.

0x17122d0f sec_rgy_set_stack_size

Severity: Fatal **Component:** sec/sec_s_general

Text: Cannot set stack size for listener threads

Explanation: Cannot set rpc listener thread stack size to be 64*1024.

Action: possible out of memory/swap space?

0x17122d06 sec_rgy_shutdown_done

Severity: Notice **Component:** sec/sec_s_rs_main

Text: Shutdown completed

Explanation: Security server shutdown has been completed.

Action: None required.

0x17122d1d sec_rgy_sigcatch_start_task

Severity: Fatal **Component:** sec/sec_s_rs_main

Text: Cannot start signal catch task\n%s

Explanation: Error when trying to start a thread to do signal catch task

Action: ?

0x171220a2 sec_rgy_site_not_absolute

Severity: Varies **Component:** sec

Text: Registry site name must be absolute

Explanation: A non-absolute name specified as the registry site.

Action: Specify an absolute pathname for the registry site.

0x1712209e sec_rgy_s_pgo_is_required

Severity: Varies **Component:** sec

Text: PGO/account is required and can't be deleted

Explanation: Attempted to delete a required PGO or account.

Action: Do not attempt to delete this object.

0x17122d05 sec_rgy_startup_done

Severity: Notice **Component:** sec/sec_s_rs_main

Text: Startup completed

Explanation: Security server initialization has been completed.

Action: None required.

0x17122d16 sec_rgy_svr_register

Severity: Fatal **Component:** sec/sec_s_rs_main

Text: Cannot register server\n%s

Explanation: Failed when registering with the rpc runtime and with the endpoint mapper.

Action: ?

0x17122d54 sec_rgy_svr_register_ns

Severity: Fatal **Component:** sec/sec_s_rs_ns

Text: Can't register with name service\n%s

Explanation: ?

Action: ?

0x17122d03 sec_rgy_thr_exit_alert

Severity: Fatal **Component:** sec/sec_s_rs_main

Text: Thread is exiting with alert exception

Explanation: ?

Action: ?

0x17122d04 sec_rgy_thr_exit_exc

Severity: Fatal **Component:** sec/sec_s_rs_main

Text: Thread is exiting with an exception

Explanation: ?

Action: ?

0x17122d02 sec_rgy_thr_join

Severity: Fatal **Component:** sec/sec_s_rs_main

Text: Cannot join with listener task

Explanation: Cannot join pthread tasks

Action: ?

0x17122d1e sec_rgy_thr_set_pool

Severity: Fatal **Component:** sec/sec_s_rs_main

Text: Cannot set default thread pool queue length\n%s

Explanation: Prior to setting maximum number of rpc listener threads, a call to set rpc listener threads pool queue length failed,

Action: ?

0x171220a1 sec_rgy_tower_rebind_failed

Severity: Varies **Component:** sec

Text: No usable tower entries

Explanation: ?

Action: None required.

0x17122d0e sec_rgy_unauth_cred_handle_init

Severity: Fatal **Component:** sec/sec_s_rs_main

Text: Cannot create global unauth cred handle

Explanation: Fail to create the global unauth cred handle

Action: possible out of memory/swap space?

0x17122077 sec_rgy_unix_id_changed

Severity: Varies **Component:** sec

Text: Unix id changed on an alias add

Explanation: The specified unix id doesn't match unix id extracted from the specified UUID.

Action: Pass a nil uuid (see uuid_create_nil()) and let the security service create a uuid from the specified unix id.

0x1712208e sec_rgy_uuid_bad_version

Severity: Varies **Component:** sec

Text: Uuid version invalid

Explanation: Version of UUID does not match that expected for this operation. Could occur if the registry server expected a UUID containing an embedded Unix ID, but was passed a generic UUID.

Action: Pass the proper UUID type specified by the particular API in use.

0x17122cc0 sec_rrs_cant_get_next_key

Severity: Fatal **Component:** sec/sec_s_rs_rrs

Text: Could not get current key version

Explanation: ?

Action: ?

0x17122eb7 sec_rsdb_acct_add_curkey

Severity: Fatal **Component:** sec/sec_s_rs_rsdb

Text: Attempt to add current key version detected

Explanation: ?

Action: Log a defect.

0x17122192 sec_rsdb_acct_bad_keytype

Severity: Error **Component:** sec/sec_s_rs_rsdb

Text: Only DES keys allowed for this account

Explanation: An attempt was made to set a non-default keytype for a principal where only DES keys are allowed. Only the krbtgt principal is allowed to have non-default keytypes.

Action: Use a DES keytype.

0x17122eb5 sec_rsdb_acct_cant_getid

Severity: Fatal **Component:** sec/sec_s_rs_rsdb

Text: Unable to get account by id

Explanation: ?

Action: Log a defect.

0x17122eb8 sec_rsdb_acct_end_list

Severity: Fatal **Component:** sec/sec_s_rs_rsdb

Text: unexpected end of member list

Explanation: ?

Action: Log a defect.

0x17122eb6 sec_rsdb_acct_noaliases

Severity: Fatal **Component:** sec/sec_s_rs_rsdb

Text: Ran out of aliases

Explanation: ?

Action: Log a defect.

0x17122eb4 sec_rsdb_acct_reset

Severity: Fatal **Component:** sec/sec_s_rs_rsdb

Text: Unable to reset previous acct info

Explanation: ?

Action: ?

Explanation: Internal error.

Action: Log a defect.

0x17122e01 sec_rs_log_open_fail

Severity: Fatal **Component:** sec/sec_s_rs_log

Text: Failed to open log file

Explanation: ?

Action: ?

0x17122e03 sec_rs_log_propq_add_fail

Severity: Varies **Component:** sec

Text: Add to propagation queue failed.

Explanation: ?

Action: ?

0x17122e04 sec_rs_log_replay

Severity: Notice **Component:** sec/sec_s_rs_log

Text: Attempting to replay the log file

Explanation: Replay the log file.

Action: None required.

0x17122e07 sec_rs_log_replay_entry

Severity: Notice **Component:** sec/sec_s_rs_log

Text: \tReplay: Module=[%s] Op=[%s] Seqno=[%s]

Explanation: Logged during replay

Action: None required.

0x17122e08 sec_rs_log_replay_err

Severity: Error **Component:** sec/sec_s_rs_log

Text: Error replaying log

Explanation: ?

Action: ?

0x17122e05 sec_rs_log_replay_succ

Severity: Notice **Component:** sec/sec_s_rs_log

Text: Successfully replayed the log file

Explanation: Replayed the log file

Action: None required.

0x17122e21 sec_rs_mkey_actver_mismatch

Severity: Fatal **Component:** sec/sec_s_rs_mkey

Text: Account's master_key version doesn't match old or new

Explanation: ?

Action: ?

0x17122e23 sec_rs_mkey_long_keyseed

Severity: Error **Component:** sec/sec_s_rs_mkey

Text: Keyseed too long

Explanation: ?

Action: ?

0x17122e22 sec_rs_mkey_unknown

Severity: Fatal **Component:** sec/sec_s_rs_mkey

Text: Unrecognized master key version decrypting account key

Explanation: ?

Action: ?

0x17122d4c sec_rs_ns_bind_export

Severity: Notice **Component:** sec/sec_s_rs_ns

Text: Attempting to export bindings to %s

Explanation: The security server is attempting to export the interfaces to the name space.

Action: None required.

0x17122d4d sec_rs_ns_bind_export_succ

Severity: Notice **Component:** sec/sec_s_rs_ns

Text: Successfully exported bindings to %s

Explanation: The bindings have been exported to name space.

Action: None required.

0x17122d4e sec_rs_ns_bind_remove_succ

Severity: Notice **Component:** sec/sec_s_rs_ns

Text: Successfully removed bindings from %s

Explanation: The bindings have been exported to name space.

Action: None required.

0x17122d52 sec_rs_ns_cant_rm_member

Severity: Warning **Component:** sec/sec_s_rs_ns

Text: Unable to remove old name (%s)from group (%s)

Explanation: ?

Action: None required.

0x17122d51 sec_rs_ns_cant_rm_name

Severity: Warning **Component:** sec/sec_s_rs_ns

Text: Old name (%s)not removed from nameservice

Explanation: ?

Action: None required.

0x17122d42 sec_rs_ns_grp_ent_create_fail

Severity: Notice **Component:** sec/sec_s_rs_ns

Text: Group (%s) entry not created

Explanation: Informational event.

Action: None required.

0x17122d43 sec_rs_ns_grp_ent_create_succ

Severity: Notice **Component:** sec/sec_s_rs_ns

Text: Group (%s) entry created

Explanation: Informational event

Action: None required.

0x17122d44 sec_rs_ns_grp_mbr_add_fail

Severity: Notice **Component:** sec/sec_s_rs_ns

Text: Member (%s) not added to group (%s)

Explanation: Informational event.

Action: None required.

0x17122d45 sec_rs_ns_grp_mbr_add_succ

Severity: Notice **Component:** sec/sec_s_rs_ns

Text: Member (%s) added to group (%s)

Explanation: The member was added to the group.

Action: None required.

0x17122d4f sec_rs_ns_name_del_succ

Severity: Notice **Component:** sec/sec_s_rs_ns

Text: %s removed NSI and from group entry %s

Explanation: The name entry has been deleted successfully from the name space. The name entry is also no longer a member of the group entry.

Action: None required.

0x17122d50 sec_rs_ns_name_not_removed

Severity: Warning **Component:** sec/sec_s_rs_ns

Text: Old name not removed from nameservice, it may not belong to this server

Explanation: ?

Action: None required.

0x17122d40 sec_rs_ns_null_profile

Severity: Error **Component:** sec/sec_s_rs_ns

Text: Profile name is NULL

Explanation: This is an internal error.

Action: Log a defect

0x17122d41 sec_rs_ns_null_v1_group

Severity: Error **Component:** sec/sec_s_rs_ns

Text: rs_ns_sec_group_name_v1 is NULL.

Explanation: This is an internal error.

Action: Log a defect.

0x17122d46 sec_rs_ns_prof_elt_add_fail

Severity: Notice **Component:** sec/sec_s_rs_ns

Text: Profile element (%s) not added

Explanation: The profile element was not added to cell-profile.

Action: None required.

0x17122d47 sec_rs_ns_prof_elt_add_succ

Severity: Notice **Component:** sec/sec_s_rs_ns

Text: Profile element (%s) added

Explanation: The profile element was added to cell-profile.

Action: None required.

0x17122d4a sec_rs_ns_prof_elt_inq_fail

Severity: Notice **Component:** sec/sec_s_rs_ns

Text: Profile element inquire failed

Explanation: ?

Action: None required.

0x17122d4b sec_rs_ns_prof_elt_inq_succ

Severity: Notice **Component:** sec/sec_s_rs_ns

Text: Read catalog point: %s from profile: %s

Explanation: ?

Action: None required.

0x17122d48 sec_rs_ns_prof_elt_rm_fail

Severity: Notice **Component:** sec/sec_s_rs_ns

Text: %s Profile element not removed

Explanation: The secidmap to sec mapping could not be removed from cell-profile

Action: None required.

0x17122d49 sec_rs_ns_prof_elt_rm_succ

Severity: Notice **Component:** sec/sec_s_rs_ns

Text: %s Profile element removed

Explanation: The secidmap to sec mapping was removed from cell-profile

Action: None required.

0x17122cd2 sec_rs_pipe_not_created

Severity: Error **Component:** sec/sec_s_rs

Text: Unable to establish parent child pipe

Explanation: ?

Action: ?

0x17122cc1 sec_rs_pwd_bogus_pickle

Severity: Fatal **Component:** sec/sec_s_rs

Text: Bogus password pickle

Explanation: Internal password representation incorrect.

Action: Log a defect.

0x17122e65 sec_rs_rep_incompat_version

Severity: Error **Component:** sec/sec_s_rs_rep

Text: Software version incompatible with master's version. Server is going to exit

Explanation: ?

Action: ?

0x17122e64 sec_rs_rep_not_master

Severity: Fatal **Component:** sec/sec_s_rs_rep

Text: Replica is no longer the master.

Explanation: ?

Action: ?

0x17122d80 sec_rs_rpc_if_reg_succ

Severity: Notice **Component:** sec/sec_s_rs_rpc

Text: RPC interfaces registered.

Explanation: Security server has successfully registered the server interfaces with the RPC runtime and the end point mapper

Action: None required.

0x17122d83 sec_rs_rpc_if_unreg_succ

Severity: Notice **Component:** sec/sec_s_rs_rpc

Text: RPC interfaces unregistered.

Explanation: Security server has unregistered the server interfaces from the RPC runtime and the end point mapper

Action: None required.

0x17122d85 sec_rs_rpc_inq_bind_err

Severity: Error **Component:** sec/sec_s_rs_rpc

Text: Unable to establish server bindings

Explanation: ?

Action: ?

0x17122d81 sec_rs_rpc_propif_reg_succ

Severity: Notice **Component:** sec/sec_s_rs_rpc

Text: RPC propagation interfaces registered.

Explanation: Security server has successfully registered the interfaces required for security replication with the RPC runtime and the end point mapper.

Action: None required.

0x17122d82 sec_rs_rpc_propif_unreg_succ

Severity: Notice **Component:** sec/sec_s_rs_rpc

Text: RPC propagation interfaces unregistered.

Explanation: Security server has unregistered the interfaces required for security replication from the RPC runtime and the end point mapper.

Action: None required.

0x17122d87 sec_rs_rpc_prot_twr_err

Severity: Error **Component:** sec/sec_s_rs_rpc

Text: Unable to get server's protocol towers

Explanation: ?

Action: ?

0x17122d86 sec_rs_rpc_save_bind_err

Severity: Error **Component:** sec/sec_s_rs_rpc

Text: Unable to save server's bindings

Explanation: ?

Action: ?

0x17122d84 sec_rs_rpc_use_protseq_err

Severity: Error **Component:** sec/sec_s_rs_rpc

Text: Unable to listen on any protocol sequence

Explanation: ?

Action: ?

0x17122da1 sec_rs_thr_create_fail

Severity: Error **Component:** sec/sec_s_rs_thr

Text: Failed to created thread %s

Explanation: The specified thread could not be created . The actual cause of failure is logged prior to this.

Action: Depends on the error logged prior to this message.

0x17122da0 sec_rs_thr_exit_creat_fail

Severity: Varies **Component:** sec

Text: Exiting because thread creation failed.\n

Explanation: The security server exited because thread creation failed. To name of the thread which could not be created and the reason why it could not be created is logged by the status sec_rs_thr_create_fail.

Action: See the action recommended in the status sec_thr_create_fail.

0x17122da3 sec_rs_thr_exiting

Severity: Notice **Component:** sec/sec_s_rs_thr

Text: \"%s\" thread is going to exit

Explanation: The thread is about to exit.

Action: None required.

0x17122da2 sec_rs_thr_started

Severity: Notice **Component:** sec/sec_s_rs_thr

Text: \"%s\" thread started

Explanation: The specified thread has been started. This message is logged by a thread as soon as it is created and starts running.

Action: None required.

0x17122e60 sec_rs_vmcc_cant_register

Severity: Fatal **Component:** sec/sec_s_rs_rep

Text: Unable to register virtual memory kerberos credential cache type

Explanation: ?

Action: Log a defect

0x17122e61 sec_rs_vmcc_cant_remove

Severity: Fatal **Component:** sec/sec_s_rs_rep

Text: Cannot remove individual credentials from VM ccache

Explanation: ?

Action: Log a defect

0x17122001 sec_s_authz_unsupp

Severity: Varies **Component:** sec

Text: authorization protocol unsupported by authentication protocol.

Explanation: The requested authorization protocol is not supported by the authentication protocol requested.

Action: Application should use an authorization/authentication protocol pair which are supported.

0x1712200d sec_s_bad_key_parity

Severity: Varies **Component:** sec

Text: DES key has bad parity

Explanation: Specified DES key did not pass a parity check.

Action: If error was encountered from a client application, that application may need to be fixed. If error was encountered within the DCE core components, notify support personnel.

0x17122003 sec_s_bad_nonce

Severity: Varies **Component:** sec

Text: incorrect response to challenge

Explanation: Client failed challenge issued by server in RPC DG callback. Could be caused by a bug in DCE, trouble with the network, or possibly a failed security attack.

Action: Ensure network is functioning properly. Ensure no obvious network attacks are in progress. Notify support personnel.

0x1609c006 sec_s_bsafe_alg_operation_unknown

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Unknown operation for an algorithm or algorithm info type

Explanation: Unknown operation for an algorithm or algorithm info type

Action: ?

0x1609c001 sec_s_bsafe_algorithm_already_set

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Algorithm object has already been set with algorithm info

Explanation: Algorithm object has already been set with algorithm info

Action: ?

0x1609c002 sec_s_bsafe_algorithm_info

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Invalid algorithm info format

Explanation: Invalid algorithm info format

Action: ?

0x1609c003 sec_s_bsafe_algorithm_not_initialized

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Algorithm object has not been initialized

Explanation: Algorithm object has not been initialized

Action: ?

0x1609c004 sec_s_bsafe_algorithm_not_set

Severity: Error **Component:** psm/psm_s_bsafe

Text: Algorithm object has not been set with algorithm info

Explanation: Algorithm object has not been set with algorithm info

Action: ?

0x1609c005 sec_s_bsafe_algorithm_obj

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Invalid algorithm object

Explanation: Invalid algorithm object

Action: ?

0x1609c007 sec_s_bsafe_alloc

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Insufficient memory

Explanation: Insufficient memory

Action: ?

0x1609c008 sec_s_bsafe_cancel

Severity: Error **Component:** psm/psm_s_bsafe
Text: BSAFE2: Operation was canceled by the surrender function
Explanation: Operation was canceled by the surrender function
Action: ?

0x1609c009 sec_s_bsafe_data

Severity: Error **Component:** psm/psm_s_bsafe
Text: BSAFE2: Generic data error
Explanation: Generic data error
Action: ?

0x1609c024 sec_s_bsafe_decryption_failure

Severity: Error **Component:** psm/psm_s_psm
Text: BSAFE2: decryption failure
Explanation: Wrong password or key supplied in decryption or verification
Action: Get the right password or key

0x1609c00a sec_s_bsafe_exponent_even

Severity: Error **Component:** psm/psm_s_bsafe
Text: BSAFE2: Public exponent in key pair generation is not allowed to be even
Explanation: Invalid even value for public exponent in key pair generation
Action: ?

0x1609c00b sec_s_bsafe_exponent_len

Severity: Error **Component:** psm/psm_s_bsafe
Text: BSAFE2: Invalid exponent length for public exponent in key pair generation
Explanation: Invalid exponent length for public exponent in key pair generation
Action: ?

0x1609c00c sec_s_bsafe hardware

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Cryptographic hardware error

Explanation: Cryptographic hardware error

Action: ?

0x1609c020 sec_s_bsafe_input_count

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Update called an invalid number of times for inputting data

Explanation: Update called an invalid number of times for inputting data

Action: ?

0x1609c00d sec_s_bsafe_input_data

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Invalid format for input data

Explanation: Invalid format for input data

Action: ?

0x1609c00e sec_s_bsafe_input_len

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Invalid length for input data

Explanation: Invalid length for input data

Action: ?

0x1609c00f sec_s_bsafe_key_already_set

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Key object has already been set with key info

Explanation: Key object has already been set with key info

Action: ?

0x1609c010 sec_s_bsafe_key_info**Severity:** Error **Component:** psm/psm_s_bsafe**Text:** BSAFE2: Invalid key info format**Explanation:** Invalid key info format**Action:** ?**0x1609c011 sec_s_bsafe_key_len****Severity:** Error **Component:** psm/psm_s_bsafe**Text:** BSAFE2: Invalid key length**Explanation:** Invalid key length**Action:** ?**0x1609c012 sec_s_bsafe_key_not_set****Severity:** Error **Component:** psm/psm_s_bsafe**Text:** BSAFE2: Key object has not been set with key info**Explanation:** Key object has not been set with key info**Action:** ?**0x1609c013 sec_s_bsafe_key_obj****Severity:** Error **Component:** psm/psm_s_bsafe**Text:** BSAFE2: Invalid key object**Explanation:** Invalid key object**Action:** ?**0x1609c014 sec_s_bsafe_key_operation_unknown****Severity:** Error **Component:** psm/psm_s_bsafe**Text:** BSAFE2: Unknown operation for a key info type**Explanation:** Unknown operation for a key info type**Action:** ?

0x1609c015 sec_s_bsafe_memory_obj

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Invalid internal memory object

Explanation: Invalid internal memory object

Action: ?

0x1609c021 sec_s_bsafe_method_not_in_chooser

Severity: Error **Component:** psm/psm_s_bsafe

Text: Algorithm method required by the specified algorithm not in algorithm chooser

Explanation: Algorithm method required by the specified algorithm not in algorithm chooser

Action: ?

0x1609c025 sec_s_bsafe_mod_size_out_of_range

Severity: Error **Component:** psm/psm_s_psm

Text: BSAFE2: key modulus length should be between 256 - 1024

Explanation: key modulus length is too small or too big for public key generation

Action: Get the right modulus length

0x1609c016 sec_s_bsafe_modulus_len

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Invalid modulus length in public or private key

Explanation: Invalid modulus length in public or private key

Action: ?

0x1609c017 sec_s_bsafe_not_initialized

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Algorithm is not properly initialized

Explanation: Algorithm is not properly initialized

Action: ?

0x1609c018 sec_s_bsafe_not_supported

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Unsupported operation requested

Explanation: Unsupported operation requested

Action: ?

0x1609c022 sec_s_bsafe_output_count

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Update called an invalid number of times for outputting data

Explanation: Update called an invalid number of times for outputting data

Action: ?

0x1609c019 sec_s_bsafe_output_len

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Output data is larger than supplied buffer

Explanation: Output data is larger than supplied buffer

Action: ?

0x1609c01a sec_s_bsafe_over_32k

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Data block exceeds 32,767 bytes

Explanation: Data block exceeds 32,767 bytes

Action: ?

0x1609c01b sec_s_bsafe_random_not_initialized

Severity: Error **Component:** psm/psm_s_bsafe

Text: BSAFE2: Random algorithm has not been initialized

Explanation: Random algorithm has not been initialized

Action: ?

0x1609c01c sec_s_bsafe_random_obj

Severity: Error **Component:** psm/psm_s_bsafe
Text: BSAFE2: Invalid algorithm object for the random algorithm
Explanation: Invalid algorithm object for the random algorithm
Action: ?

0x1609c01d sec_s_bsafe_signature

Severity: Error **Component:** psm/psm_s_bsafe
Text: BSAFE2: Invalid signature
Explanation: Invalid signature
Action: ?

0x1609c023 sec_s_bsafe_unknown_error

Severity: Error **Component:** psm/psm_s_bsafe
Text: BSAFE2: Unknown bsafe error
Explanation: Unknown bsafe error
Action: ?

0x1609c01e sec_s_bsafe_wrong_algorithm_info

Severity: Error **Component:** psm/psm_s_bsafe
Text: BSAFE2: Wrong type of algorithm info
Explanation: Wrong type of algorithm info
Action: ?

0x1609c01f sec_s_bsafe_wrong_key_info

Severity: Error **Component:** psm/psm_s_bsafe
Text: BSAFE2: Wrong type of key info
Explanation: Wrong type of key info
Action: ?

0x17122d09 sec_secd_cl_bad_arg

Severity: Error **Component:** sec/sec_s_rs_main

Text: Bad argument for %s option

Explanation: The argument for the specified option is not correct.

Action: Specify the correct options.

0x17122d0c sec_secd_cl_bad_chkpt_interval

Severity: Error **Component:** sec/sec_s_rs_main

Text: Checkpoint interval not a positive number.

Explanation: Checkpoint interval specified on the command line is not a positive number.

Action: Run the command again with a positive value for the checkpoint interval

0x17122d0b sec_secd_cl_locksmith_opt

Severity: Error **Component:** sec/sec_s_rs_main

Text: Option %s can only be specified with -locksmith

Explanation: The specified option is valid and can be used only when -locksmith is also used.

Action: Specify -locksmith along with this option

0x17122d08 sec_secd_cl_missing_arg

Severity: Error **Component:** sec/sec_s_rs_main

Text: Missing argument for %s option

Explanation: The specified option requires an argument which was not specified.

Action: Specify the missing argument for the given option.

0x17122d0a sec_secd_cl_unknown_opt

Severity: Error **Component:** sec/sec_s_rs_main

Text: Unknown command line option : %s

Explanation: The specified option is either invalid or unknown.

Action: Run secd with correct option.

0x17122d07 sec_secd_cl_usage

Severity: Notice **Component:** sec/sec_s_rs_main

Text: Usage: secd [-bootstrap] [-restore_master] [-verbose] [-w serviceability]\n\t\t [-locksmith principal_name [-lockpw] [-remote]]

Explanation: secd started with incorrect arguments

Action: Run secd with correct options and arguments. Consult the secd nmanual page for details.

0x1712200e sec_s_invalid_auth_params

Severity: Varies **Component:** sec

Text: Invalid authentication params

Explanation: Invalid authentication parameter

Action: None required.

0x1712200b sec_s_invalid_nameservice_entry

Severity: Varies **Component:** sec

Text: invalid nameservice entry

Explanation: Registry server encountered an error while processing its nameservice entry. May be caused by an incomplete or incorrect configuration, or by duplicate secd replicas running simultaneously.

Action: Ensure configuration is complete. Ensure no duplicate secd replicas are running on the network.

0x17122f24 sec_site_bind_default

Severity: Notice **Component:** sec/sec_s_rgybind

Text: Attempting to bind to a registry site using file %s

Explanation: ?

Action: None required.

0x17122f22 sec_site_bind_fail

Severity: Notice **Component:** sec/sec_s_rgybind

Text: Failed to bind to registry site %s\n\t%s

Explanation: ?

Action: None required.

0x17122f20 sec_site_bind_start

Severity: Notice **Component:** sec/sec_s_rgybind

Text: Attempting to bind to registry site %s

Explanation: ?

Action: None required.

0x17122f21 sec_site_bind_succ

Severity: Notice **Component:** sec/sec_s_rgybind

Text: Successfully bound to registry site %s

Explanation: ?

Action: None required.

0x17122f23 sec_site_cell_bind_start

Severity: Notice **Component:** sec/sec_s_rgybind

Text: Attempting to bind to an arbitrary registry site in cell %s

Explanation: ?

Action: None required.

0x17122f28 sec_site_lookup_file

Severity: Notice **Component:** sec/sec_s_rgybind

Text: Retrieving RPC string binding handles for %s from file %s

Explanation: ?

Action: None required.

0x17122f2b sec_site_profile_search_fail

Severity: Notice **Component:** sec/sec_s_rgybind

Text: Search for a security server using profile %s failed\n\t%s

Explanation: ?

Action: None required.

0x17122f29 sec_site_profile_search_start

Severity: Notice **Component:** sec/sec_s_rgybind

Text: Starting search for security server using profile %s

Explanation: ?

Action: None required.

0x17122f2a sec_site_profile_search_succ

Severity: Notice **Component:** sec/sec_s_rgybind

Text: Successfully located security server %s using profile %s

Explanation: ?

Action: None required.

0x17122f27 sec_site_rebind_fail

Severity: Notice **Component:** sec/sec_s_rgybind

Text: Failed to rebind to an alternate registry site\n%s

Explanation: ?

Action: None required.

0x17122f25 sec_site_rebind_start

Severity: Notice **Component:** sec/sec_s_rgybind

Text: Attempting to rebind to an alternate registry site

Explanation: ?

Action: None required.

0x17122f26 sec_site_rebind_succ

Severity: Notice **Component:** sec/sec_s_rgybind

Text: Successfully rebound to registry site %s

Explanation: ?

Action: None required.

0x17122002 sec_s_keytype_unsupp

Severity: Varies **Component:** sec

Text: unsupported session key type

Explanation: Most likely an internal error, caused by a defect in DCE.

Action: Notify support personnel.

0x17122012 sec_s_multiple_u2u_reg

Severity: Varies **Component:** sec

Text: server identity has already been registered

Explanation: rpc_server_register_auth_ident() has been called multiple times. Only one identity may be registered per server.

Action: Fix the application that's making the incorrect call.

0x17122009 sec_s_no_key_seed

Severity: Varies **Component:** sec

Text: no random key seed set yet.

Explanation: Security service has not yet been initialized, so there is no random key seed available.

Action: If this error was encountered in an application, that application should be fixed to initialize credentials before trying to use an API that generates a random key. If this error was encountered within DCE core components then notify support personnel.

0x17122007 sec_s_no_memory

Severity: Varies **Component:** sec

Text: unable to allocate memory.

Explanation: Unable to allocate memory for the requested operation.

Action: Check available system swap space and increase if necessary.

0x17122004 sec_s_none_registered

Severity: Varies **Component:** sec

Text: no identity set yet

Explanation: Application programming error. The server has not yet registered its identity with the security runtime.

Action: Application should register its identity with `rpc_server_register_auth_info()` before this point.

0x17122005 sec_s_no_pac

Severity: Varies **Component:** sec

Text: no privilege attributes available

Explanation: Improperly formed RPC authentication protocol message. Most likely caused by a defect in DCE.

Action: Notify support personnel.

0x17122006 sec_s_not_implemented

Severity: Varies **Component:** sec

Text: operation not implemented

Explanation: Requested operation is not implemented by this version of DCE.

Action: Do not attempt the requested operation with this version of DCE.

0x17122008 sec_s_not_trustworthy

Severity: Varies **Component:** sec

Text: data originated by untrustworthy security/privilege server

Explanation: Client field of an incoming ticket was not the known security/privilege server.

Action: Ensure that error is reproducible and not an artifact of someone attempting to break into the system. If error is reproducible, notify support personnel.

0x1712200a sec_s_null_param_illegal

Severity: Varies **Component:** sec

Text: parameter must be non-NULL

Explanation: A NULL argument was passed to the security API where a real argument was expected.

Action: If error was returned from your application, fix the call to the security API. If the error was returned from a base component of DCE then notify support personnel.

0x1712200c sec_s_pgmerr

Severity: Varies **Component:** sec

Text: security server program error

Explanation: Internal security server error.

Action: Notify DCE support personnel of the problem.

0x17122010 sec_s_svr_type_conflict

Severity: Varies **Component:** sec

Text: simultaneous registration of both keytable and identity not supported

Explanation: Application called both `rpc_server_register_auth_info()` and `rpc_server_register_auth_ident()`.

Action: Application should not call `rpc_server_register_auth_info()` and `rpc_server_register_auth_ident()` within the same process.

0x17122011 sec_s_user_to_user_disabled

Severity: Varies **Component:** sec

Text: account is not allowed to use user-to-user protocol registration

Explanation: Attempted to call `rpc_server_register_auth_ident()` with an identity that does not have the user to user flag set in the registry.

Action: Use `rpc_server_register_auth_info()` keytable based registration, or enable the user-to-user flag on the account.

0x1712200f sec_s_v1_1_no_support

Severity: Varies **Component:** sec

Text: security service does not support version 1.1 security features

Explanation: Client attempted to use a DCE1.1 security feature that the server doesn't support.

Action: Don't try to use a 1.1 feature if your security servers don't support them.

0x17122cd1 sec_svc_cant_get_msg

Severity: Varies **Component:** sec

Text: Unable to get message

Explanation: Serviceability component returns a error.

Action: None required.

0x1712217e sec_svc_not_authorized

Severity: Varies **Component:** sec

Text: Not authorized to perform serviceability operation

Explanation: Caller is not authorized to perform the requested serviceability operation.

Action: Determine who is authorized to perform the operation, then use that identity.

0x17122f6a sec_sys_errno_file_text

Severity: Error **Component:** sec/sec_s_syscall

Text: %s : %s

Explanation: The function call returned -1 and errno was set

Action: The action depends on the actual error.

0x17122f61 sec_sys_errno_text

Severity: Error **Component:** sec/sec_s_syscall

Text: %s failed ; errno text : %s

Explanation: The function call returned -1 and errno was set

Action: The action depends on the actual error.

0x17122f62 sec_sys_errno_text_only

Severity: Varies **Component:** sec

Text: errno text : %s

Explanation: The function call returned -1 and errno was set

Action: No action required. This text is logged by the security server and id almost always followed by another error message. That error message should be consulted for the action to be taken.

0x17122f69 sec_sys_file_ftruncate_fail

Severity: Varies **Component:** sec

Text: File could not be truncated (file descriptor = %d)

Explanation: An attempt to truncate the file using the call ftruncate() failed.

Action: ?

0x17122f63 sec_sys_file_lseek_fail

Severity: Varies **Component:** sec

Text: File seek failed (file descriptor = %d)

Explanation: ?

Action: None required.

0x17122f64 sec_sys_file_open_fail

Severity: Varies **Component:** sec

Text: Failed to open file %s

Explanation: ?

Action: None required.

0x17122f67 sec_sys_file_read_error

Severity: Varies **Component:** sec

Text: File read failed (file descriptor = %d)

Explanation: The requested number of bytes were not read from the file.

Action: ?

0x17122f68 sec_sys_file_write_error

Severity: Varies **Component:** sec

Text: File write failed (file descriptor = %d)

Explanation: The requested number of bytes were not written to the file.

Action: ?

0x17122f42 sec_thr_alert

Severity: Varies **Component:** sec

Text: Thread received an alert exception

Explanation: ?

Action: ?

0x17122f41 sec_thr_exit_cancel

Severity: Varies **Component:** sec

Text: %s thread cancelled. Execution terminated.

Explanation: The thread terminated execution because it received a thread cancel exception.

Action: ?

0x17122f43 sec_thr_exit_exc

Severity: Varies **Component:** sec

Text: Thread exiting due to an exception.

Explanation: The thread terminated execution because it received a exception.

Action: ?

0x17122f40 sec_thr_post_cancel

Severity: Varies **Component:** sec

Text: Posting a cancel to thread %s

Explanation: ?

Action: None required.

0x173ca00a svc_s_acl_corrupt

Severity: Varies **Component:** svc

Text: ACL file corrupt

Explanation: The file that stores the serviceability ACL has been corrupted. The global variable **errno** may contain more information.

Action: Restore the file from your backup and restart.

0x173ca00b svc_s_acl_open_error

Severity: Varies **Component:** svc

Text: ACL file could not be opened

Explanation: The file that stores the serviceability ACL cannot be opened for reading. The global variable **errno** may contain more information.

Action: Check the local file permissions and restart the server.

0x173ca00c svc_s_acl_read_error

Severity: Varies **Component:** svc

Text: ACL file could not be read

Explanation: The file that stores the serviceability ACL cannot be read. The global variable **errno** may contain more information.

Action: Check the system for reports of I/O failures, take the appropriate corrective action, and restart the server.

0x173ca00d svc_s_acl_write_error

Severity: Varies **Component:** svc

Text: ACL file could not be written

Explanation: The file that stores the serviceability ACL cannot be written. The global variable **errno** may contain more information.

Action: Check the system for reports of I/O failures, take the appropriate corrective action, and restart the server.

0x173ca007 svc_s_assertion_failed

Severity: Varies **Component:** svc

Text: Assertion **text** failed in **line**

Explanation: A programmer-developed compile-time assertion failed.

Action: Examine the source code to determine the proper action.

0x173ca006 svc_s_at_end

Severity: Varies **Component:** svc

Text: Reached end of file or argument list

Explanation: No more data is available.

Action: None required.

0x173ca004 svc_s_bad_routespec

Severity: Varies **Component:** svc

Text: Bad routing specification

Explanation: The routing specified in **dce_svc_routing** or **dce_svc_debug_routing** is invalid.

Action: The *where* parameter for **dce_svc_routing**, is a three-field routing specification in the format *severity:how:where*. The *where* parameter for **dce_svc_debug_routing** is a four-field routing specification in the format *component:flags:how:where*.

0x173ca005 svc_s_cantopen

Severity: Varies **Component:** svc

Text: Cannot open specified file

Explanation: Permission was denied or the file does not exist. Verify that the filename is correct or fix the permissions. The global variable **errno** may contain more information.

Action: Correct input and try again.

0x173ca003 **svc_s_no_filter**

Severity: Varies **Component:** svc

Text: No filter defined

Explanation: An attempt was made to send data to the filter-control handle for a component that does not have a filter registered.

Action: Verify the component name or do not invoke the operation.

0x173ca001 **svc_s_no_memory**

Severity: Varies **Component:** svc

Text: Out of memory

Explanation: Could not allocate memory for message table, string copy, or other internal requirement.

Action: Increase the swap or paging space or acquire more physical memory. Also check the program for bugs that resulted in bad pointers corrupting the heap allocation area.

0x173ca009 **svc_s_no_perm**

Severity: Varies **Component:** svc

Text: Permission denied

Explanation: There was insufficient permission to change the routing.

Action: Obtain the correct permission (for example, by modifying the ACL) or do not call this function.

0x173ca008 **svc_s_no_stats**

Severity: Varies **Component:** svc

Text: No statistics available

Explanation: This function is not yet implemented.

Action: Do not call this function.

0x00000000 **svc_s_ok**

Severity: Varies **Component:** svc

Text: Successful completion

Explanation: Operation performed.

Action: None required.

0x173ca002 svc_s_unknown_component

Severity: Varies **Component:** svc

Text: Unknown component

Explanation: An attempt was made to find the service handle for a component and could not do so.

Action: Verify that the component name is known or correct the incorrect reference in the program.

0x1771b008 tcl_s_basic_break_outside_of_loop

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: invoked \"break\" outside of a loop

Explanation: The **break** command is used outside of a loop. This is not syntactically correct.

Action: Check your code and put the **break** command inside of a loop.

0x1771b00a tcl_s_basic_cmd_return_bad_code

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: command returned bad code: %d

Explanation: Return code from the executed command was invalid. It should be either **TCL_BREAK** or **TCL_CONTINUE**.

Action: Application dependent.

0x1771b009 tcl_s_basic_continue_outside_of_loop

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: invoked \"continue\" outside of a loop

Explanation: The **continue** command is used outside of a loop. This is not syntactically correct.

Action: Check your code and put the **continue** command inside a loop.

0x1771b005 tcl_s_basic_interp_init_error

Severity: Unknown **Component:** tcl/tcl_s_general

Text: can't find [info library]/init.tcl; perhaps you need to \n install Tcl or set your TCL_LIBRARY environment variable?

Explanation: Tcl failed at initialization phase.

Action: If **Tcl** is not installed, install it. If you didn't set **TCL_LIBRARY** environment variable, set it and then execute **Tcl** again.

0x1771b007 tcl_s_basic_invalid_cmd_name

Severity: Unknown **Component:** tcl/tcl_s_general

Text: invalid command name: \"%s\"

Explanation: Tcl detected an invalid command name.

Action: Check the spelling of a command. If the spelling is correct, make sure you are using the valid **Tcl** commands or application commands.

0x1771b006 tcl_s_basic_too_many_nested_calls

Severity: Unknown **Component:** tcl/tcl_s_general

Text: too many nested calls to Tcl_Eval (infinite loop?)

Explanation: Tcl detected nested calls too deep to execute.

Action: Check your **Tcl** code to make sure that no infinite loop exists. Usually, an infinite loop is the reason for this error.

0x1771b015 tcl_s_ckalloc_bytes_allocated_at

Severity: Unknown **Component:** tcl/tcl_s_fatal

Text: %d bytes allocated at (%s %d)\n

Explanation: Tcl detected that the internal memory allocation request is invalid.

Action: Write down the message displayed, if possible. Before this message appears, Tcl will dump memory information onto a standard error output (**stderr**), so save the memory dump information with this error message. Then report to a vendor.

0x1771b01f tcl_s_ckalloc_error_accessing

Severity: Unknown
Component: tcl/tcl_s_general

Text: error accessing %s

Explanation: Tcl tried to access a nonexistent variable.

Action: Check the variable name and make sure it exists.

0x1771b017 tcl_s_ckalloc_hi_guard_byte

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: hi guard byte %d is 0x%x \t%c\n

Explanation: Tcl detected that the internal memory allocation request is invalid.

Action: Write down the message displayed, if possible. After this message appears, Tcl will dump memory information onto a standard error output (**stderr**), so save the memory dump information with this error message. Then report to a vendor.

0x1771b018 tcl_s_ckalloc_hi_guard_failed

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: high guard failed at %lx, %s %d\n

Explanation: Tcl detected that the internal memory allocation request is invalid.

Action: Write down the message displayed, if possible. Before this message appears, Tcl will dump memory information onto a standard error output (**stderr**), so save the memory dump information with this error message. Then report to a vendor.

0x1771b013 tcl_s_ckalloc_low_guard_byte

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: low guard byte %d is 0x%x \t%c\n

Explanation: Tcl detected that the internal memory allocation request is invalid.

Action: Write down the message displayed, if possible. After this message appears, Tcl will dump memory information onto a standard error output (**stderr**), so save the memory dump information with this error message. Then report to a vendor.

0x1771b014 tcl_s_ckalloc_low_guard_failed

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: low guard failed at %lx, %s %d\n

Explanation: Tcl detected that the internal memory allocation request is invalid.

Action: Write down the message displayed, if possible. Before this message appears, Tcl will dump memory information onto a standard error output (**stderr**), so save the memory dump information with this error message. Then report to a vendor.

0x1771b016 tcl_s_ckalloc_mem_val_failure

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: Memory validation failure

Explanation: Tcl detected that the internal memory allocation request is invalid.

Action: Write down the message displayed, if possible. Before this message appears, Tcl will dump memory information onto a standard error output (**stderr**), so save the memory dump information with this error message. Then report to a vendor.

0x1771b01b tcl_s_ckalloc_reached_malloc_break_limit

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: reached malloc break limit (%d)\n

Explanation: Tcl detected that too many memory allocation requests were executed internally.

Action: Check your Tcl code and modify the code not to call too many memory allocation commands, like **history**.

0x1771b023 tcl_s_ckalloc_unable_to_alloc

Severity: Unknown
Component: tcl/tcl_s_general

Text: unable to alloc %d bytes

Explanation: The **malloc** function failed. There is no memory left for a new allocation.

Action: Stop any unnecessary process and try again, or add more memory.

0x1771b019 tcl_s_ckalloc_unable_to_alloc_bytes_line

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: unable to alloc %d bytes, %s line %d

Explanation: The **malloc** function failed. There is no memory left for a new allocation.

Action: Stop any unnecessary process and try again, or add more memory.

0x1771b03a tcl_s_cmdah_arg_index_out_of_range

Severity: Unknown
Component: tcl/tcl_s_general

Text: \"%n\$\" argument index out of range

Explanation: The **format** command detected that a number of arguments and number of format specifiers that didn't match.

Action: Check your Tcl code and correct the discrepancy.

0x1771b038 tcl_s_cmdah_bad_field_spec

Severity: Unknown
Component: tcl/tcl_s_general

Text: bad field specifier \"%c\"

Explanation: The **format** command detected that there was an undefined field specifier in a format string.

Action: Check your **Tcl** code and correct the bad field specifier.

0x1771b039 tcl_s_cmdah_cannot_mix_conversion_specs

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: cannot mix \"%\" and \"%n\$\" conversion specifiers

Explanation: The **format** command detected that non-XPG (X/Open Portability Guide) and XPG style format specifiers were mixed in one format string.

Action: Check your **Tcl** code and use either XPG or non-XPG style format specifiers.

0x1771b029 tcl_s_cmdah_could_not_save_cmd_result

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: couldn't save command result in variable

Explanation: **Tcl** could not save the **catch** command execution result into a user specified variable.

Action: Check your **Tcl** code for spelling of the variable. Make sure the variable exists.

0x1771b034 tcl_s_cmdah_could_not_set_loop_var

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: couldn't set loop variable

Explanation: **Tcl** could not set the **foreach** command loop variable.

Action: Check your **Tcl** code for spelling of the variable. Make sure it exists.

0x1771b037 tcl_s_cmdah_fmt_str_ended_in_middle

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: format string ended in middle of field specifier

Explanation: The **format** command detected that the specified format was not complete.

Action: Check your **Tcl** code and complete the format specification.

0x1771b03b tcl_s_cmdah_not_enough_args

Severity: Unknown
Component: tcl/tcl_s_general

Text: not enough arguments for all format specifiers

Explanation: The **format** command detected that there were not enough arguments specified for all the format specifiers.

Action: Check your **Tcl** code and correct the discrepancy.

0x1771b04e tcl_s_cmdil_bad_level

Severity: Unknown
Component: tcl/tcl_s_general

Text: bad level \"%s\"

Explanation: The **info** command detected that the specified level is not correct.

Action: Check your **Tcl** code to make sure the correct level is used.

0x1771b062 tcl_s_cmdil_bad_search_mode

Severity: Unknown
Component: tcl/tcl_s_general

Text: bad search mode \"%s\": must be -exact, -glob, or -regexp

Explanation: The **lsearch** command detected that the specified search mode is not correct.

Action: Check your **Tcl** command and make sure the spelling of search mode is correct.

0x1771b06a tcl_s_cmdil_com_cmd_ret_non_numeric

Severity: Unknown
Component: tcl/tcl_s_general

Text: comparison command returned non-numeric result

Explanation: The **lsort** command detected that the user-defined comparison command failed.

Action: Check your **Tcl** command and correct the comparison command accordingly.

0x1771b066 tcl_s_cmdil_command_not_with_comparison

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: \"-command\" must be followed by comparison command

Explanation: The **lsort** command detected that **-command** option is not used correctly.

Action: Check your **Tcl** command and use the comparison command with this option.

0x1771b04b tcl_s_cmdil_could_not_store_def_val

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: couldn't store default value in variable \"%s\"

Explanation: The **info** command detected that the specified variable cannot be used for storing a default value.

Action: Check your **Tcl** code to make sure the spelling is right for the variable name.

0x1771b05e tcl_s_cmdil_expect_int_or_end

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: expected integer or \"end\" but got \"%s\"

Explanation: The **lrange** command needs an integer or the 'end' keyword for the command syntax.

Action: Check your **Tcl** command and use an integer with the **lrange** command.

0x1771b060 tcl_s_cmdilfst_idx_greater_than_second

Severity: Unknown
Component: tcl/tcl_s_syntax

Text: first index must not be greater than second

Explanation: The **lreplace** command detected that the first index is greater than the second index.

Action: Check your **Tcl** command and specify the larger value for the second index.

0x1771b044 tcl_s_cmdil_is_not_a_proc

Severity: Unknown
Component: tcl/tcl_s_general

Text: \"%s\" isn't a procedure

Explanation: The **info** command detected that the number of arguments specified is not correct.

Action: Check your **Tcl** command and specify the correct procedure name.

0x1771b051 tcl_s_cmdil_no_tcl_library

Severity: Unknown
Component: tcl/tcl_s_general

Text: there is no Tcl library at this installation

Explanation: The **info** command detected that there is no **Tcl** library installed currently.

Action: Install **Tcl** correctly, and try again.

0x1771b04a tcl_s_cmdil_proc_no_argument

Severity: Unknown
Component: tcl/tcl_s_general

Text: procedure \"%s\" doesn't have an argument \"%s\"

Explanation: The **info** command detected that the specified procedure does not have the specified argument.

Action: Check your **Tcl** code to make sure the spelling is right for procedure and argument names.

0x1771b076 tcl_s_cmdmz_bad_comp_code_ok_err_ret_brk

Severity: Unknown **Component:** tcl/tcl_s_general

Text: bad completion code \"%s\": must be ok, error, return, break, continue, or an integer

Explanation: The **return** command detected that a bad switch is used.

Action: Check your **Tcl** command and specify the correct return value for the **return** command.

0x1771b095 tcl_s_cmdmz_bad_opr_more_rwu

Severity: Unknown **Component:** tcl/tcl_s_general

Text: bad operations \"%s\": should be one or more of rwu

Explanation: The **trace** command detected an invalid operation.

Action: Check your **Tcl** command and specify the correct operation.

0x1771b07b tcl_s_cmdmz_bad_scan_conv_char

Severity: Unknown **Component:** tcl/tcl_s_general

Text: bad scan conversion character \"%c\"

Explanation: The **scan** command detected that a wrong conversion character is specified.

Action: Check your **Tcl** command and use the correct conversion character.

0x1771b06f tcl_s_cmdmz_could_not_set_var

Severity: Unknown **Component:** tcl/tcl_s_general

Text: couldn't set variable \"%s\"

Explanation: **Tcl** detected that an error occurred while storing a string into a user-specified variable.

Action: Check your **Tcl** command and make sure you specified an existing variable.

0x1771b073 tcl_s_cmdmz_del_cmd_doesnot_exist

Severity: Unknown
Component: tcl/tcl_s_general

Text: can't delete \"%s\": command doesn't exist

Explanation: The **rename** command detected that the user-specified command does not exist.

Action: Check your **Tcl** command and make sure the command name is spelled right.

0x1771b07c tcl_s_cmdmz_diff_num_var_field

Severity: Unknown
Component: tcl/tcl_s_general

Text: different numbers of variable names and field specifiers

Explanation: The **scan** command detected that the number of variable names differs from the number of field specifiers provided.

Action: Check your **Tcl** command and make the number of variable names and field specifiers the same.

0x1771b06d tcl_s_cmdmz_err_while_match_pat

Severity: Unknown
Component: tcl/tcl_s_general

Text: error while matching pattern: %s

Explanation: **Tcl** detected that an error occurred with regular expression matching.

Action: Check your **Tcl** command and make sure you specified the correct regular expression.

0x1771b086 tcl_s_cmdmz_expt_int_or_end

Severity: Unknown
Component: tcl/tcl_s_general

Text: expected integer or \"end\" but got \"%s\"

Explanation: The **string** command detected that the specified value is invalid.

Action: Check your **Tcl** command and specify the valid value.

0x1771b08c tcl_s_cmdmz_extra_switch_pat_no_body

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: extra switch pattern with no body

Explanation: The **switch** command detected that the number of switch pattern exceeds the number of instructions.

Action: Check your **Tcl** command and specify the missing instructions corresponding to the switch pattern, or delete the switch pattern.

0x1771b07a tcl_s_cmdmz_fid_width_not_be_specified_in_c_conv

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: field width may not be specified in %c conversion

Explanation: The **scan** command detected that the field width is specified with the %c conversion.

Action: Check your **Tcl** command and delete the field width or change the %c conversion.

0x1771b08d tcl_s_cmdmz_no_body_spec_for_pat

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: no body specified for pattern \"%s\"

Explanation: The **switch** command detected that no instructions are specified for the pattern.

Action: Check your **Tcl** command and specify the missing instructions corresponding to the pattern, or delete the pattern.

0x1771b074 tcl_s_cmdmz_rename_cmd_already_exist

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: can't rename to \"%s\": command already exists

Explanation: The **rename** command detected that the user-specified command already exists.

Action: Check your **Tcl** command and make sure the command name is spelled right.

0x1771b075 tcl_s_cmdmz_rename_cmd_doesnot_exist

Severity: Unknown **Component:** tcl/tcl_s_general

Text: can't rename \"%s\": command doesn't exist

Explanation: The **rename** command detected that the user-specified command does not exist.

Action: Check your **Tcl** command and make sure the command name is spelled right.

0x1771b079 tcl_s_cmdmz_too_many_fds_to_scan

Severity: Unknown **Component:** tcl/tcl_s_general

Text: too many fields to scan

Explanation: The **scan** command detected that too many fields are specified.

Action: Check your **Tcl** command and reduce the number of fields.

0x1771b06e tcl_s_cmdmz_too_many_substr_var

Severity: Unknown **Component:** tcl/tcl_s_general

Text: too many substring variables

Explanation: The **regexp** command detected too many substring variables.

Action: Check your **Tcl** command and reduce the number of substring variables.

0x1771b098 tcl_s_env_conf_arguments

Severity: Unknown **Component:** tcl/tcl_s_fatal

Text: EnvTraceProc called with confusing arguments

Explanation: **Tcl** detected the internal inconsistency for the interpreter.

Action: If the whole 'env' variable is being deleted, this message is displayed, and **Tcl** stops execution. This situation usually happens when the whole interpreter is being deleted. Since **Tcl** stops execution, there is nothing you can do at this point. Reexecute the **Tcl**.

0x1771b099 tcl_s_env_no_interpreter

Severity: **Component:** tcl/tcl_s_fatal
Unknown

Text: EnvTraceProc couldn't find interpreter

Explanation: **Tcl** detected the internal inconsistency for the interpreter.

Action: If the whole 'env' variable is being deleted, this message is displayed, and **Tcl** stops execution. This situation usually happens when the whole interpreter is being deleted. Since **Tcl** stops execution, there is nothing you can do at this point. Reexecute the **Tcl**.

0x1771b0a5 tcl_s_expr_arg_math_func_non_numeric

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: argument to math function didn't have numeric value

Explanation: The **expr** command detected that an argument to a mathematical function didn't have a numeric value.

Action: Check your **Tcl** code and make sure you used the correct argument.

0x1771b09f tcl_s_expr_colon_without_question

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: can't have : operator without ? first

Explanation: The **expr** command detected that a colon operator is used without a question mark.

Action: Check your **Tcl** code and add the question mark.

0x1771b09e tcl_s_expr_divide_by_zero

Severity: Unknown
Component: tcl/tcl_s_general

Text: divide by zero

Explanation: The **expr** command detected that a user-supplied expression contains the division by zero.

Action: Check your **Tcl** code and correct the division operation.

0x1771b0a8 tcl_s_expr_domain_err

Severity: Unknown
Component: tcl/tcl_s_general

Text: domain error: argument not in valid range

Explanation: The **expr** command detected that the argument value is out of range (out of a domain).

Action: Check your **Tcl** code and correct the argument to fit in a correct domain.

0x1771b0a7 tcl_s_expr_few_args_for_math_func

Severity: Unknown
Component: tcl/tcl_s_general

Text: too few arguments for math function

Explanation: **expr** command detected too few arguments to mathematical function.

Action: Check your **Tcl** code, and correct the number of arguments.

0x1771b0a1 tcl_s_expr_float_non_numeric_as_op

Severity: Unknown
Component: tcl/tcl_s_general

Text: can't use floating-point value as operand of \"%s\"

Explanation: The **expr** command detected that a floating-point value is used illegally.

Action: Check your **Tcl** code and correct the usage of floating-point.

0x1771b0aa tcl_s_expr_float_val_too_large

Severity: Unknown **Component:** tcl/tcl_s_general

Text: floating-point value too large to represent

Explanation: The **expr** command detected that the supplied floating-point value is too large to represent.

Action: Check your **Tcl** code and correct the floating-point value.

0x1771b0a9 tcl_s_expr_float_val_too_small

Severity: Unknown **Component:** tcl/tcl_s_general

Text: floating-point value too small to represent

Explanation: The **expr** command detected that the supplied floating-point value is too small to represent.

Action: Check your **Tcl** code and correct the floating-point value.

0x1771b09a tcl_s_expr_int_val_too_large

Severity: Unknown **Component:** tcl/tcl_s_general

Text: integer value too large to represent

Explanation: The **expr** command detected that a result of the arithmetic operation overflow.

Action: Check your **Tcl** code and correct your arithmetic expression.

0x1771b0a6 tcl_s_expr_many_args_for_math_func

Severity: Unknown **Component:** tcl/tcl_s_general

Text: too many arguments for math function

Explanation: The **expr** command detected too many arguments to a mathematical function.

Action: Check your **Tcl** code and correct the number of arguments.

0x1771b0a3 tcl_s_expr_non_numeric_exp

Severity: Unknown
Component: tcl/tcl_s_general

Text: expression didn't have numeric value

Explanation: The **expr** command detected that a numeric value didn't exist with a user-supplied expression.

Action: Check your **Tcl** code and correct the expression to use the numeric value.

0x1771b0a2 tcl_s_expr_non_numeric_non_numeric_as_op

Severity: Unknown
Component: tcl/tcl_s_general

Text: can't use non-numeric string as operand of \"%s\"

Explanation: **expr** command detected a floating-point value is used illegally.

Action: Check your **Tcl** code, and correct the usage of floating-point.

0x1771b09b tcl_s_expr_poor_flat_val_form

Severity: Unknown
Component: tcl/tcl_s_general

Text: poorly-formed floating-point value

Explanation: The **expr** command detected that a specified floating-point format is not valid.

Action: Check your **Tcl** code and correct the floating-point format. **Tcl** accepts ANSI C forms, which are something like 2.1, 7.91e+16, 6E4, or 3.

0x1771b0a0 tcl_s_expr_syntax_err

Severity: Unknown
Component: tcl/tcl_s_general

Text: syntax error in expression \"%s\"

Explanation: The **expr** command detected a syntax error in the user-supplied expression.

Action: Check your **Tcl** code and correct the syntax error.

0x1771b0ab tcl_s_expr_unknown_float_point_err

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: unknown floating-point error, errno = %s

Explanation: The **expr** command detected an unknown floating-point error.

Action: Check your **Tcl** code and correct the floating-point operation.

0x1771b0a4 tcl_s_expr_unknown_math_func

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: unknown math function \"%s\"

Explanation: The **expr** command detected that an invalid mathematical function is used.

Action: Check your **Tcl** code and make sure you spelled the mathematical function name correctly.

0x1771b09d tcl_s_expr_unknown_oper_in_expr

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: unknown operator in expression

Explanation: The **expr** command detected an invalid operator in the user-supplied expression.

Action: Check your **Tcl** code and correct the invalid operator.

0x1771b09c tcl_s_expr_unmatch_parens_in_expr

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: unmatched parentheses in expression \"%s\"

Explanation: The **expr** command detected an unmatched parenthesis in the user-supplied expression.

Action: Check your **Tcl** code and correct the unmatched parenthesis.

0x1771b0ae tcl_s_get_exp_boolean_but

Severity: Unknown
Component: tcl/tcl_s_general

Text: expected boolean value but got \"%s\"

Explanation: Tcl detected an invalid string for a Boolean value.

Action: Check your Tcl code and correct the input for a Boolean value.

0x1771b0ad tcl_s_get_exp_float_but

Severity: Unknown
Component: tcl/tcl_s_general

Text: expected floating-point number but got \"%s\"

Explanation: Tcl detected an invalid string for a floating-point number conversion.

Action: Check your Tcl code and correct the input for a floating-point number conversion.

0x1771b0ac tcl_s_get_exp_integer_but

Severity: Unknown
Component: tcl/tcl_s_general

Text: expected integer but got \"%s\"

Explanation: Tcl detected an invalid string for an integer conversion.

Action: Check your Tcl code and correct the input for an integer conversion.

0x1771b0b0 tcl_s_glob_dir_unreadable

Severity: Unknown
Component: tcl/tcl_s_general

Text: couldn't read directory \"%s\": %s

Explanation: The **glob** command could not read the specified directory.

Action: Check your Tcl code and make sure you spelled the directory name correctly.

0x1771b0b6 tcl_s_glob_no_files_match_plural

Severity: Unknown
Component: tcl/tcl_s_general

Text: no files matched glob patterns \"

Explanation: The **glob** command detected that the patterns specified by a user could not match any filename.

Action: Check your **Tcl** command and make sure you spelled glob patterns correctly.

0x1771b0b5 tcl_s_glob_no_files_match_single

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: no files matched glob pattern \"

Explanation: The **glob** command detected that the pattern specified by a user could not match any filename.

Action: Check your **Tcl** command and make sure you spelled glob pattern correctly.

0x1771b0b1 tcl_s_glob_no_home_env

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: couldn't find HOME environment variable to expand \"%s\"

Explanation: The **glob** command could not perform tilde expansion.

Action: Check your **Tcl** code and make sure you spelled the filename correctly.

0x1771b0b2 tcl_s_glob_no_user

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: user \"%s\" doesn't exist

Explanation: The **glob** command could not find a user for tilde expansion.

Action: Check your **Tcl** code and make sure you spelled the filename correctly.

0x1771b0af tcl_s_glob_unmatched_open_brace

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: unmatched open-brace in file name

Explanation: The **glob** command detected that unmatched open brace is used within a filename.

Action: Check your **Tcl** code and correct the unmatched open brace in a filename.

0x1771b0b7 tcl_s_hash_bad_bucket_chain

Severity: Unknown
Component: tcl/tcl_s_general

Text: malformed bucket chain in Tcl_DeleteHashEntry

Explanation: **Tcl** detected a bad hash table entry in the **Tcl_DeleteHashEntry** function.

Action: Check your **Tcl** command and make sure you do not attempt to delete a non existing hash entry.

0x1771b0bd tcl_s_hash_bogus_create

Severity: Unknown
Component: tcl/tcl_s_general

Text: called Tcl_CreateHashEntry on deleted table

Explanation: **Tcl** detected that a nonexisting table is used for the **Tcl_CreateHashEntry** function.

Action: Check your **Tcl** command, and make sure you do not attempt to use a nonexisting hash table.

0x1771b0bc tcl_s_hash_bogus_find

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: called Tcl_FindHashEntry on deleted table

Explanation: **Tcl** detected that a nonexisting table is used for the **Tcl_FindHashEntry** function.

Action: Check your **Tcl** command, and make sure you do not attempt to use a nonexisting hash table.

0x1771b0ce tcl_s_hist_evt_does_not_appear

Severity: Unknown
Component: tcl/tcl_s_general

Text: \"%s\" doesn't appear in event

Explanation: The **history** command substitution failed because a specified string didn't match any of the events in a history.

Action: Check your **Tcl** command and specify the correct event for a **history** command.

0x1771b0cb tcl_s_hist_evt_has_not_occurred

Severity: Unknown **Component:** tcl/tcl_s_general

Text: event \"%s\" hasn't occurred yet

Explanation: The **history** command detected that the specified event hasn't occurred yet.

Action: Check your **Tcl** command and specify the correct event for a **history** command.

0x1771b0cd tcl_s_hist_evt_no_matches

Severity: Unknown **Component:** tcl/tcl_s_general

Text: no event matches \"%s\"

Explanation: The **history** command detected that the specified string didn't match any of the events in a history.

Action: Check your **Tcl** command and specify the correct event for a **history** command.

0x1771b0cc tcl_s_hist_evt_too_far_past

Severity: Unknown **Component:** tcl/tcl_s_general

Text: event \"%s\" is too far in the past

Explanation: The **history** command detected that the specified event was executed too far behind to parse.

Action: Check your **Tcl** command and specify the correct event for a **history** command.

0x1771b0cf tcl_s_hist_evt_word_sele_non_existent

Severity: Unknown
Component: tcl/tcl_s_general

Text: word selector \"%s\" specified non-existent words

Explanation: The **history** command detected that the word selector specified nonexistent words.

Action: Check your **Tcl** command and specify the correct word selector for a **history** command.

0x1771b0ca tcl_s_hist_hist_assert_failed

Severity: Unknown
Component: tcl/tcl_s_general

Text: Assertion failed!

Explanation: The **history** command tried a history revision, but the amount of space needed for the revised event was too large.

Action: Check your **Tcl** command and make sure your history revision command is correct.

0x1771b0c4 tcl_s_hist_illegal_keep_count

Severity: Unknown
Component: tcl/tcl_s_general

Text: illegal keep count \"%s\"

Explanation: The **history** command detected that the number specified for the keep count is not correct.

Action: Check your **Tcl** command and specify the correct keep count. The keep count should not be negative, and less than 1000.

0x1771b0e6 tcl_s_link_bad_linked_var_type

Severity: Unknown
Component: tcl/tcl_s_general

Text: internal error: bad linked variable type

Explanation: Tcl detected a bad linked variable type. This is an internal error, which indicates Tcl could not recognize C variable value.

Action: Check your Tcl command and make sure your C variable is one of `TCL_LINK_INT`, `TCL_LINK_DOUBLE`, `TCL_LINK_BOOLEAN`, or `TCL_LINK_STRING`.

0x1771b0e7 tcl_s_link_linked_var_read_only

Severity: Unknown **Component:** tcl/tcl_s_general

Text: linked variable is read-only

Explanation: Tcl detected that a linked variable specified is read-only.

Action: Check your Tcl command and make sure you do not try to write a read-only linked variable.

0x1771b0e8 tcl_s_link_linked_var_unreadable

Severity: Unknown **Component:** tcl/tcl_s_fatal

Text: internal error: linked variable couldn't be read

Explanation: Tcl detected that a linked variable could not be read. This is an internal error and should not happen.

Action: Keep your TCL script and report to the vendor.

0x1771b0eb tcl_s_link_var_must_be_bool

Severity: Unknown **Component:** tcl/tcl_s_general

Text: variable must have boolean value

Explanation: Tcl detected that a nonreal value is used for the `TCL_LINK_BOOLEAN` type linked variable.

Action: Check your Tcl command and make sure to store the Boolean value to the linked variable.

0x1771b0e9 tcl_s_link_var_must_be_integer

Severity: Unknown **Component:** tcl/tcl_s_general

Text: variable must have integer value

Explanation: **Tcl** detected that noninteger value is used for the **TCL_LINK_INT** type linked variable.

Action: Check your **Tcl** command and make sure to store an integer value to the linked variable.

0x1771b0ea tcl_s_link_var_must_be_real

Severity: Unknown
Component: tcl/tcl_s_general

Text: variable must have real value

Explanation: **Tcl** detected that a nonreal value is used for the **TCL_LINK_DOUBLE** type linked variable.

Action: Check your **Tcl** command and make sure to store a real value to the linked variable.

0x1771b0d1 tcl_s_main_appl_init_failed

Severity: Unknown
Component: tcl/tcl_s_general

Text: Tcl_AppInit failed: %s\n

Explanation: An application-specified initialization for **Tcl** failed.

Action: Check your **Tcl** command and make sure your initialization procedure is correct.

0x1771b1a0 tcl_s_multibyte_conv_failed

Severity: Unknown
Component: tcl/tcl_s_general

Text: multi-byte to wide character conversion failed for \"%s\"

Explanation: **mbstowcs** routine failed internally.

Action: Check if you set a correct **locale** for your environment. If the locale is the right one, check your program logic to make sure that it does not generate a bad multibyte sequence. Then report the problem to the vendor with the error message.

0x1771b0d8 tcl_s_parse_extra_char_brace

Severity: Unknown **Component:** tcl/tcl_s_general

Text: extra characters after close-brace

Explanation: Tcl detected, in a braces-quoted string parsing, that extra characters exists.

Action: Check your Tcl command and delete the extra characters.

0x1771b0d7 tcl_s_parse_extra_char_quote

Severity: Unknown **Component:** tcl/tcl_s_general

Text: extra characters after close-quote

Explanation: Tcl detected, in a double-quoted string parsing, that extra characters exists.

Action: Check your Tcl command and delete the extra characters.

0x1771b0d4 tcl_s_parse_missing_c

Severity: Unknown **Component:** tcl/tcl_s_general

Text: missing %c

Explanation: Tcl detected, in a double-quoted string parsing, that a terminal character is missing.

Action: Check your Tcl command and make sure you are terminating (closing) the double-quoted string.

0x1771b0d5 tcl_s_parse_missing_close_brace

Severity: Unknown **Component:** tcl/tcl_s_general

Text: missing close-brace

Explanation: Tcl detected, in a braces-quoted string parsing, that a closing brace is missing.

Action: Check your **Tcl** command and make sure you are closing a braces-quoted string.

0x1771b0d9 tcl_s_parse_missing_close_brace_var

Severity: Unknown
Component: tcl/tcl_s_general

Text: missing close-brace for variable name

Explanation: **Tcl** detected, in a string parsing, that a variable name is not enclosed within braces.

Action: Check your **Tcl** command and add a closing brace.

0x1771b0d6 tcl_s_parse_missing_close_bracket

Severity: Unknown
Component: tcl/tcl_s_general

Text: missing close-bracket

Explanation: **Tcl** detected, in a bracket-quoted string parsing, that a closing bracket is missing.

Action: Check your **Tcl** command and make sure you are closing a bracket-quoted string.

0x1771b0de tcl_s_proc_bad_level

Severity: Unknown
Component: tcl/tcl_s_general

Text: bad level \"%s\"

Explanation: The **uplevel** or **upvar** command detected that wrong level information was given.

Action: Check your **Tcl** command and give the correct level information.

0x1771b0e4 tcl_s_proc_break_outside_loop

Severity: Unknown
Component: tcl/tcl_s_general

Text: invoked \"break\" outside of a loop

Explanation: **Tcl** detected, in the course of executing a user-defined procedure, that **break** is invoked outside of a loop.

Action: Check your **Tcl** command and put the **break** command within a loop.

0x1771b0e2 tcl_s_proc_called_with_too_many_args

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: called \"%s\" with too many arguments

Explanation: **Tcl** detected that there were too many arguments specified to a user-defined procedure.

Action: Check your **Tcl** command and specify the correct arguments.

0x1771b0e5 tcl_s_proc_continue_outside_loop

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: invoked \"continue\" outside of a loop

Explanation: **Tcl** detected, in the course of executing a user-defined procedure, that **continue** is invoked outside of a loop.

Action: Check your **Tcl** command and put the **continue** command within a loop.

0x1771b0dd tcl_s_proc_no_name_arg

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: procedure \"%s\" has argument with no name

Explanation: The **proc** command detected an argument without the name given.

Action: Check your **Tcl** command and give all arguments names.

0x1771b0e1 tcl_s_proc_no_val_given_to_par

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: no value given for parameter \"%s\" to \"%s\"

Explanation: **Tcl** detected that there was no value specified for a parameter to a user-defined procedure.

Action: Check your **Tcl** command and give the value to a parameter.

0x1771b0dc tcl_s_proc_too_many_fds_in_arg

Severity: Unknown
Component: tcl/tcl_s_general

Text: too many fields in argument specifier \"%s\"

Explanation: The **proc** command detected that an argument contains too many fields.

Action: Check your **Tcl** command and specify the correct argument.

0x1771b1a1 tcl_s_single_multibyte_conv_failed

Severity: Unknown
Component: tcl/tcl_s_general

Text: multi-byte to wide character conversion failed for \"%c\"

Explanation: **mbtowc** routine failed internally.

Action: Check if you set a correct **locale** for your environment. If the locale is the right one, check your program logic to make sure that it does not generate a bad multibyte sequence. Then report the problem to the vendor with the error message.

0x1771b189 tcl_s_tclregexp_corrupted_opcode

Severity: Unknown
Component: tcl/tcl_s_general

Text: corrupted opcode

Explanation: While matching a regular expression, **Tcl** detected the internal operation code (opcode) for this operation was corrupted.

Action: Check **errorInfo** global variable information and report the problem to the vendor.

0x1771b182 tcl_s_tclregexp_corrupted_pgm

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: corrupted program

Explanation: While matching a regular expression, **Tcl** detected that the internal **regexp** program was wrong.

Action: Check **errorInfo** global variable information and report the problem to the vendor.

0x1771b184 tcl_s_tclregexp_corrupted_ptr

Severity: **Component:** tcl/tcl_s_fatal
Unknown

Text: corrupted pointers

Explanation: While matching a regular expression, **Tcl** detected the discrepancy between pointers.

Action: Check **errorInfo** global variable information and report the problem to the vendor.

0x1771b17e tcl_s_tclregexp_follows_nothing

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: ?+* follows nothing

Explanation: While compiling a regular expression, **Tcl** detected that **?**, **+**, or ***** didn't follow anything meaningful.

Action: Check your regular expression given to **Tcl** and correct the problem.

0x1771b180 tcl_s_tclregexp_int_disaster

Severity: **Component:** tcl/tcl_s_fatal
Unknown

Text: internal disaster

Explanation: While compiling a regular expression, **Tcl** detected that the **strcspn** system call failed.

Action: Check **errorInfo** global variable information and report the problem to the vendor.

0x1771b185 tcl_s_tclregexp_internal_foulup

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: internal foulup

Explanation: While matching a regular expression, **Tcl** detected the internal discrepancy within the **regrepeat** internal routine.

Action: Check **errorInfo** global variable information and report the problem to the vendor.

0x1771b17d tcl_s_tclregexp_internal_urp

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: internal inconsistency found

Explanation: While compiling a regular expression, **Tcl** detected some internal inconsistency. This error takes place within the **regatom** internal routine, and it should not happen.

Action: Check **errorInfo** global variable information and report the problem to the vendor.

0x1771b17b tcl_s_tclregexp_invalid_squ_range

Severity: Unknown
Component: tcl/tcl_s_general

Text: invalid [] range

Explanation: While compiling a regular expression, **Tcl** detected that the range given with brackets was wrong.

Action: Check your regular expression given to **Tcl**. Correct the invalid range within the brackets.

0x1771b178 tcl_s_tclregexp_junk_end

Severity: Unknown
Component: tcl/tcl_s_general

Text: junk on end

Explanation: While compiling a regular expression, **Tcl** detected that some unrecognized string followed the regular expression.

Action: Check your regular expression given to **Tcl** and delete an extra string from an end of the regular expression.

0x1771b183 tcl_s_tclregexp_mem_corruption

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: memory corruption

Explanation: While matching a regular expression, **Tcl** detected that the internal memory was corrupted, so it could not continue processing.

Action: Check **errorInfo** global variable information and report the problem to the vendor.

0x1771b17a tcl_s_tclregexp_nested_ops

Severity: Unknown
Component: tcl/tcl_s_general

Text: nested *?+

Explanation: While compiling a regular expression, **Tcl** detected that the *, +, or ? operand is used within a nested structure.

Action: Check your regular expression given to **Tcl**. You cannot use the *, ?, or + operand within a nested structure.

0x1771b173 tcl_s_tclregexp_null_arg

Severity: Unknown
Component: tcl/tcl_s_general

Text: NULL argument

Explanation: While compiling a regular expression, **Tcl** detected no regular expression was passed to the routine.

Action: Check your regular expression given to **Tcl** and correct the problem.

0x1771b181 tcl_s_tclregexp_null_parameter

Severity: Unknown
Component: tcl/tcl_s_general

Text: NULL parameter

Explanation: While matching a regular expression, **Tcl** detected that either the regular expression or the string matching against the regular expression was **NULL**.

Action: Check your regular expression given to **Tcl** and correct the problem.

0x1771b179 tcl_s_tclregexp_op_can_be_empty

Severity: Unknown
Component: tcl/tcl_s_general

Text: *+ operand could be empty

Explanation: While compiling a regular expression, **Tcl** detected an illegal use of the * or + operand.

Action: Check your regular expression given to **Tcl**. This error occurs when the * or + operand was applied to a possibly null operand.

0x1771b175 tcl_s_tclregexp_out_of_space

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: out of space

Explanation: While compiling a regular expression, **Tcl** could not allocate a necessary amount of memory.

Action: Check your regular expression given to **Tcl** and reduce the complexity of the regular expression. Kill unnecessary processes and try again, or add more memory.

0x1771b174 tcl_s_tclregexp_too_big

Severity: Unknown
Component: tcl/tcl_s_general

Text: regexp too big

Explanation: While compiling a regular expression, **Tcl** detected that the regular expression was too big to process.

Action: Check your regular expression given to **Tcl** and correct the problem.

0x1771b176 tcl_s_tclregexp_too_many_bra

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: too many ()

Explanation: While compiling a regular expression, **Tcl** detected that too many parentheses were used.

Action: Check your regular expression given to **Tcl** and reduce the number of parentheses used.

0x1771b17f tcl_s_tclregexp_trailing_backslash

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: trailing backslash

Explanation: While compiling a regular expression, **Tcl** detected that a backslash is the last character for the regular expression given.

Action: Check your regular expression given to **Tcl** and correct the problem.

0x1771b177 tcl_s_tclregexp_unmatch_br

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: unmatched ()

Explanation: While compiling a regular expression, **Tcl** detected the incomplete parentheses.

Action: Check your regular expression given to **Tcl** and complete the parentheses used.

0x1771b17c tcl_s_tclregexp_unmatch_squ_bra

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: unmatched []

Explanation: While compiling a regular expression, **Tcl** detected that incomplete brackets were used.

Action: Check your regular expression given to **Tcl**. Complete the erroneous bracket expression.

0x1771b16f tcl_s_tclutil_bad_index

Severity: Unknown
Component: tcl/tcl_s_general

Text: bad index \"%s\": must be integer or \"end\"

Explanation: **Tcl** failed to parse a list index.

Action: Check your **Tcl** command and change the bad string to an integer or **end** keyword.

0x1771b172 tcl_s_tclutil_improp_val_prec

Severity: Unknown
Component: tcl/tcl_s_general

Text: improper value for precision

Explanation: **Tcl** detected a format conversion error in printing a value for the **Tcl_PrintDouble** procedure.

Action: Check your regular expression given to **Tcl**. The reason why compiling the regular expression failed is also displayed.

0x1771b16e tcl_s_tclutil_internal_err_splitlist

Severity: Unknown
Component: tcl/tcl_s_general

Text: internal error in Tcl_SplitList

Explanation: **Tcl** detected an invalid list structure. **Tcl_SplitList** failed internally.

Action: Check **errorInfo** global variable information and figure out where the problem took place, then correct it.

0x1771b16a tcl_s_tclutil_list_ele_in_braces

Severity: Unknown
Component: tcl/tcl_s_general

Text: list element in braces followed by \"%.*s\" instead of space

Explanation: **Tcl** detected an invalid list structure. The list element in braces should be followed by space.

Action: Check your **Tcl** command and modify the list structure.

0x1771b16b tcl_s_tclutil_list_ele_in_quotes

Severity: Unknown **Component:** tcl/tcl_s_general

Text: list element in quotes followed by \"%.*s\" instead of space

Explanation: **Tcl** detected an invalid list structure. The list element in quotes should be followed by space.

Action: Check your **Tcl** command and modify the list structure.

0x1771b170 tcl_s_tclutil_reg_compile_err

Severity: Unknown **Component:** tcl/tcl_s_general

Text: couldn't compile regular expression pattern: %s

Explanation: **Tcl** detected an error while compiling the regular expression given.

Action: Check your regular expression given to **Tcl**. The reason why compiling the regular expression failed is also displayed.

0x1771b171 tcl_s_tclutil_reg_match_err

Severity: Unknown **Component:** tcl/tcl_s_general

Text: error while matching regular expression: %s

Explanation: **Tcl** detected an error while performing regular expression matching operation.

Action: Check your regular expression given to **Tcl**. The reason why compiling the regular expression failed is also displayed.

0x1771b16c tcl_s_tclutil_unmatch_open_brace

Severity: Unknown **Component:** tcl/tcl_s_general

Text: unmatched open brace in list

Explanation: Tcl detected an invalid list structure. The list was not terminated by a closing brace.

Action: Check your **Tcl** command and modify the list structure.

0x1771b16d tcl_s_tclutil_unmatch_open_quote

Severity: Unknown
Component: tcl/tcl_s_general

Text: unmatched open quote in list

Explanation: Tcl detected an invalid list structure. The list was not terminated by a closing quote.

Action: Check your **Tcl** command and modify the list structure.

0x1771b19f tcl_s_tclvar_dangling_upvar

Severity: Unknown
Component: tcl/tcl_s_general

Text: upvar refers to element in deleted array

Explanation: Tcl detected that the array didn't exist.

Action: Check your **Tcl** code to make sure you spelled the element name correctly.

0x1771b19a tcl_s_tclvar_illegal_search

Severity: Unknown
Component: tcl/tcl_s_general

Text: couldn't find search \"%s\"

Explanation: Tcl detected that the specified search failed.

Action: Depends on the application.

0x1771b198 tcl_s_tclvar_illegal_search_id

Severity: Unknown
Component: tcl/tcl_s_general

Text: illegal search identifier \"%s\"

Explanation: Tcl detected that the specified search identifier was wrong.

Action: Check **Tcl** code and correct the search identifier.

0x1771b19d tcl_s_tclvar_is_array

Severity: Unknown **Component:** tcl/tcl_s_general

Text: variable is array

Explanation: Tcl detected that the variable specified by the user was an array.

Action: Check your **Tcl** code to make sure you spelled the variable name correctly.

0x1771b18e tcl_s_tclvar_isnt_array

Severity: Unknown **Component:** tcl/tcl_s_general

Text: \"%s\" isn't an array

Explanation: The **array** command detected that the argument specified was not an array.

Action: Check the **Tcl** code and specify an array to the **array** command.

0x1771b19e tcl_s_tclvar_need_array

Severity: Unknown **Component:** tcl/tcl_s_general

Text: variable isn't array

Explanation: Tcl detected that the variable specified by the user was not an array.

Action: Check your **Tcl** code to make sure you spelled the variable name correctly.

0x1771b19c tcl_s_tclvar_no_such_ele

Severity: Unknown **Component:** tcl/tcl_s_general

Text: no such element in array

Explanation: Tcl detected that the element specified by the user didn't exist in an array.

Action: Check your **Tcl** code to make sure you spelled the element name correctly.

0x1771b19b tcl_s_tclvar_no_such_var

Severity: Unknown
Component: tcl/tcl_s_general

Text: no such variable

Explanation: **Tcl** detected that the variable specified by the user was wrong.

Action: Check your **Tcl** code to make sure you spelled the variable name correctly.

0x1771b199 tcl_s_tclvar_search_id_var

Severity: Unknown
Component: tcl/tcl_s_general

Text: search identifier \"%s\" isn't for variable \"%s\"

Explanation: **Tcl** detected that the specified search identifier and variable combination was wrong.

Action: Check your **Tcl** code and correct the search identifier or the variable displayed.

0x1771b196 tcl_s_tclvar_var_already_exists

Severity: Unknown
Component: tcl/tcl_s_general

Text: variable \"%s\" already exists

Explanation: The **upvar** or **global** command detected that the specified variable already exists.

Action: Check your **Tcl** code and correct the spelling of variable, or make sure the variable does not exist.

0x1771b0ee tcl_s_test_bogus_interpreter

Severity: Unknown
Component: tcl/tcl_s_general

Text: bogus interpreter argument!

Explanation: Tcl detected that the interpreter passed to **Tcl_CallWhenDeleted** was not valid.

Action: Check your **Tcl** command and make sure to pass the valid interpreter to the **Tcl_CallWhenDeleted** call.

0x1771b118 tcl_s_unixaz_access_mode_must_inc

Severity: Unknown **Component:** tcl/tcl_s_general

Text: access mode must include either RDONLY, WRONLY, or RDWR

Explanation: The **open** command detected that the access mode didn't include the required mode.

Action: Check your **Tcl** command and add the necessary access mode.

0x1771b116 tcl_s_unixaz_access_mode_not_supported

Severity: Unknown **Component:** tcl/tcl_s_general

Text: access mode \"%s\" not supported by this system

Explanation: The **open** command detected that the access mode specified was not supported.

Action: The **NOCTTY** access mode is not supported by this system. Do not use it.

0x1771b0f6 tcl_s_unixaz_cannot_change_work_dir

Severity: Unknown **Component:** tcl/tcl_s_general

Text: couldn't change working directory to \"%s\": %s

Explanation: The **cd** command could not change the current working directory to a user-specified directory.

Action: Check your **Tcl** command and make sure you spelled a directory name correctly, or that the directory exists.

0x1771b111 tcl_s_unixaz_cannot_open

Severity: Unknown **Component:** tcl/tcl_s_general

Text: couldn't open \"%s\": %s

Explanation: The **open** command could not open the specified file.

Action: Check your **Tcl** command and make sure you spelled a filename correctly, or that the file exists.

0x1771b112 tcl_s_unixaz_cannot_read_output

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: can't read output from command: standard output was redirected

Explanation: The **open** command detected that standard output was redirected.

Action: Check your **Tcl** command and correct the wrong redirection.

0x1771b113 tcl_s_unixaz_cannot_write_input

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: can't write input to command: standard input was redirected

Explanation: The **open** command detected that standard input was redirected.

Action: Check your **Tcl** command and correct the wrong redirection.

0x1771b12c tcl_s_unixaz_child_abend_exit

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: child process exited abnormally

Explanation: The **Tcl** command failed, and the child process existed abnormally.

Action: Check other **Tcl** error messages within the **errorInfo** global variable, then correct the failed **Tcl** command.

0x1771b128 tcl_s_unixaz_child_killed

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: child killed: %s\n

Explanation: The **Tcl** command failed, and the child process was killed.

Action: Check other **Tcl** error messages within the **errorInfo** global variable, then correct the failed **Tcl** command.

0x1771b12a tcl_s_unixaz_child_st_no_sense

Severity: Unknown **Component:** tcl/tcl_s_general

Text: child wait status didn't make sense\n

Explanation: The **Tcl** command failed, and the child wait status was wrong.

Action: Check other **Tcl** error messages within the **errorInfo** global variable, then correct the failed **Tcl** command.

0x1771b129 tcl_s_unixaz_child_suspended

Severity: Unknown **Component:** tcl/tcl_s_general

Text: child suspended: %s\n

Explanation: The **Tcl** command failed, and the child process was suspended.

Action: Check other **Tcl** error messages within the **errorInfo** global variable, then correct the failed **Tcl** command.

0x1771b11e tcl_s_unixaz_cwd_name_too_long

Severity: Unknown **Component:** tcl/tcl_s_general

Text: working directory name is too long

Explanation: The **pwd** command noticed the supplied directory name was too long to process.

Action: Check your **Tcl** command and make the directory name shorter.

0x1771b0f8 tcl_s_unixaz_error_closing

Severity: Unknown **Component:** tcl/tcl_s_general

Text: error closing \"%s\": %s\n

Explanation: The **close** command could not close the specified file.

Action: Check your **Tcl** command and make sure you spelled a filename correctly, or that the file exists.

0x1771b123 tcl_s_unixaz_error_during_seek

Severity: Unknown **Component:** tcl/tcl_s_fatal

Text: error during seek: %s

Explanation: The **seek** command detected that the **fseek** system call failed.

Action: Write down your **Tcl** command and the error message, then report to the vendor.

0x1771b10d tcl_s_unixaz_error_flushing

Severity: Unknown **Component:** tcl/tcl_s_general

Text: error flushing \"%s\": %s

Explanation: The **flush** command could not flush the specified file.

Action: Check your **Tcl** command and make sure you spelled a filename correctly, or that the file exists.

0x1771b0fb tcl_s_unixaz_error_read_from_out_pipe

Severity: Unknown **Component:** tcl/tcl_s_fatal

Text: error reading from output pipe: %s

Explanation: The **exec** command detected that the reading from output pipe failed.

Action: Save your **Tcl** script, write down the error message, and report to the vendor.

0x1771b10f tcl_s_unixaz_error_reading

Severity: Unknown **Component:** tcl/tcl_s_fatal

Text: error reading \"%s\": %s

Explanation: The **gets** command could not read the specified file.

Action: Write down your **Tcl** command and the error message, then report to the vendor.

0x1771b12b tcl_s_unixaz_error_read_stderr

Severity: **Component:** tcl/tcl_s_fatal
Unknown

Text: error reading stderr output file: %s

Explanation: The **read** system call failed internally.

Action: Write down your **Tcl** command and the error message, then report to the vendor.

0x1771b127 tcl_s_unixaz_error_wait_exit

Severity: **Component:** tcl/tcl_s_fatal
Unknown

Text: error waiting for process to exit: %s

Explanation: The **waitpid** system call failed internally.

Action: Write down your **Tcl** command and the error message, then report to the vendor.

0x1771b11f tcl_s_unixaz_error_with_cwd_name

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: error getting working directory name: %s

Explanation: The **pwd** command could not get the current directory name.

Action: Check your **Tcl** command and make sure you spelled the directory name correctly, or verify that the directory exists.

0x1771b11c tcl_s_unixaz_error_writing

Severity: **Component:** tcl/tcl_s_fatal
Unknown

Text: error writing \"%s\": %s

Explanation: The **puts** command could not write to the specified file.

Action: Write down your **Tcl** command and the error message, then report to the vendor.

0x1771b114 tcl_s_unixaz_illegal_access_mode

Severity: Unknown
Component: tcl/tcl_s_general

Text: illegal access mode \"%s\"

Explanation: The **open** command detected that the access mode specified was illegal.

Action: Check your **Tcl** command and correct the wrong access mode. The valid access modes are **r**, **w**, and **a**.

0x1771b117 tcl_s_unixaz_invalid_access_mode

Severity: Unknown
Component: tcl/tcl_s_general

Text: invalid access mode \"%s\": must be RDONLY, WRONLY, RDWR, APPEND, CREAT, EXCL, NOCTTY, NONBLOCK, or TRUNC

Explanation: The **open** command detected that the access mode specified was wrong.

Action: Check your **Tcl** command and correct the wrong access mode as specified.

0x1771b100 tcl_s_unixaz_no_lstat

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: couldn't lstat \"%s\": %s

Explanation: The **file** command detected that the **lstat** command failed with a user-specified argument.

Action: Save your **Tcl** script, write down the error message, and report to the vendor. This error indicates that the **lstat** system call failed.

0x1771b101 tcl_s_unixaz_no_readlink

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: couldn't readlink \"%s\": %s

Explanation: The **file** command detected that the **readlink** operation failed with a user-specified argument.

Action: Save your **Tcl** script, write down the error message, and report to the vendor. This error indicates that the **readlink** system call failed.

0x1771b103 tcl_s_unixaz_no_stat

Severity: **Component:** tcl/tcl_s_fatal
Unknown

Text: couldn't stat \"%s\": %s

Explanation: The **file** command detected that the **stat** command failed with a user specified-argument.

Action: Save your **Tcl** script, write down the error message, and report to the vendor. This error indicates that the **stat** system call failed.

0x1771b12d tcl_s_unixstr_unknown_err

Severity: **Component:** tcl/tcl_s_fatal
Unknown

Text: unknown error

Explanation: The **Tcl** command failed, and the current **errno** value was not recognized.

Action: Check other **Tcl** error messages within the **errorInfo** global variable, then guess the cause of failure. If you cannot make any guess, report to the vendor.

0x1771b12e tcl_s_unixstr_unknown_signal

Severity: **Component:** tcl/tcl_s_fatal
Unknown

Text: unknown signal

Explanation: The **Tcl** command execution generated a signal, but **Tcl** could not recognize the signal.

Action: Check other **Tcl** error messages within the **errorInfo** global variable, then guess the cause of failure. If you cannot make any guess, report to the vendor.

0x1771b166 tcl_s_unixutil_bad_file_id

Severity: Unknown
Component: tcl/tcl_s_general

Text: bad file identifier \"%s\"

Explanation: Tcl detected that a file ID passed to the **Tcl_GetOpenFile** routine was invalid.

Action: Check **errorInfo** global variable information and figure out where the problem took place, then correct it.

0x1771b15c tcl_s_unixutil_cannot_create_input_pipe

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: couldn't create the input pipe for command: %s

Explanation: Tcl could not create the input pipe specified.

Action: The **pipe** system call failed internally. The reason why the **pipe** system call failed is also displayed. After you examine **errorInfo** global variable information and cannot make sense, report the error to the vendor.

0x1771b15d tcl_s_unixutil_cannot_create_output_pipe

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: couldn't create output pipe: %s

Explanation: Tcl could not create the output pipe specified.

Action: The **pipe** system call failed internally. The reason why the **pipe** system call failed is also displayed. After you examine **errorInfo** global variable information and cannot make sense, report the error to the vendor.

0x1771b160 tcl_s_unixutil_cannot_create_pipe

Severity: Unknown
Component: tcl/tcl_s_general

Text: couldn't create pipe: %s

Explanation: Tcl could not create a specified pipe.

Action: The **pipe** system call failed internally. The reason why the **pipe** system call failed is also displayed. After you examine **errorInfo** global variable information and cannot make sense, report the error to the vendor.

0x1771b15e tcl_s_unixutil_cannot_creat_err_file

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: couldn't create error file for command: %s

Explanation: Tcl could not create error file with a command that uses a pipeline.

Action: The **open** system call failed internally. Check the permission of a directory in which your **Tcl** command tried to create a file. The reason why the **open** system call failed is also displayed.

0x1771b159 tcl_s_unixutil_cannot_creat_input_file

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: couldn't create input file for command: %s

Explanation: Tcl could not create input file with a command that uses a pipeline.

Action: The **open** system call failed internally. Check the permission of a directory in which your **Tcl** command tried to create a file. The reason why the **open** system call failed is also displayed.

0x1771b162 tcl_s_unixutil_cannot_fork_chld_proc

Severity: **Component:** tcl/tcl_s_fatal
Unknown

Text: couldn't fork child process: %s

Explanation: Tcl could not fork a child process.

Action: The **fork** system call failed internally. The reason why the **pipe** system call failed is also displayed. After you examine **errorInfo** global variable information and cannot make sense, report the error to the vendor.

0x1771b165 tcl_s_unixutil_cannot_read_file

Severity: **Component:** tcl/tcl_s_fatal
Unknown

Text: couldn't read file \"%s\": %s

Explanation: Tcl could not read a file.

Action: The **open** system call failed internally while processing redirection. The reason why the **open** system call failed is also displayed. Check your **Tcl** command to make sure the file you specified exists. After you examine **errorInfo** global variable information and cannot make sense, report the error to the vendor.

0x1771b15f tcl_s_unixutil_cannot_remove_err_file

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: couldn't remove error file for command: %s

Explanation: Tcl could not remove file with a command that uses pipeline.

Action: The **unlink** system call failed internally. The reason why the **unlink** system call failed is also displayed. After you examine **errorInfo** global variable information and cannot make sense, report the error to the vendor.

0x1771b15b tcl_s_unixutil_cannot_reset_remove_file

Severity: Unknown
Component: tcl/tcl_s_general

Text: couldn't reset or remove input file for command: %s

Explanation: Tcl could not reset a file pointer or remove a file with a command that uses pipeline.

Action: The **lseek** or **unlink** system call failed internally. The reason why the **seek** or **unlink** system call failed is also displayed. After you examine **errorInfo** global variable information and cannot make sense, report the error to the vendor.

0x1771b157 tcl_s_unixutil_cannot_spec_as_last

Severity: Unknown
Component: tcl/tcl_s_general

Text: can't specify \"%s\" as last word in command

Explanation: Tcl detected an illegal syntax for using a pipeline in a command or redirection in a command.

Action: Check your **Tcl** command and eliminate the illegal syntax for using a pipeline or redirection in a command.

0x1771b163 tcl_s_unixutil_cannot_write_file

Severity: **Component:** tcl/tcl_s_fatal
Unknown

Text: couldn't write file \"%s\": %s

Explanation: **Tcl** could not write a file.

Action: **open** system call failed internally while processing redirection. The reason why the **open** system call failed is also displayed. Check your **Tcl** command to make sure the file you specified exists. After you examined **errorInfo** global variable information, and could not make sense, report the error to the vendor.

0x1771b15a tcl_s_unixutil_cannot_write_file_input

Severity: **Component:** tcl/tcl_s_fatal
Unknown

Text: couldn't write file input for command: %s

Explanation: **Tcl** could not write file with a command with pipeline.

Action: The **write** system call failed internally. Check the permission of a directory your **Tcl** command tried to write a file. The reason why the **write** system call failed is also displayed. After you examine **errorInfo** global variable information and cannot make sense, report the error to the vendor.

0x1771b154 tcl_s_unixutil_err_close_file

Severity: **Component:** tcl/tcl_s_general
Unknown

Text: error closing file \"%s\": \"%s\"

Explanation: **Tcl** detected an error when it tried to close a specified file.

Action: Check other **Tcl** error messages within the **errorInfo** global variable. The reason why the **close** operation failed is also displayed. Based on the information you got, take an appropriate action.

0x1771b153 tcl_s_unixutil_err_read_file

Severity: Unknown
Component: tcl/tcl_s_general

Text: error in reading file \"%s\": \"%s\"

Explanation: Tcl detected an error while reading a specified file.

Action: Check other **Tcl** error messages within the **errorInfo** global variable. The reason why the **read** operation failed is also displayed. Based on the information you got, take an appropriate action.

0x1771b167 tcl_s_unixutil_file_not_open

Severity: Unknown
Component: tcl/tcl_s_general

Text: file \"%s\" isn't open

Explanation: Tcl detected that a file ID passed to the **Tcl_GetOpenFile** routine was not open.

Action: Check **errorInfo** global variable information and figure out where the problem took place, then correct it.

0x1771b169 tcl_s_unixutil_file_not_open_reading

Severity: Unknown
Component: tcl/tcl_s_general

Text: \"%s\" wasn't opened for reading

Explanation: Tcl detected that a file ID passed to the **Tcl_GetOpenFile** routine was not open for reading.

Action: Check **errorInfo** global variable information and figure out where the problem took place, then correct it.

0x1771b168 tcl_s_unixutil_file_not_open_writing

Severity: Unknown
Component: tcl/tcl_s_general

Text: \"%s\" wasn't opened for writing

Explanation: **Tcl** detected that a file ID passed to the **Tcl_GetOpenFile** routine was not open for writing.

Action: Check **errorInfo** global variable information and figure out where the problem took place, then correct it.

0x1771b161 tcl_s_unixutil_forked_proc_useless

Severity: Unknown **Component:** tcl/tcl_s_fatal

Text: forked process couldn't set up input/output\n

Explanation: **Tcl** could not set up a pipe correctly.

Action: The **dup2** system call failed internally. After you examine **errorInfo** global variable information and cannot make sense, report the error to the vendor.

0x1771b156 tcl_s_unixutil_illegal_use_pipeline

Severity: Unknown **Component:** tcl/tcl_s_general

Text: illegal use of | or |& in command

Explanation: **Tcl** detected an illegal pipe usage in a user-specified command.

Action: Check your **Tcl** command. This error was probably caused by an unfinished command line. Correct the **Tcl** command to use a pipeline correctly.

0x1771b158 tcl_s_unixutil_no_command_to_exec

Severity: Unknown **Component:** tcl/tcl_s_general

Text: didn't specify command to execute

Explanation: **Tcl** detected that there was no command to execute with a pipeline.

Action: Check your **Tcl** command, which includes a pipeline, and add a command to execute.

0x1771b151 tcl_s_unixutil_no_read_file

Severity: Unknown **Component:** tcl/tcl_s_general

Text: couldn't read file \"%s\": %s

Explanation: Tcl could not read a specified file.

Action: Check other Tcl error messages within the **errorInfo** global variable. The reason why the **read** operation failed is also displayed. Based on the information you got, take an appropriate action.

0x1771b152 tcl_s_unixutil_no_stat_file

Severity: Unknown
Component: tcl/tcl_s_general

Text: couldn't stat file \"%s\": \"%s\"

Explanation: Tcl could not get the status of a specified file.

Action: Check other Tcl error messages within the **errorInfo** global variable. The reason why the **stat** operation failed is also displayed. Based on the information you got, take an appropriate action.

0x1771b164 tcl_s_unixutil_not_find_to_exec

Severity: Unknown
Component: tcl/tcl_s_fatal

Text: couldn't find \"%s\" to execute\n

Explanation: Tcl could not execute a command specified.

Action: **execvp** system call failed internally. Check your Tcl command to make sure the command exists. After you examined **errorInfo** global variable information, and could not make sense, report the error to the vendor.

0x1771b1a2 tcl_s_wchar_conv_failed

Severity: Unknown
Component: tcl/tcl_s_general

Text: wide character to multi-byte conversion failed

Explanation: Either **wctomb** or **wctombs** routine failed internally.

Action: Check if you set a correct **locale** for your environment. If the locale is the right one, report to a vendor with the error message.

0x177db088 thd_s_internal_error

Severity: Error **Component:** thd/thd_svc_general

Text: A fatal internal error has occurred in DCE Threads.

Explanation: An internal inconsistency in the DCE Threads library has been detected. The threads library dumped core by raising a SIGIOT signal. The application calling the threads library is not at fault.

Action: Contact the vendor from whom the application was obtained.

0x177db081 thd_s_malloc_failure

Severity: Error **Component:** thd/thd_svc_general

Text: A failed malloc of a necessary internal data structure in the DCE Threads library has resulted in the termination of the program

Explanation: Either the users maximum allowed data limit was exceeded or the system paging space was exhausted

Action: Have your system administrator check your maximum allowable memory and the system paging space availability possibly increasing one or both

0x17083075 tty_bad_data_format

Severity: Varies **Component:** sad

Explanation: ?

Action: None required

0x1708307a tty_pwd_gen_req

Severity: Varies **Component:** sad

Text: Password must be generated by password management server (Registry Editor/TTY Interface)

Explanation: ?

Action: None required

0x16c9a0c7 twr_s_not_implemented

Severity: Varies **Component:** rpc

Text: Not implemented

Explanation: An application attempted to execute code not yet implemented.

Action: Check to see that your application uses only the supported protocol sequences. If the problem persists, report to your vendor.

0x16c9a0c5 twr_s_unknown_sa

Severity: Varies **Component:** rpc

Text: Unknown sockaddr

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a0c6 twr_s_unknown_tower

Severity: Varies **Component:** rpc

Text: Unknown tower

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x1460101f utils_s_802_addr_format

Severity: Varies **Component:** lib

Text: Bad format in IEEE 802 address file

Explanation: In `dce_get_802_addr()` the file containing the IEEE 802 address was found to contain a bad format. Note that the method of determining this address is system-dependent.

Action: Examine the file manually to determine if it is correct.

0x1460101e utils_s_802_cant_read

Severity: Varies **Component:** lib

Text: Could not open or read IEEE 802 address file or device

Explanation: In `dce_get_802_addr()` the file or device containing the IEEE 802 address could not be opened or read. Note that the method of determining this address is system-dependent.

Action: The global variable `errno` may indicate what action to take.

0x14601020 utils_s_802_undef_failure

Severity: Varies **Component:** lib

Text: in IEEE 802 address file

Explanation: In `dce_get_802_addr()` the call to `uname()` failed. Note that the method of determining this address is system-dependent.

Action: The global variable `errno` may indicate what action to take.

0x17e43002 uuidgen_st_cantopen

Severity: Varies **Component:** uid

Text: Cannot open file `file`

Explanation: The `uuidgen` command could not open the specified file for writing.\n

Action: Verify that the file name provided on the `-o` option is valid, that you have the appropriate privilege to write into the file, and that the device is not full.

0x17e43001 uuidgen_st_failure

Severity: Varies **Component:** uid

Text: The `func` call failed with the following error:\n**error text**\n

Explanation: The specified DCE function failed.

Action: Take the corrective action as indicated for the specified error text.

0x16c9a088 uuid_s_bad_version

Severity: Varies **Component:** rpc

Text: Bad UUID version

Explanation: An application passed a UUID as input to the RPC runtime but the UUID was unrecognized.

Action: Fix the application.

0x16c9a08e uuid_s_coding_error

Severity: Varies **Component:** rpc

Text: UUID coding error

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a08a uuid_s_getconf_failure

Severity: Varies **Component:** rpc

Text: get_configuration failure

Explanation: The RPC runtime's UUID generator was unable to get hardware interface configuration information.

Action: Make sure the underlying network transport service is working. Try a non-RPC application that uses this service (for example, file transfer or remote login).

0x16c9a08d uuid_s_internal_error

Severity: Varies **Component:** rpc

Text: Internal error

Explanation: An internal error occurred.

Action: Report the error to your vendor.

0x16c9a08f uuid_s_invalid_string_uuid

Severity: Varies **Component:** rpc

Text: Invalid string UUID

Explanation: The contents of the string passed to **uuid_from_string** was not in the valid UUID string format.

Action: Supply a correctly formatted UUID.

0x16c9a08b uuid_s_no_address

Severity: Varies **Component:** rpc

Text: No IEEE 802 hardware address

Explanation: The RPC runtime's UUID generator was unable to get the local system's IEEE 802 address.

Action: Make sure the underlying network transport service is working. Try a non-RPC application that uses this service (for example, file transfer or remote login).

0x16c9a089 uuid_s_socket_failure

Severity: Varies **Component:** rpc

Text: Socket failure

Explanation: The RPC runtime's UUID generator was unable to create a socket it needs in the course of obtaining the local system's IEEE 802 address.

Action: Make sure the underlying network transport service is working. Try a non-RPC application that uses this service (for example, file transfer or remote login).

Appendix A

Message Numbers and Symbolic Names

The table in this appendix provides a cross-reference between the number of a message and its symbolic name. If you have only the message number to go by, look up that number in the following listing to find the symbolic name. You can then look at the table in Appendix B that contains a cross-reference of message texts and symbolic names to find detailed information about the message.

Message Number	Symbolic Name
0x00000000	dce_cf_st_ok
0x00000000	svc_s_ok
0x00000000	msg_s_ok
0x0000ff01	dce_cf_e_no_match
0x0000ff02	dce_cf_e_no_mem
0x0000ff03	dce_cf_e_file_open

Message Number	Symbolic Name
0x10323001	aud_s_dmn_work_dir
0x10323002	aud_s_dmn_starts
0x10323003	aud_s_dmn_trail_name
0x10323004	aud_s_dmn_trail_size
0x10323005	aud_s_dmn_usage
0x10323006	aud_s_dmn_cannot_get_context
0x10323007	aud_s_dmn_cannot_release_context
0x10323008	aud_s_dmn_cannot_get_mp_context
0x10323009	aud_s_dmn_cannot_open_trail
0x1032300a	aud_s_dmn_cannot_open_central_trail

Appendix B

Message Text and Symbolic Names

The table in this appendix provides a cross-reference between the text of a message and its symbolic name. If you have only the text to go by, look up that text in the following listing to find the symbolic name. You can then look in Appendix A, which contains a cross-reference of message numbers and symbolic names, to find the symbolic name.

Message Text	Symbolic Name
()successfully logged in.	KDDS22001-I
Adding %s entry for: %s %dn	pwd_imp_msg_add_entry
Adding %s entry for: %s (generate-UNIX-id)n	pwd_imp_msg_add_entry_gen_unix_id
- Authentication failure	pwd_imp_err_auth
?+* follows nothing	tcl_s_tcregexp_follows_nothing
Import %s: n	pwd_imp_msg_import
*+ operand could be empty	tcl_s_tcregexp_op_can_be_empty

Message Text	Symbolic Name
The group (%s)exists in the registry with this id.n	pwd_imp_err_group_conflict
%-12s Trustee is [%s]	KDDS23200-I
%1\$s	NIDL_NEWUUID
%1\$s requires the %2\$s command line option	NIDL_REQCMDOPT
%1\$sError messages may be incorrect	NIDL_NLSWRONG
%1\$sNLS message catalog version mismatch in "%2\$s", Expected: "%3\$lu", Actual: "%4\$s"	NIDL_NLSCATVER
3077	NIDL_MESSAGE_VERSION
A [%1\$s] parameter must have the [%2\$s] attribute	NIDL_PRMDEPATTR
A address not mapped to object exception has been raised	exc_s_maperr
A bad argument was supplied.	DS_E_BAD_ARGUMENT
A bad stack exception has been raised	exc_s_badstk
A bad system call exception has been raised	exc_s_SIGSYS
A bit field specification can be applied only to simple, integral types	NIDL_BFINTTYPE
A broken pipe exception has been raised	exc_s_SIGPIPE
A call to dce_svc_debug_routing has failed,	GDS_S_DBG_ROUTING_ERR
A call to dce_svc_routing has failed,	GDS_S_ROUTING_ERR
A call to dce_svc_routings has failed,	GDS_S_ROUTINGS_ERR
A call to execv has failed, errno = %d.	GDS_S_EXECV_ERR
A call to fork has failed, errno = %d.	GDS_S_FORK_ERR
A call to select has failed, errno = %d	GDS_S_SELECT_ERR
A call to sigaction/signal has failed, signal = %d, errno = %d	GDS_S_SIGHDL_ERR
A call to system has failed, errno = %d.	GDS_S_SYSTEM_ERR

Message Text	Symbolic Name
A call to wait has failed, errno = %d.	GDS_S_WAIT_ERR
A C-ISAM File could not be locked, iserrno = %d.	GDS_S_ISLOCK_ERR
A C-ISAM-index could not be added, iserrno = %d.	GDS_S_ISADDINDEX_ERR
A client side context handle has been incorrectly modified	rpc_s_ss_context_damaged
A command is required for trapping signals.	dcp_s_signal_trap_req_cmd
A command may not be specified for the '%s' action.	dcp_s_signal_takes_no_cmd
A communication error has occurred.	DS_E_COMMUNICATIONS_PROBLEM
A conformant field must be the last field in the structure	NIDL_CFMFTFLDLAST
A conformant [v1_array] must also be varying	NIDL_SMALLCFMT
A co-processor exception has been raised	exc_s_coproc
A copy of the root directory not found in clearinghouse %s.	cds_s_server_rootlostevent
A CPU-time limit exception has been raised	exc_s_excpu
A credential cache entry could not be established.	gssdce_s_couldnt_get_mech_cred
A [cs_rtag] parameter must precede any [out] [cs_char] data in a parameter list	NIDL_TAGAFTDATA
A [cs_stag] parameter must precede any [in] [cs_char] data in a parameter list	NIDL_TAGBEFDATA
A current stack was not allocated by thread library exception has been raised	cma_s_notcmastack
A [cxx_new] operation must return an interface pointer	NIDL_CONSTRUCTOR
A database inconsistency was detected.	GDS_S_DB_INCONSISTENT
A 'dced' name missing object name.	dcp_s_dhd_miss_objname

Message Text	Symbolic Name
A decimal point overflow exception has been raised	exc_s_decovf
A DSA detected a loop within the directory.	DS_E_LOOPED_DETECTED
A failed malloc of a necessary internal data structure in the DCE Threads library has resulted in the termination of the program	thd_s_malloc_failure
A fatal internal error has occurred in DCE Threads.	cma_s_bugcheck
A fatal internal error has occurred in DCE Threads.	thd_s_internal_error
A File size limit exception has been raised	exc_s_exfilsiz
A [first_is] variable must be a small, short, or long integer	NIDL_FIRSTYPEINT
A floating point divide by zero exception has been raised	exc_s_fltdiv
