Do you support DCE and DFS applications?

Whether you are looking to maintain, extend, or migrate your DCE/DFS applications, Entegrity offers the products and support you need.

ENTEGRITY DCE/DFS PRODUCT LINE

DCE Runtime Consists of runtime libraries, daemon binaries, administrative tools and online documentation. Required for each DCE client machine.

DCE Security Server Provides user and application authentication and authorization. At least one DCE Security Server required to configure a DCE cell. An additional server kit is required for each desired replica. The recommended minimum for any cell is two servers (to support fail-over).

DCE Security Server Active Directory® Extension
Extends the DCE Security Server to enable single sign-on between an existing DCE cell and a Windows Active Directory domain.

DCE Cell Directory Server (CDS) Stores and maintains object names within a cell and handles requests to create, modify, and look up data. At least one Entegrity DCE CDS is required to configure a DCE cell. An additional server kit is required for each desired replica. The recommended minimum for any cell is two servers (to support fail-over).

DCE ADK Includes the IDL compiler, as well as header files and libraries necessary to compile DCE applications. Required for any site that intends to develop DCE applications. Once development is complete, a runtime kit is required for each machine that will run a component of the DCE application.

DFS Client Consists of runtime libraries, cache management and online documentation. Required for each machine that will be a DFS client. DCE is a prerequisite.

DFS Server The DFS Server allows users to share files stored on computers in a network as easily as files stored on a local machine. DCE is a prerequisite.

DCE BRIDGING

AssureBridges is a suite of products that enables you to leverage and extend your investment in DCE applications by allowing non-DCE users to securely connect to your applications via the Web.

Extend Your Investment Bridge technology enables organizations to leverage investments in DCE applications by extending:

Reach Securely extend access to your DCE applications to partners, customers, and other portal or extranet users via the Web.

Scope Extend the scope of your DCE applications across departmental and/or divisional boundaries without having to extend the entire network infrastructure by cost-effectively using Web access control and authorization technologies.

Functionality Provide secure access to DCE applications that have been extended with new services build in Java and Web technologies.

How It Works AssureBridges consists of two components: AssureAccess and the DCE URC.

AssureAccess AssureAccess is Entegrity's solution for authentication, single sign-on, authorization, and audit services for eBusiness, Portal, and J2EE environments. AssureAccess provides out-of-the-box support for standard LDAP and JDBC-accessible user stores.

DCE URC The DCE URC is a User Repository Connector built specifically for accessing DCE user stores. No modifications to your DCE applications are necessary to provide secure Web access to DCE users. Install and configure AssureAccess for your Web access control points, and set up the DCE URC to enable those Web users to securely access your DCE applications.

ENTEGRITY DCE/DFS SERVICES

Professional Services Specialized consulting and product services range from evaluation support and product implementation to integration services. We use tried and tested formal approaches for each program to ensure that all aspects of each project are covered.

Support Services Entegrity Solutions provides online Web support for DCE and DFS products that customers can access without usernames or passwords, 24 hours a day. Free initial 30-day support, provided with every product, covers telephone and e-mail support for installation, licensing, and configuration. After the initial 30-day support, you can purchase Standard, Extended, and Premier annual maintenance plans that provide telephone and e-mail support at different levels of coverage to suit your needs.

Training Services Custom training workshops enable you to use Entegrity DCE and DFS products to their best effect while minimizing your learning curve. Each training workshop is run by one of our experienced consultants who will provide you with precisely the skills you need to deploy, manage and develop with our products.

INFORMATION FOR DCE/DFS ON TRU64 UNIX

HP customers can purchase product updates and support directly from Entegrity for the DCE and DFS for Tru64 UNIX. HP has phased out Compaq part numbers that are specific to DCE/DFS for Tru64 UNIX products, as well as support contracts. DCE and DFS products for Tru64 UNIX are no longer orderable from HP. HP customers who wish to purchase products, support, or updates of DCE and DFS for their Tru64 UNIX should contact Entegrity directly.

INFORMATION FOR DCE/DFS ON AIX OR SOLARIS

IBM has announced it will end support for DCE on AIX and Solaris. IBM customers running DCE/DFS on AIX or Solaris who wish to continue supporting those applications can do so. If you are not prepared to replace your entire DCE/DFS infrastructure, you can migrate your operating system to Linux and keep your DCE/DFS applications running. To learn more about this alternative, contact Entegrity.
